Hey Mopar, I've got a few lying around. E mail
me with what you want and I might consider donating
to the cause.

NEW TRIDENT TRX-200 SCANNER *NO GAPS*
TRX-200 is a wide band 100 KHz - 2149 MHz scanner with 40 channels
band scope and is capable to receive all modes such as AM, NFM, WFM, LSB,
USB, CW with inverted audio scrambler decoder built-in.

Comes with antenna, NI-CD batteries (4), AC adapter and English manual

Please check it out!

Hi All

I have a 89 f-150 pickup with daul antenna's mounted on the side mirror's I don't think the antenna;s are grounded right ...the antenna's work but they are high when I check them for swr ...when I am checking them for swr and I grab the antenna's my swr reading will drop quite abit is this because I am acting as a better ground than the mirror's are giveing me..?? and if so.....is the best way to ground my antenna's is to run a copper wire from my mirror and then bolt the copper wire to the side of my truck for better ground.....

any ideas would be great....

zeek.....

How about these Sweet 16 amps. How do they stack up to Heathkit and others. Im setting up a moonraker 4 about 50 ft in the air. I want something so I can do some serious dxing. One guy was telling me about a Thunderbolt 350 how are they. I appreciate all you guys helping me out. I'm really appreciate you letting me glean from your knowledge. rp

If you want to do some 'serious DX'ing', I would highly recommend that you look into operating on Sideband. With a Moonraker 4 antenna and SSB, you would only need a FRACTION of the wattage that a Sweet 16 puts out to be 'worldwide'. I'd say maybe 300-500 watts PEP. But of course, talking beyond 155.3 miles will get the radio Nazi...er...Aaron on you case!

Yes it is, that's why it's called "theoretical".

>the tube spend less time in it's linear region.

Which defeats the purpose of running Class A in the first place.

If there is one constant in this universe, it's that things don't always happen according to expectations.

>In any case, to get rid of the feedline radiation, you will need to

>of extra coax to work with.

The choke was there in the first place; in fact, it is better than a choke since the coax is run inside steel pipe. I don't know why adding their "ground plane" makes it worse, but it's not the feedline. My first guess (and it's only a guess) is that the attachment makes the antenna electrically asymetrical. If I was worried about it I would check into it further, but the easy solution is to leave it off.

...

1. Dx'ing is illegal, inmoral and just plain ol' a no-no on 11
meters... outside of that.... I'd get something with a tube like a
al-80B (ameritron) or a AL-1200 if you want to run 220VDC in the
shack.... the 4cx1200 is a very rugged tube, and will not go POOF, if
you screw up in tuning... you wil, however have to retune the input on
10 meters....

Amps? AMPS? We don't need no stinking amps!

Skip is either there or it isn't. When it's there, all you need is a
few watts. When it isn't, even 10,000 watts isn't going to get you
there any better. If you REALLY want to get serious about DXing,
forget the amp and sink your money into some serious antenna. Another
good idea would be an audio processor, and you can even use your
computer and soundcard for that. Also, load up your coax with some
ferrite at both ends -- it really does make a difference when you have
an unbalanced feedline. And high-quality coax is a must!

That's the way I did it a few years back in a President Jackson. 35 watts was the power output, and it ran cool as a cucumber.

The moonraker has enough gain to provide excellent DX capability w/o the use
of a external signal amplifier.
People like you are part of the problem.....not part of the solution.
Try working within the boundaries set forth by the FCC, they specify maximum
ratings for PEP but nothing governing ERP.
Use your head man, build a high-gain system using a moonraker or two or
four.
You will have more Effective Radiated Power than you know what to do with.
A 4watt carrier into a antenna with 20db of gain will give you 400watts of
effective
radiated power.
A 25watt carrier will give you 2500watts ERP with the same antenna,
so tell me now which is better....a high-gain antenna or a highly illegal
amplifier.
Keep in mind that a amplifier also creates highly undesirable harmonics that
will
surely cause troubles with the neighbors, whereas the signal from a quality
Transmitter
fed thru some 9913 into the array would be cleaner and more understandable.

Hey Zeek, nice to see you back again.
The mirrors don't contain enough metal to provide a suitable ground plane
and running a supplemental path via braided copper probably won't suffice
because
current ALWAYS follows the path of least resistance.
I think you're pushing the envelope tryin to co-phase 1/4~ radiators on the
p/u.
The only reason they work on big trucks is the 9ft. spacing, you can't come
close
on that p/u.
Give it up and mount a 9ft. whip or KW7 in the middle behind the cab and you
will be much happier, co-phased antennas split the available power between
themselves
so if you don't p/u the 3db gain which properly co-phased antennas provide
then
you're losing the ERP battle before it even starts.

32. Need help buying a CB

Newsgroup: rec.radio.cb
Date: 2002-10-01 13:42:17 UTC
From: Tom Allen <toma@allencg.com>
Message-ID: <3D99A5F1.7477E1EA@earthlink.net>
Source record: 138812

I haven't owned or used a cb radio for probably 20 years. I'm planning a long road trip in a month and was considering buying a new cb. I want the cb for road and radar information.

I'm hoping for some pointers to help me with my buying decision. I don't want to permanently install the unit in my car, I just want to use it for this one trip and will probably keep the whole thing in my trunk or in the garage. For this trip, I'll just set it on my console and plug it into my cigarette lighter.

Questions:

Do hand-held units work well from inside a car? This would be a great alternative, no antenna, sits on the passenger seat, put it away when I'm done. But do they have a range of 30 feet?

Have antennas changed over the years and gotten much smaller or are they still the 2 to 3 foot long whips they used to be with the big magnet on the base?

How about the units with the entire radio in the handset like the Cobra 75 WXST? How do these things install?

Bells and whistles are not a concern, I need volume, squelch and channel indicator.

Thanks for whatever advice or URL's you can provide.

-
Just post the URL.
Ii's been awhile since I've heard you, back around the time of your local radio wars about two years ago or so. You guys still playing that game? I have an interesting set-up I wouldn't mind bringing to your neighborhood if you guys are still radio active,,,,maybe sit on the Gandy flats and key it up with y'all and make some noise for awhile. I fish the bay quite often and usually have a radio with me. You still playing the FM Pirate thing? Seems like we're losing good pirate stations left and right and getting a bunch of temporary curious Ramsey folks that don't stay with it and play bad music, or worse, poor commentary.
Take it easy down that way, neighbor.

Really nice capacitor bank with board and eq resistors already
mounted.
It has the screw type filter capacitors. They are mounted on a
commercial made PC board with eq. resistors. It consist of 15 -
1500mfd @ 450vdc
computer grade capacitors in series. There is room for one more cap,
of
which I have a couple of spares 17 total caps. There are also some
extra resistors mounted on the board you could use to add the last
one.
That would give 93 mf at 7200wvdc. That is nothing to sneeze at! Most
of the HARD work is already done for you.
Great for your next high powered project. It will fit in a standard
19" rackmount chassis it is 6" tall 9 3/4" depth
Figure about 25lbs packed weight shipped from 28681 would like 100.00
+ shipping open to offers I could use 2 oil capacitors around 20mfd @
5000vdc each Ok if cap is higher.ni4l@charter.net

theres a situation called a "crowded band" that shoots that theory all to hell. your right if you can find a silent spot on the band but during any opening that would allow a few watts to be worldwide is sure as hell going to be the same opening that has the band filled wall to wall with people. your best bet running low power and working world wide is 26.000-26.300 on usb because its not crowded at all down there and its filled with europeans at the right time of day. i did enjoy working a guy in gernamy for a while the other day on 26.545 am while only running 6 watts carrier out of a barefoot 2510 so that was alot of fun but had there been any noise level at all it would not have been possible

The all in one from Cobra is probably a good choice from your description. As far as the antenna goes the bigger the better usually. At 27MHZ or the CB band an electrical quarter wave is 9 feet. Since this is not always practical loading a cb antenna was an alternative. I would not buy an antenna less than 3 feet long. The SWRs are usually to high. This is the standing wave ratio. It has to do with how much power is being radiated down the antenna once it goes up the antenna the first time. I could get a little more technical but see no reason. There are still many companies making good base loaded antennas, the load is near the mount of the antenna. I think Hustler makes a base loaded and center loaded antenna that is good. K40 makes a fine antenna, Wilson has the 500, 1000, 5000, and the little wil, and Antenna Specialists makes the Big Momma antenna. I believe the Wilson 5000 to be the best, but they run around 70-120 dollars. The Wilson 1000 is another good choice and I have seen them for around 50-85 dollars depending on the mount. The K40 can be had for 45-65 dollars and is a good choice if you won't be running much power into it. In a perfect world all cbs would put out the same amount of power so the antenna is very important.

Good luck and if I can be of any further help please let me know.

news:gQ2m9.1453$lV3.124979@newsread1.prod.itd.earthlink.net...
> Question, why do you think trucks replaced trains for freight movement and
> delivery?

It was a question of mentality. For 90 years or so, the railroads had been used to laying down
tracks and saying "OK, here's yer freight (team track)--come and git it". Most of the managers
came from the respective armies of the Civil War during and after Reconstruction, so there was (and still is) a military mentality and atmosphere--an inflexible, hidebound way of doing things be-
cause of that thinking and partly tradition--"We always done it thataway, and that's the way we
are gonna do it. Small shipments (Railway Express) DID cause extra handling in that it had to
be unloaded, separated, put onto delivery trucks and delivered. Starting in the 1950s, the RRs
began to "run off" the small shippers in favor of bulk loads. Same way with passenger traffic; the
Class I roads wanted to handle strictly full carloads.

Times do change and many of the old heads who grew up in the militaristic atmostphere of the
steam roads retired and new people began to take charge. These people didn't start out on a
track gang or a train crew. These people came from universities, law schools, full of ideas, vim
and "vigah", ready to change things and marched right into the board rooms and office towers.
They trimmed fat, cut unprofitable routes and looked for ways to modernize and become flexible
to meet ever changing markets. The customer became "king". Customers like Ford Motor Co.
told the roads hauling their cars, you will do things THIS way or else. The roads responded with
an "Aye, aye, sir", and built cars such as the RoadRailers to meet demands for just-in-time inven-
tory. They made agreements for run-thru trains where the train remained intact with no changes
in engines or switching, only stopping long enough to change crews. Often the whole process
takes about 20 minutes--no longer than it takes a trucker to stop for a bathroom break. That is
why you will see a Union Pacific train with a Norfolk Southern engine(s), or

Conrail units--even on
regular trains. Thus, a RoadRailer (NS calls it "Triple Crown Service") can
leave a parts plant in
Atlanta at 5-6 PM, and be at a Ford plant in Michigan the next day (I'm not
sure of the exact
schedule--I've been out of the game for 2 years). The plant saves money on
warehousing, they
get their parts in time for the next couple days' run, and everybody's
happy. The "warehouse" is
the trailers since they are enroute instead of the parts sitting in some
building where the company
has to pay tax on it.

The RRs are much more flexible than in the past, and can better meet
challenges that they may not
have previously. The concept of shorter, dedicated trains--even for
vegetables and fruits--with
2 man crews, no "dead weight" cabooses combined with run-thrus can pretty
much compete with
trucks IF, say, there were a strike. One of my jobs in the early days of my
career was checking
FGE reefers in the yards to see that the temps were below 40F and that the
engines were running,
etc. Contrary to popular belief, "reefers" can get across country LOTS
faster than you think.

The reason the status quo is the way it is, that once that LCL business went
truck, momentum
and customers' memory of the way RRs acted in the past have kept it that
way. However, if
trucks just shut down and said, "Hey, get yer lettuce to South Carolina
without us", you might be
surprised at how quickly people can improvise, innovate, and come up with
solutions. That's what
makes us Americans sort of unique; we don't just sit down and resign to our
would-be fate. The
truth is that trains are MUCH more economical over the long haul, and trucks
are best at the ends.
I hope that helps.

>Use your head man, build a high-gain system using a moonraker or two or
>four.

"Use your head man" ....Who in their right mind would stack
two or four Moonrakers?

>You will have more Effective Radiated Power than you know what to do with.
>A 4watt carrier into a antenna with 20db of gain will give you 400watts of
>effective radiated power.
>A 25watt carrier will give you 2500watts ERP with the same antenna,
>so tell me now which is better....a high-gain antenna or a highly illegal
>amplifier.

Just what CB antenna/antennas are you using to get 20db gain? Can
you name one person that has a 20 db gain CB antenna configuration?

I can't.............but there are plenty of 20db gain amplifiers that
will accomplish the same ERP that you are suggesting. You did
suggest 400 watts as being a legit ERP didn't you?

"Use your head man" Why attempt to get an impossible 20 db gain CB
antenna when all you have to really do is to hook up a amp? No guy
wires needed.

Hello,
These mics are from a deceased friend of mine.The prices include
shipping via USPS to the lower 48 states only.Here is my List

D104 G stand no mic wire $17
d104 4 wire wired for cobra 4 pin chicken choker only $25
D104 with side and push bar untested $25
And a silver eagle that is took completely apart needs bottom cover
screws and mic wire $20

Will take $80 dollars if you buy all of them and throw in a small box
of parts for free with buying them all.If interested or to make offers
e-mail me at

kc8fwd@hotmail.com

Thanks Mike

VHF Radiobuff asked:
As you can see, the FCC only requires a current MAILING address, not a
physical address. Hams providing a completely false address can
obviously be penalized. Why are we worrying about this on the CB
newsgroup in the first place? <

Just curious, as a few hammies that are on this ng obviously have many
things to hide.
-
>Very True Twitsy, Richard Cranium is the first who comes to mind.<<

Actually, he isn't. As if we weren't already clued in, helpful "Aaron"
made us aware of the ones constantly seeking to jack off the cbers in
the group with this little gem:

"If you got rid of me, you'd still have Sparky, Leland, George, Doug,
Dave Hall, and many others to contend with. -A

The hammie community looks upon thee as blights,,,canker sores of the
community, the bottom of the feeders. Unfortunately, the above line
written by "Aaron" proved to be profoundly prophetic, as did KC8LDO
Lelnad's threats to have Dogie porn-spam the group.
Delusions of grandeur and artificially inflated self-worth is apparent
in the statement above written by "Aaron", for he feels that others must
somehow "contend" with an imaginary scenario only he can see. This
magnificent display of a defeated, deflated, and wounded ego is backed
by his naming of a posse.
The concept would be hilarious, instead it is
frightfully pathetic,..,,indicative of what plagues hammie radio.

Hey there, Georgy girl
Swingin' down the street so fancy-free
Nobody you meet could ever see the loneliness there - inside you Hey there, Georgy girl
Why do all the boys just pass you by?
Could it be you just don't try or is it the clothes you wear?
You're always window shopping but never stopping to buy So shed those dowdy feathers and fly - a little bit
Hey there, Georgy girl
There's another Georgy deep inside
Bring out all the love you hide and, oh, what a change there'd be The world would see a new Georgy girl.

>Steve I am actually touched by that. Thank You<

What is this? AM Gold requests and dedications?

Class A just means it draws plate current for the full
cycle of the input signal, it does not mean it's linear!

A theoretical analysis must still follow the natural laws
of physics, and
the commonly known limitations of any devices used in that
analysis must be
considered as a part of the analysis if those limitations
could possibly
have any 'significant' impact on the results.

'significant' normally being greater than 1 percent unless
otherwise agreed
upon.

Any analysis that breaks those rules goes beyond the
theoretical and into
the imaginary.

The tube in your analysis was not theoretical, it was
imaginary.

If you would have chosen a solid state device you would
have been within
the realm of the theoretical because the 1 volt or less of
saturated drop
across the transistor would not have had any 'significant'
impact on your
calculations relative to the hundreds of volts used in the
calculations.

(1 volt or less / 180 volts = .56% or less)

> > The only way to increase efficiency in a class A amplifier is to make
> >the tube spend less time in it's linear region.
>
> Which defeats the purpose of running Class A in the first place.

Yep!

Which is probably why those old push-pull circuits using
tubes biased
slightly above the knee of their conduction curve and with
screen taps
placed in exactly the right places on output transformers
(The old
Williamson 'ultra-linear' Circuit) became so darned popular
with all the
audiophiles!

Regards,

Dennis O.

Get a Uniden PRO-510XL or PRO-520XL. Just the features you want, and loud audio for a temp "on the car seat" install. Use a good antenna on their magnet mount - Wilson or K-40.

Not entirely true... it depends on what output levels you want from a given system. Let's take a class A amp that is putting out 100W. It has to be biased at the proper point to acheive class A, right. Let's arbitrarily set the plate current for this scenario at 100ma. Now, let's lower the output of the amp (by changing drive) to say 1W. Now, the class A bias point far exceeds what is necessary to stay in class A for this output. The plate current can be dropped significantly in that same amplifier from the previous level and still maintain class A operation. Incidently, as you know... the efficientcy also changed radically from the bias point needed for 100W class A and 1W class A.

74. Profile of typical antikeyclown

Newsgroup: rec.radio.cb
Date: 2002-10-02 00:05:15 UTC
From: witchdoc@attbi.com
Message-ID: <3aed93cc.0210011605.2b613f65@posting.google.com>
Source record: 138854
Cross-posted to: rec.radio.cb,alt.radio.pirate

The typical antikeyclown:

--was constantly picked on or bullied as a boy (almost all are white dudes)

--comes from a reasonably well-off middle-class background

--is deeply jealous of others who appear happier than he is

--has little or no sense of humor

--is most likely to endorse conservative politicians, even very unpopular ones

--is probably religious, or at least enjoys the God-man/superiority-inferiority aspect of religion

--blames his mistakes on others whom he thinks have deceived him, or hides his mistakes

--has likely made at least one attempt to join a law enforcement agency or law office, but felt devastated upon being rejected

--does not drink, smoke, or use dope, and probably never has

--obsesses about the legality of any number of issues, to the point where it interferes with his job or family life

--feels holier-than-thou when his views alienate people around him

--pretends to agree completely with other, like-minded individuals, but in fact he really wouldn't get along with them at all

--feels that too much freedom would lead to people (including himself) acting like kids in a candy store

If this doesn't describe our antikeyclowns (LOL, watch 'em try to pretend I missed by a long shot---like I'll buy THAT), go and bug Robert Ressler about it... it's HIS profiling process.

> Hello All! What does the group think of these amps,

Big and kind of disappointing when it comes to output
for all the expense and trouble. An amp with four of
the 572Bs or two of the 3-500Zs is ultimately more
satisfying than the ones that have two 572Bs or one
3-500Z. The smaller amps are like starter homes; they
get you by, but you're not really satisfied.

is it usable on 11
> meters?

Yes, but it requires 100 or so peak watts of drive.
It dosn't have an RF sensing keying circuit, so you
have to deal with that too. Thirdly, it'll work a lot
better if you can supply it with 220 VAC. Also
keep in mind that those amps are old. It's best
if you can find one that has new power supply
parts and tubes. Hopefully the fans were lubed
once in awhile too.

Is it pretty clean as far as RF output is concerned?

Yes, as long as the input signal is clean and you
don't overdrive it. About 600 peak on 110 and 700
on 220 is what a good one will do cleanly.

rp

So I'm in the market for a new mobile CB radio. I had one in my old car but it was a big bulky trucker style CB from RadioShack (TRC-446?). Now that I have a nice new sleek car I'm looking for a CB to match. Here's what I need:

1) fairly simple, cheap (but I am a sucker for bells and whistles :)
2) PA function (the higher the wattage the better :)
3) no larger than 6 15/16 inches wide by 1 1/2 inches tall

(the RadioShack mini mobile one would fit perfectly but it doesn't have PA! http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=CTLG%5F001%5F002%5F004%5F000&product%5Fid=21%2D1703)

4) preferably black

Another question, do the adapters that allow you to use your car radio antenna work at all? My car has an antenna integrated into the rear window, is this a problem?

(like this: http://jcwhitney.com/product.jhtml?CATID=4967&BQ=jcw2)

I don't want a big ugly antenna. I won't be using the CB function a lot, and when I am it will most likely be talking to my friends around town.

Thanks for the help!

Tom

Hi Jamey, My name is Woody Parr and I'm up the road in Cornelia. I'm afraid that I'm indirectly responsible for this troll who is badmouthing you at alt.religion.urantiabook. You see he was only there in the first place to attack me.

This idiot is Steven J. Rogovich, 1612 Lake Christopher dr. Virginia Beach, Va. 23464 He followed me to the UB usenet page from alt.radio.pirate He and I (were) both formerly loosely associated with each other in the shortwave pirate radio listening hobby. I USED to be a shortwave pirate but my station has been permanently retired for more than 2 years now. Stevie is still a pirate and is the operator of the station Radio Free Speech. He is also the moderator of a message board at the Free Radio Network < www.frn.net > and goes by the handle of Pat Murphy there. I had a falling out with the people at the FRN a couple of years ago as they became corrupt and were doing so inappropriate things. I dared to open my mouth and openly complain about there stupid activities which since they havn't yet ceased to follow me around the internet anywhere they can and attack me.

Steve is also on the usenet trolling people under the name of Richard Cranium (richardcranus@yahoo.com) He's far too much of a coward to debate anyone using his real name.

After reading only a few paragraphs I could see where that was heading.
Where exactly are these "Thousands of low power" radio stations spoken of?
As it stands currently, in order to be a legal radio station operating
within the standard broadcast bands, any station must be regulated and
licensed.
Regardless of power, it must also have a licensed technician to oversee it's
operation.
It must also meet the same stringent requirements as it's "big brother"
counterpart.

Just for the fun of it, as I held a 2nd class FCC tech license at the time,
I was the chief engineer at the local high school radio station. No bigee.
Just put in an appearance every now and then and made sure the kids were
keeping the station operating legal. Mind you, these were no dumbass kids
either. Our electronics teacher taught at college level. So all I did was
make a few routine checks.

To allow these kinds of stations to operate on a "self regulatory" position,
is like allowing airplane pilots to determine where and how they fly jumbo
jets with no one watching them at all.

Then, if we allow that, we may as well allow any radio operator to do as he
damn well pleases.
Rules are rules. They are there for a distinct purpose.
If you don't want to play by the rules, then don't play at all.

> >
>
> Did you just say that you can't use AM with a 50% efficient amp?

Hi Bill.

From what I see, he is not saying that the amp is "too efficient"... just that the maximum efficiency cannot be obtained with an AM signal.

As much as I hate to do this... I have to agree.

The class "A" amp is biased to the centre of the linear part of its curve. The mamximum possible efficiency of a class "A" amp(50%) can only be achieved when the output is being driven between B+ and GND.
If you set the drive level for max swing (for 50% efficiency) with a dead carrier, any audio will take the amp beyond it's maximum (overdrive it) and so cause distortion. If you set it to give maximum swing during the peaks of the AM signal, then it will not be at it's max at any other time... so efficiency will be less than 50%.
Although the maximum possible efficiency of the amp is 50%, the actual efficiency obtained is dependant upon the level of drive and output. Any signal where the RF level varies with the modulation cannot achieve maximum efficiency without overdriving when modulated.

Now, if you want to put an FM signal through it, the output level is constant, so you could set it to give that mamimum swing (B+ to GND) on a dead carrier and obtain that "magic" 50% efficiency... although I would not recommend running it like that.

Regards,

Peter.

You can go to radio shack and spend about $50 and get a compact radio and antenna for the purpose that you want to use it.

The handhelds aren't bad, but you will not receive nor transmit very far. An external antenna(mag mount) will get you further down the road than the handheld.

Well first off the URL is...

www.geocities.com/coolaidcb13

I assume i'm not really involved in any radio wars. There are a few characters out here that I don't appreciate, but for the most part everything is calm. There've been so many CB wars here in St. Pete though, I don't know which you'd be refering to hahaha. But yea, we're still radio active, I'm not on as much as I used to be, but I still jump on there. I haven't done the pirate FM thing in years... but I did run across my old Ramsey FM-25 the other day... gotta set that up sometime again.

>Well first off the URL is...
www.geocities.com/coolaidcb13
I assume i'm not really involved in any radio wars. There are a few characters out here that I don't appreciate, but for the most part everything is calm. There've been so many CB wars here in St. Pete though, I don't know which you'd be refering to hahaha. But yea, we're still radio active, I'm not on as much as I used to be, but I still jump on there. I haven't done the pirate FM thing in years... but I did run across my old Ramsey FM-25 the other day... gotta set that up sometime again.
Seeya<<

What channel you on now? Is it still 12 or 13? (I can't remember which channel y'all were on). I'll give a listen for ya' this weekend..maybe we can wave a hand....I'll try Fri or Sat night! C'ya!

Another underground and disgruntled nocode hammie wrote:

>To allow these kinds of stations to operate on a "self regulatory" position, is like allowing airplane pilots to determine where and how they fly jumbo jets with no one watching them at all. <<

Riiiiiiight! This analogy secures your intellect quite nicely. Another tangible (airplane crash) scenario that can and has killed thousands compared with broadcasting out of band or with a little too much power.....now try another news server.

>Then, if we<<

You were never part of the law process, nor can you have anything to do with what is allowed or permitted on the air. That negates your improper use of the word "we".

> allow that, we may as well allow any radio operator to do as he damn well pleases.<<

You have no alternative. "We" (meaning cbers and freebanders) operate as "we damn well please". Lucky for you unsettled hammies we have good operating technique and are not as full of malice as you, otherwise, people like you may never be able to use their equipment.

>Rules are rules. They are there for a distinct purpose. If you don't want to play by the rules, then don't play at all.<<

Can't have it both ways. The trouble posse that Aaron continues to call by name have all lost access to the group for breaking rules. These folks never could obey any rules..they think rules are for others to follow..thanks for reminding us of their hypocrisy and lies.

Wrong. The FCC has carte blanche authority to regulate any and all radio operations within the United States, and it's possessions, without restrictions of any kinds.
What has been stated on that site is nothing new. This crap has been floating around since the '70's at least.
As there are literally thousands of radio stations that are NOT involved in interstate trade, why do you presume that the FCC can not regulate these stations?
Before a radio station can operate legally, it has to have a license.
Even for testing purposes it has to have a license.
Which is why every radio and tv station has a call sign.
Which is why ham radio operators have call signs.

The FCC gave up on trying to control CB simply because of it's ease of use and popularity.
They literally ran out of call signs for CB'ers back in the 80's or so.
I've been working with CB radios since the mid 60's. I'm not some kid who just started with it.

Because the FCC has and will continue to bust pirates, it is as
simple as that. The radio pirates have been putting this BS spin
on that for years and it doesn't work.

> know... the efficientcy also changed radically from the bias point needed
> for 100W class A and 1W class A.

Prof.,

Efficiency is power out over power in.

Using the 25% to 35% efficiency numbers for class A
operation:

To get 100 watts out of a class A amplifier you would need
300 to 400 watts of plate input power.

Efficiency = 100 watts output / 400 watts input = 25%

By the definition of class A = The Input power remains the
same at all times in a class A circuit

Any change from the quiescent input power level would be an
indication of non-linearity.

At 25% efficiency, the plate voltage would have to be =
400 watts / 100 MA = 4000VDC

(That would require the use of a 4-400A or similar tube to
run that high of a plate voltage with a 400 watt quiescent
plate dissipation)

Now reduce the plate current to 10MA, the input power is
4000VDC X 10MA = 40 watts

Power output was reduced to 1 watt.

Efficiency = 1 watt output / 40 watts input = 2.5%

If you take this scenario to the limit and lower your power
level to where you do not have any power out, your
efficiency will be ZERO, no matter where your quiescent bias

point (and resultant plate current) is set!

Regards,

Dennis O.

And they do, indeed, have jurisdiction over radio via the Communications Act
of 1934, passed by
Congress, elected by the people. If you would like to test their authority,
go ahead. It's been tried
before. It seems that those who chafe the most under Federal authority are
the ones who LEAST
deserve or have a legitimate use of radio. To throw open the gates to
anyone without standards,
rules, and guidelines of conduct would set communications back to around
1910. It is those like
Mr. Craig who advocate this who show just how stupid and ignorant of the
characteristics of radio
they truly are.

Oh how desparately the unknowing will try to find a way to wiggle out of the
FCC's authority.
Thank God there IS some control, for if you had it the way you want it, even
YOU wouldn't be
able to communicate; radio would be rendered utterly useless--especially in
today's "ME" gener-
ation. It would degenerate into an electronic "Darwinism", nothing more
than howls and squeals,
racket. You can discount it all you like, but people would DIE because of
it. Yeah, I know the
spin--I've heard it before, but without those controls and the authority of
a unified code, your
enjoyment of radio would be reduced to frustration. Once controls were
removed, how long would it be before the international aviation controllers
on 6 MHZ would hear, "How 'boucha
thar, mercy me, gre't day thar, duh, yuh got an ole copy thar on this h'yar
OOOONNNNNEEE
Texas Tweety Bird, thar, gr'et day, shore 'nuff thar, git back 'ere, duh,
go'rd ahaid thar, SQUEAK"! Or a flight from France prevented from obtaining
landing instructions because of some
yokel saying "AAAAAUUUUUUU-DEEEEEEEEEEE-OOOOOOOOOOO (echo, echo,echo, echo
ad nauseum)"? The outlaw operators already want "extree channels thar",
just
how many "extree channels" would they require if there were no protections
for OTHER users of
radio? Hmmmmmmmm?

The FCC rules are valid, reasonable, and necessary. The condition the
outlaws and bandits so
eagerly want has existed before; it didn't work then, it wouldn't work now.
Why don't you try not
paying your Federal taxes? People have written garbage like on that webpage
about radio AND
how not to pay taxes before, too. Try either caper and see what happens.

Jerry
<<

That's blind faith, Jer. Nuthin', and I mean NOTHING is reasonable, valid, or necessary concerning the DX law as it now stands.
A coin always has two sides. You can regurgitate and echo everything the feds claim concerning their reason for keeping the DX law as it is, it doesn't make it right.

To wit: One still is not allowed to use a cell phone while on an airplane. The reasons the FEDS give us are exactly the same as yours...something MAY interfere with flight navigation. Now, everyone knows this is bulllshit, even the feds. 9/11 callers from the planes disproved this myth once and for all. Roll on over to an aviational forum and ask a pilot...many of them routinely use cell phones. The pilots flying the banner and sightseeing planes on the beaches are cell equipped and have used them since their mass introduction. Are these little cessnas and piper cubs safer than commercial airliners? What really is happening is the airlines want you to use THEIR phones and pay their rates. A strong enough lobby and guess what?
Hammies were the only party lobbying against the DX rule when it was reconsidered. The hammies won and got their wish, but so what? We're still DXing and the law is still wrong.

By all your accounts, I am an "outlaw" and a "bandit", yet you know nothing of what "I" want as you allude above. I said it before and I'll say it again, I kind of like the law the way it is....the feds know who to go after and it ain't simple DXers on the freeband...it's the trouble-causing hammies and those who are a serious threat...NOT simple freebanders DXing.

As far as not paying taxes, its standard fare for large corporations, illegal immigrants and those that work under the table for whatever reason. Contrary to what you may choose to believe, the vast majority of these type get away with it. If all that didn;t pay taxes suddenly paid what they really owed, there probably would be no deficit. See, that word *if* is a killer.

Hi Jamey, My name is Woody Parr and I'm up the road in Cornelia. I'm afraid that I'm indirectly responsible for this troll who is badmouthing you at alt.religion.urantiabook. You see he was only there in the first place to attack me.

This idiot is Steven J. Rogovich, 1612 Lake Christopher dr. Virginia Beach, Va. 23464 He followed me to the UB usenet page from alt.radio.pirate He and I (were) both formerly loosely associated with each other in the shortwave pirate radio listening hobby. I USED to be a shortwave pirate but my station has been permanently retired for more than 2 years now. Stevie is still a pirate and is the operator of the station Radio Free Speech. He is also the moderator of a message board at the Free Radio Network < www.frn.net > and goes by the handle of Pat Murphy there. I had a falling out with the people at the FRN a couple of years ago as they became corrupt and were doing so inappropriate things. I dared to open my mouth and openly complain about there stupid activities which since they havn't yet ceased to follow me around the internet anywhere they can and attack me.

Steve is also on the usenet trolling people under the name of Richard Cranium (richardcranus@yahoo.com) He's far too much of a coward to debate anyone using his real name.

Taken out of context, you can make a factual statement sound like a
threat, delusions of grandeur, or whatever you want. But to see the
original post and discover who actually started the trouble, let's go
back to the thread where that quote appears. Wow, look who originated
the thread (an attack on me) out of nowhere. It's our old pal

Unfortunately, my news server was down for a couple of days and I didn't jump on one of the web-based news servers. You are 100% correct about wrong information being posted. Unfortunately, you missed the mark on your other comments. The key to efficiency is to NOT run near the middle of the load line of the active device. Unfortunately, this does occur in linear amplifiers. A class A amp (to achieve maximum output) has to be biased in the middle of the load line. This means that the maximum sine wave will run just short of rail to rail and cause the device to dissipate the same amount of power as the load (assuming no other losses, this means a 50% efficiency). Biasing the amp higher or lower will result in less maximum output (and, of course, lower maximum signal in to the device). I believe I stated that maximum efficiency (and I may not have been clear here) that one can expect would be on the order of 25% from a class A, a bit over 50% for ab1, perhaps up to 60% for ab2, 65% for class b, and 70% and higher for class C. Of course, the WAVEFORM itself can effect this. If you choose to input a SQUARE wave, you could make that class A amplifier approach 100% efficiency by simply running as close to rail to rail as possible. At maximum output, the voltage drop would approach zero across the device and current would not matter (zero volts time whatever = zero watts across the active device - a short circuit). At maximum negative input, the current would approach zero and full supply voltage would appear across the active device (an open circuit for the active device). In this case, zero amps times however many volts = zero watts and no power would be developed across the active device. This would mean, in the case of a square wave (assuming zero rise and fall times and a perfect device), 100% efficiency. This approach is used (in a way) for switchmode amplifiers. They easily exceed 90% efficiency. Oh, then you can use pulse duration modulation - which means the device is either fully on or fully off (again, in theory, no power loss across the active device), but by varying the on duration, you can effectively produce a signal whose average voltage will change across a load while still experiencing (theoretically) no loss across the device (thus, achieve linear amplification via a switchmode amplifier). Not a trivial task, however.

Interesting theory. Can you prove that nothing originating in one state is received in another? BTW, I used to hear one of the 50 KW clear channel AM broadcasts out of California here in New York. Yes, I have received television stations from Canada. Interesting concept that all electromagnetic radiation stops at state boarders. This concept may go over as well as some of the folks who claimed that IRS had no legal authority to collect taxes. Some of those folks did not pass go nor collect $200.00.

I replied to your other post. I'll make this short and sweet. I can PROVE that electromagnetic radiation can propogate over state lines. Most of the folks in this newsgroup also know this. I can receive television from Canada. Unless someone can prove that electromagnetic radiation STOPS at each state's boarder, your argument holds as much water as the states' boarders hold electromagnetic radiation.

George, I wonder if you have ever used CB to order a pizza (or call home to have one ordered)? Likely some have. Amateurs have. AM, FM, and television (at least here in Rochester, NY - maybe your area is different) can be received beyond the state bounderies. We can receive Canadian television stations. They carry advertising. Sounds like interstate commerce to me.

I agree, taken out of context anything can be misconstrued, which is
exactly what you attempt but fail to pull off here. There were no
"attacks" on you, as you just claimed, simply chimbubba "wishing" you
would go away. You are way too paranoid which usually always accompanies
delusions of grandeur, such as pointed out in your above post. Chimbubba
was merely stating his opinion in response to your off topic posts and
other nonrelated issues and bullshit you sling in general. You must have
felt threatened or cornered or guilty or something of that nature to go
grasping as far as naming a posse that you apparently and correctly
assumed shared your nature of discontent.
Note you didn't touch on the subject of Lelnad's threat to the group and
his pact with Dogie to porn-spam (which he made good on) and you also

failed to respond or address why your last "voobner" account was pulled, and wisely so. To do so would be to recognize your intolerance and hypocrisy. I'm not certain your psyche can handle any more that type battering of the ego.
It was YOUR response, it stands on its own and needs not be taken in any context except which it was written.

I was shooting for what to expect with amps. 25% would be expected with class a. Yes, 50% is the maximum theoretical efficiency. Class ab will run well over 50% to over 60%. B should achieve 65% or so. Class C should get 70%, possibly higher. Of course, the conduction angle of that class C will effect the efficiency as well. Pretty much a silly argument over 5 or 10% - with the exception of the class A amp. I get nervous when someone claims 75% efficiency on an alleged linear amp. Likely they are overdriving the thing well into saturation and with the amp spending a lot of time a cutoff or saturation, the output ain't gonna be too clean.

They sure do if you don't have a doctors prescription for it, just the same as you can't have a bottle of valiums without your name on the bottle. The drug valium is legal but without a precription it is not.

The full article will be available on the Web for a limited time:

Twisty it is no different then them taking you prozac or Valium without you having a prescription, prove you have a prescription you can get your drugs back. That doesn't mean pot is LEGAL for anyone else in Santa Cruz, unless they hold a valid prescription why are you trying to make it out like anyone can use pot there.

Actually, I am in a very dry area (technically not desert, but we only
get 20 inches of rainfall per year, and most of that happens during a
period of about 2 weeks).

My wife can do amazing things with electronics (I'm being sarcastic).
Sometimes I even have to hide the remote, just to prevent her from
working herself into a red faced fury. It's so bad, she just avoids
turning knobs, and calls me when she needs something adjusted.

I have a large piece of land on top of a hill. However, I do live in an area with an association that would frown on 100' verticals and large loops out in the open.

When I first started this antenna project, I considered winding a loop around wooden posts attached to the side of my home. It would have been less visible than one out in the open (especially if I matched the wire color to the house). However, a long wire running down the side of the hill, hidden by the natural brush, seemed easier and less visible.

3 chords - wow - you should hear what they call 'music' today (rap?) ....
btw were you referring to only 3 chords (such as C, F, and G7) or 3 note
chords? Of course, in the case of live entertainment, most of the customers
are either too drunk or have a tin ear to know the difference anyhow.
Either way, too much music has gravitated to the lowest common denominator,
not unlike the amateur licenses of today.

Bob Dylan SUCKS!!!!!
-
Ha! I liked Dylan and Sabbath, but Dylan was THE consciousness of the
sixties. Dylan fans were usually a bit more intellectual than Sabbath
fans. While Dylan fans were for the most part actually concerned with
world change, Sabbath fans were busy playing Black Magic and referring
to 3 chord rock as "music"...these fans eventually gravitated toward
such bands as AC/DC, Judas Priest, Iron Maiden, and other nonsensical
"metal" bands.
As I said, I like them both and Ozzy WAS fun, (but never managed to
recapture the magic of the early Sabbath days) but those that can't
comprehend Dylan usually blew him off and chastised him without even
having the slightest inkling concerning his music. If he sucks,,,so does
Hendrix, the Stones, Clapton, and a host of other stars, as they ALL

copied Dylan tunes.

133. Re: Peaking a Radio

I don't like to post my email address on Usenet. I used to, but I
ended up getting hundreds (no exaggeration) of junk emails to that
address.

I have been corresponding with a very helpful technician at a CB shop.
He has experience with my radio, and was able to explain the process.

I peaked my radio, and managed to boost the output from 3.66W to 5.74W
(both numbers measured with the antenna as a load, not a resistor).
It works great.

Thanks to all who offered suggestions and opinions.

Let's forget the linear for a minute and concentrate on the problem. Most consumer equipment is not well designed for use in an rf field. Filters on your equipment are unlikely to help a lot. Getting the neighbor to put filters on his equipment may be difficult. One thing you can do is locate your antenna as far away from the neighbor as possible. Changing from horizontal to vertical or vertical to horizontal polarization may help. Unfortunately, if you can't do this easily, you will have to work with your neighbor. Speaker leads close to 1/4 wavelength can cause problems. Power lines can couple rf into the device. Ferrites may help, but the best thing would be to locate someone in your area who has dealt with these types of interference problems (ps - the phone company may well sell filters that would help you with the telephone interference problem). Regardless of harmonics (and you really should NOT have any - the linear raises questions), the telephone should NOT pick up rf (but those cheap phones do, of course). The last part of the equation is the use of the linear. This can be a problem for licensed amateurs (due to the increased field strength), but leaves an unlicensed individual with his tail section hanging out a mile - so see if you can do something with the location of the antenna to reduce the problem before you approach the neighbor. Getting it up high will help.

You'd be surprised how many companies are rushing to China to have their stuff assembled for 30 cents per hour or less. Even the Bose Wave Radios are assembled in Mexico (only the CD radios are manufactured in the US). Now, supply and demand is catching up. The Mexicans were earning 90 cents per hour. I've heard, but am not sure, that is now around $3.00 per hour. So ... the search goes on for cheap labor. I wonder how good a worker does when they are starving?

Every time the pirate radio ops get a little excited they pull out
that same old stuff and try to spin it into something it isn't.
Spin, spin, spin, is all they do, the way they wish to interpret
it is pure BS.

Spin all you want but it isn't sticking. I stated a simple fact; i.e. if Chimbuba's wish were to come true, his problem wouldn't go away. The issue of legal vs. illegal CB has come up many times in the past and will continue to be discussed now and in the future, without my involvement. Freedom of speech means that you (Twistedhed) can advocate lawbreaking and disrespect for the government all you want, but you're prohibited from trying to silence the people who disagree with you. Thier voices will be heard, at as loud a volume as yours.

What a loser! Do you really think that the other readers are going to
believe in anything other than your frustration and desperation if you
keep posting that? That proves nothing.

Where's your PROOF, Aanal Aaron? You got nothing. You know nothing.
You are nothing.

Back it up, dumbulb; post your PROOF.

It does raise an interesting question, however, Tim. I've seen claims that most of the hams are 'geeks'. I've only met two that would qualify as such. A lot of normal, married, folks have amateur tickets. A 12 year old kid, Jimmy, just got his ticket in another group. Sooo ... that, to me kills both the 'geek' thing as well as the 'over 50' deal (yes, families tend to reduce amateur activity a lot between the teen years and, say, 40 or so - I let my ticket expire and then simply retested in '93). Then there is the 'test' question, along with Morse code. Morse isn't necessary for the tech license (and moonbounce has been achieved too many times to count). The 5 words per minutes could be achieved within a week. So I question the validity of the 'test' as the reason a lot of folks (active in radio, but unlicensed) don't get the license. This leaves one big question in my mind. I believe you are just starting to hit the nail on the head when you mention keeping a current address with the FCC. Of course, there is a LOT more to that nail. You won't get an answer from a licensed amateur without a callsign. Granted, one can fake a callsign, but I believe you understand where I am comming from. In amateur radio, your fingerprints are all over your transmissions. My gut feeling is THAT is the real reason a lot of folks don't go for the ticket. Just my humble opinion, mind you.

73 from Rochester, NY
Jim

Nothing boring about the FRN. It's been a very useful site since you
were forced to leave for causing trouble and slandering people. And
just sos you know, theres only 1 administrator on the FRN. The owner.
He has a couple of people acting as moderators to keep things in line.
I've lurked in the UseNet groups for years, bobbie-girl.

Excuse me, "Bobbie-girl", but if the claim against you was false, why
was your account cancelled? And what makes you think I send it?

You've been on the usenet for years, bobbie-girl, and anybody can do a
search to prove that. Just search for Radio Bob and/or rbcn1.

Still jamming the ham repeaters in Cornelia, GA?

TROLL!!

Hi Jamey, My name is Woody Parr and I'm up the road in Cornelia. I'm afraid that I'm indirectly responsible for this troll who is badmouthing you at alt.religion.urantiabook. You see he was only there in the first place to attack me.

This idiot is Steven J. Rogovich, 1612 Lake Christopher dr. Virginia Beach, Va. 23464 He followed me to the UB usenet page from alt.radio.pirate He and I (were) both formerly loosely associated with each other in the shortwave pirate radio listening hobby. I USED to be a shortwave pirate but my station has been permanently retired for more than 2 years now. Stevie is still a pirate and is the operator of the station Radio Free Speech. He is also the moderator of a message board at the Free Radio Network < www.frn.net > and goes by the handle of Pat Murphy there. I had a falling out with the people at the FRN a couple of years ago as they became corrupt and were doing so inappropriate things. I dared to open my mouth and openly complain about there stupid activities which since they havn't yet ceased to follow me around the internet anywhere they can and attack me.

Steve is also on the usenet trolling people under the name of Richard Cranium (richardcranus@yahoo.com) He's far too much of a coward to debate anyone using his real name.

Thanks Keith. We were worried here in the Galveston area today, but it appears that the storm has started to make the much touted turn to the north. Louisiana is not going to have a good day tomorrow. I sincerely hope everyone in harms way has made the proper decisions. We had a cat 3 here in 1983, and it was not fun by any stretch of the imagination, and I really cannot fathom a cat 4 or higher. Prayers may very well be in order.

Randy

Boy you Canadians really are in need of help...so here goes...
Grant XL wiring:
Pin1=Audio
Pin2=Shield/Ground
Pin3=Receive
Pin4=Switching Wire
Pin5=Transmit
Open the mic up and see how the switch functions and where the wires go to
determine what each colored wire does. Then match it to the above list...or

I was in FLA in the aftermath of Andrew, looked like a gigantic bomb
had gone off. Entire blocks where every house was flattened, you
couldn't even tell what street you were on. When Hugo hit, I stopped
to see a friend of mine in the carolinas, his neigbors tree had been
"relocated", right through the bottom of his new in-ground pool.\

I have no desire to live through such a storm, having seen one too
many tornados too close is bad enough, I had one cross I-75 100 yards
in front of me a few years back, and had one go over my head as a
child.

I'd rather go down and listen to some of the good jazz that New
Orleans is famous for, and maybe some good cajun food and cold beer
heheh. I wonder if any of the jazz clubs have an open stage policy
where they'll let people come up on stage and jam..... that would
rock.

Hey guys, I've just bought my first CB. It's a Uniden Grant LT and my antenna is a Wilson 1000. When i use it, my antenna is about 15 feet from my house, on a 5 foot ladder. Anyways, here's my problem: The guy is bought it off of boosted the output to 9.5 watts, and did a modification to give me 27.605MHz to 28.045MHz when I switch to the "bright" mode. When I switch to the "bright" mode, and to my LSB and USB, i can don't get many skips and when i do get them, it seems my transmit isn't reaching them. I'm in northern Ontario, Canada and i was wondering what frequencies most CBer's hang out on to get skips?

Regards, DL

Not sure if I am even getting the job heheh, I sent another resume in
for a similar position in Nashville. With my luck, they'll give it to
some snot nosed punk who's fresh out of college with absolutely no
experiance whatsoever, rather than hiring someone who has learn the
best way, the school of hard knocks.

Don't take me the wrong way, I have been to collee myself, but I
learned more on my own than I did from the professors.

Usually they hang out below 26.965 (in the basement),
26.915....26.895....26.735
etcetra...etcetra, the real question is why ya trying run skip on Side-band.
The usual suspects use AM when the ionosphere allows the RF signal to see
itself
in the mirror........
Just do us all a favor and stay out of the ham bands until you get you're
license

Correct.

> efficiency).

Wrong!!! Quoted from "Modern Electronic Circuit Design" by David J.
Comer, Published by - Addison Wesley 1976, pages 529-530.

****
The ac considerations are slightly different from those of the dc
case. With a given power supply voltage Vcc, the greatest peak-to-peak
voltage that can be delivered to a resistive load is equal to Vcc, and
the quiescent voltage must be chosen as Vceq = Vcc/2 for this output
voltage to occur. Minimizing the value of RL will maximize the power
delivered to the load. However, the minimum value of RL is determined
by the collector current rating, as shown in Fig 12.2. The minimum
value of RL that will not result in excessive collector current is

RL = Vcc / Imax

If the quiescent voltage is Vceq=Vcc/2, the collector current will be Icq=Imax/2, and the ac power that can be delivered to the load is

Pac = (Vpeak)^2 / (2*RL) = (Vcc)^2 / (8*RL)

The circuit efficiency of an amplifier is a measure of the effectiveness with which the stage converts the dc input power to ac output power. This efficiency is defined as

N = (Pac / Ps) * 100

where Ps is the power delivered by the dc power supply. Using this equation for the resistive load stage gives

(Vpeak)^2 / (2*RL)
N = ---------- * 100
Vcc*Icq

Both ac power and source power depend on Icq. If Icq is less than Imax/2, the peak voltage swing that can occur before cutoff is Vpeak=Icq*RL; thus the circuit efficiency becomes

Icq*RL
N = --------- * 100 for Icq less than or equal to Imax / 2
2*Vcc

The efficiency is seen to increase as Icq increases up to the point where Icq=Imax/2. Above this value of current, the peak voltage swing is limited by the saturation of the transistor. As Icq increases above Imax/2, the maximum possible voltage swing decreases and the input source power increases. Therefore we conclude that maximum efficiency occurs when Icq=Imax/2. This value of efficiency is

(Vcc)^2 / (8*RL)
Nmax = ---------- * 100
Vcc*(Imax / 2)

Since Imax = Vcc / 2

Nmax = 25 percent

We note that the quiescent collector current resulting in maximum possible efficiency is the same current that allows maximum output power. Unfortunately, this current also results in maximum transistor dissipation, as we have seen earlier. The transistor dissipation with no input signal is

Pt = (Vcc)^2 / (4*RL)

which is twice the ac power that can be delivered to the load.
****

End of Quote. The same argument can be made for a tube amplifier as well. All you need to do is replace Vcc with the Plate voltage, and Icq etc. with their plate current equivalents. The above analysis was for a common emitter amplifier, or for a tube a grounded cathode

amplifier.

> Biasing the amp higher or lower will result in less maximum
> output (and, of course, lower maximum signal in to the device).

That's covered by the quoted analysis above.

> I believe I
> stated that maximum efficiency (and I may not have been clear here)
that one
> can expect would be on the order of 25% from a class A,

It should be less since 25 percent is the very best you can do.

> a bit over 50% for
> ab1, perhaps up to 60% for ab2, 65% for class b, and 70% and higher
for
> class C.

I would tend to agree here. These numbers are close to what you would expect to get in a REAL amplifier, that is after taking in to consideration other sources of power loss. Yeti however was talking about maximum theoretical efficiency. I think that's where he goofed up. There is a BIG difference between maximum theoretical efficiency, and typical efficiency, so you can't just use one for the other.

> Of course, the WAVEFORM itself can effect this. If you choose to
> input a SQUARE wave, you could make that class A amplifier approach
100%
> efficiency by simply running as close to rail to rail as possible.

A 50 percent duty square wave is just about the only waveform that can do so, approach 100% efficiency. The reason being is the transition time from high to low, or low to high, is a very tiny fraction of the total cycle, thus the device spends very little time in the active region. I have to deal with this all the time in inverter design. We call it "switching losses".

> At maximum output, the voltage drop would approach zero across the
device and

> achieve linear amplification via a switchmode amplifier). Not a
trivial
> task, however.

You ever hear of a Buck converter? It uses PWM waveforms to step higher DC voltages to a lower value. Same Idea as you had above. We use them in a line of our RF power inverters. Typical spec's input voltage is 650 VDC stepping down to 300 VDC at 200 amps. Switching frequency is 9 or 14 Khz depending on the model. The converter provides the controlled DC source voltage I need for the phase locked MOSFET bridge, which generates the RF output power.

So right you are Jim. Lawrence Technical University has an on campus wireless society. Anybody who has an interest in LEGAL wireless communication is welcomed, this does include CBers as well. I'm a member of the group. You don't have to have a Ham ticket either. Anyway one of the young people decided to get his Tech class license a couple of months ago. He had no way to get to any Ham Radio swaps on his own, he's about 20 and his car won't make the trip, so I took him with me to the past Findlay and Adrain swaps. He picked up a used 2m mobile rig and a few other items to get started. Keith met him at Findlay and I think Chuck may have at the Adrian swap.

Amen. From what I see on the weather maps, it appears to be one NASTY hurricane. It also appears that Louisiana is going to get hurt pretty badly. My prayers also are going out to the folks down in those areas.

Don't let the pirate types on this news group rip you about getting a
Ham Ticket. Its your best bet to enjoy radio, and do so with out Radio
Industry Canada knocking on your door about running extra legal power
and out of band on 11m.

Check the links below for more info.

Your best bet is just stay legal with your radio and power, no extra channels, and no extra legal power. If you really want to work DX so bad on HF try getting a Ham ticket. A 5 wpm morse code test, and a couple of simple written exams will give you a General Class license. With that you can LEGALLY run up to 1500 watts of power and pick what band is open to work DX. While the priate types here will recommend operating outside of the legal 40 channels that won't do you any good in another year or so because the sun spot cycle is already on it's way down. When the CB priates can't talk passed the city limits you, as a General Class Ham, you can simply drop down to the lower frequency bands to find one open. And the chance of that happening is far higher than hanging out on 11m.

Check out the links below for more info.

Mopar, the start of the thread had a URL to a site claiming the FCC had no authority to regulate the airwaves. This would imply cb, amateur, freebanders, am/fm/tv broadcasting - you name it. This does not necessarily imply they are regulating it, only that the thinking is faulty that they have no authority to regulate it (if they ever do ...)

Tell that to the party that mailed it to him Mopar. Twisted seems to have a huge problem with keeping his facts straight. You know it and I know it. And if he didn't deliberately try to stir things up on this news group, by misrepresenting the facts, he may never have gotten it, the "jock strap" in the mail, in the first place. From time to time I feel like reminding him of that. If he wants to go around twisting dragon tails he can expect to get flamed every once in a while. Its part and parcel of the game he plays.

BTW if you haven't noticed I have posted very little to him in a long while, just to see what happens, well never the less he still keeps up his constant bad mouthing. Seems like all he is really interested in, as always, is causing trouble. I think he really likes to get his rocks off on the crap he stirs up on the group.

> amp output?

I think it would be a tad easier to buy a 20 amp supply.
What you're considering is not totally impossible to do, but would probably require more work than just hooking them together as you do with batteries. Consider the idea that the internal parts are designed for the output as they are, then you want to compound it by adding them together. You'd probably have to change everything around inside to ensure that the two units could handle the combined output.

How about WLW 700 AM broadcasting out of Cincinnati, Ohio?
They get heard in Los Angeles, California.
Then what if that little itty bitty 50 watt station in Deleware is heard in
New York City?
Oooooooops. There goes the theory that radio stations have nothing to do with
interstate commerce.
Oh, and speaking of cincinnati, a mile away from Kentucky, and 20 miles away
from Indianna.
Noo sir. 50 watt stations have no interstate commerce problems what so ever.
So quit posting this crapola link.You're only looking to be flamed on it.

185. Identify these old mono-channel walkie-talkies?

Newsgroup: rec.radio.cb
Date: 2002-10-03 06:36:58 UTC
From: Will White <googlyelmo@earthlink.net>
Message-ID: <3D9BE59C.C0642F8F@earthlink.net>
Source record: 138965

I found a pair of Sears-branded single channel 100 mW CB walkie talkies at a local thrift shop for $3 for the pair. They are in *beautiful* working shape, with black wrinkle metal case and chromed die-cast fronts, and even a snazzy little analog battery level indicator. Not a scratch, chip, rub, dent, or spot of rust on them!

They have also an earphone jack, off course a PTT switch, and on on-off-volume pot, and run off standard 9-V batteries. They look almost new, and of sufficiently high quality they were probably marketed back in 65 to CB hobbyists/utility users rather than to kids.

Now, while they do work fairly well (crystalled for Channel 11 as I received them). They could use an alignment, and the audio section of one of them at least needs new caps, and probably the PS needs caps as well. They each transmit and receive, but with lots of noise (no squelch circuit?), and one of the pair has low audio and a good deal of distortion, as well as picking up faintly a local AM BCB station sometimes. All the info I can furnish is as follows below:

*Labelled as Sears-brand
*Says "9 Transistor" below speaker-mike on front
*Marked on back "chassis #. 787.10001"
*Also on back ""service # 787-645000"
*Has old version of Part 15 warning on back (the one that mentions antenna length and power *input* and crystal tolerance (0.005%!)
*Manufacture Date May, 1965
*stamps both on the back and inside the chassis indicate these units were made in Japan.
*most transistors are marked "Toshiba", with a couple as 2SB56, 2SA74, 2SA92

I would be grateful to anyone who can probide me with any help or guidance in identifying these walkie-talkies, expecially in determining who the manufacturer was. I would be happy to pay reseaonable costs if anyone could provide me with a schematic, from Rider or Sams or some similar source. If you can only refer me to an expert in tracingin/IDing old CBs.

I'd like to put these back in original working condition. All advice, directions, suggestions, comments, and referrals very graciously accepted! Thanks!

Note how "Aaron" has to post in reply to only points which he pretends to rebuke. Although not making any valid points, he is putting forth propaganda in an attempt to discredit the truth by diluting the discussion. His failure to socially engineer his lies into the group and cover truths results in repeating the redundant behavior of constantly straying from the topic and turning it personal, as witnessed in his imagined "attack" by chimbubba for merely making a wish.

199. Re: can two regulated power supplies be combined for more current?

Newsgroup: rec.radio.cb
Date: 2002-10-03 14:26:34 UTC
From: 'Doc <w5lz@icok.net>
Message-ID: <3D9C5388.D3705234@icok.net>
Source record: 138980

AJ,
Sure, you can parallel two power supplies. There
are a couple of things you should be aware of when you
do that, though. The rated output of each PS should
be the same. If one supply is 'larger' than the other,
the 'smaller' of the two is going to work harder than
the other. That means that it will also fail sooner
than it should, normally. Unfortunately, when parallel
supplies like this fail, they usually take whatever is
connected to them, with them to the great power supply
graveyard. Both supplies should be connected so that
they can both be turned on at the same time. That keeps
one from 'surging' through the slower supply, something
else that's not the best thing to do to a power supply.
This isn't to say that you shouldn't combine two PS
as you want to do, just take a few precautions by adding
a protection circuit or two.
'Doc

> of an illegal linear.

I think when somebody is chanting "Ba-ba-booyey" over and over and over, the *need* to be keyed on. I don't interfere with people conversing, but when I am giving someone directions and they key over me in the middle of my exchange of information, then IMHO, I am justified in adding some "fire to my wire."

> Are you a police officer?

Yes. And I also drive a truck. And I've been known to perform manual labor on occassion.

> I agree with the spirit of the law. And the spirit of the law in
> regard to CB is to avoid intentional interference and allow everyone a
> chance to communicate.

And there were protocols that every licensed CBer knew and that "most" practiced. Those protocols are out the window now, and CB is a free for all. Your only chance to communicate effectively is to "pump it up."

> It's become impossible to communicate BECAUSE a majority of people are
> running extra wattage and modulation.

No...it is impossible to communicate because you have too many people trying to talk at the same time.

>If the FCC let everyone decide their own wattage -- they'd
> let only SOME people (the ones with extra power) communicate -- and
> not others (the ones with low power).

The FCC did that when they dropped the licensing requirement and *anybody* with 50 bucks was able to buy a CB and dominate the airways.

> Proper radio etiquette is about observing limits too.

We have differing opinions of what comprises "proper radio etiquette" on a CB.

What if the 40
> legal channels became so polluted by high power and so unusable that
> the majority of CB'ers moved to unauthorized bands? Would you follow?

Ummmm......probably not, but then I don't anticipate that happening. What if the FCC dropped licensing requirements for "hams" and all the CBers bought export radios? Would you leave?

Just got back in the cb hobby.Texas ranger base and an a99 on the side of the house. I'm running legal 4w power and i seem to be "stuck in the mud". Can't talk to anyone without getting hammered by someone with power. I don't remember this problem back in the late 70's. I would love to stay legal but i see no other option but to purchase a linear. A beam is out as i'm lucky to have the a99 due to antenna restrictions.

From: aa2qa@frontiernet.net (Jim Hampton)
3 chords - wow - you should hear what they call 'music' today (rap?)
... btw were you referring to only 3 chords (such as C, F, and G7) or 3
note chords? <<

3 chords, not notes... but you're right,,some of the stuff today IS only
3 repetetive notes...I can't listen to that stuff.....rap and opera are
about the only types music that bug me....but way back in the seventies,
there were a few rappers that were getting on down b4 they were actually
labeled "rappers" and some were downright kicking azz at the
time.....Grandmaster Flash comes to mind along with a few
others.....listen to "Blowfly's Rap" sometime.....

>Of course, in the case of live entertainment, most of the customers are
either too drunk or have a tin ear to know the difference anyhow.
<<

Yup. Same with comedy. The jokes seem much funnier when everyone is
plastered.
Either way, too much music has gravitated to the lowest common
denominator, not unlike the amateur licenses of today. 73 from
Rochester, NY
Jim<<

Yea, there is some pretty crazy stuff out there. Somewhere along the
line it went way beyond Mick and the boys singing about some "Brown
Sugar".

The hammie community looks upon thee as blights,,,canker sores of the
community, the bottom of the feeders. Unfortunately, the above line
written by "Aaron" proved to be profoundly prophetic, as did KC8LDO
Lelnad's threats to have Dogie porn-spam the group.
-
It wasn't a threat. It was a prediction, which so happened to come true.

--
Leland C. Scott
KC8LDO
ARRL Member
NCI Member

Well, you can call it whatever you like. Let's see.....
I claimed that reporting Dogie got him TOSSES and that it stopped his
flooding..remember this...

>"But, it did stop the flooding. That can't be
denied"......in response to KC8LDO's assertion that reporting a porn
posting flooder in rec.radio.cb did no good. <<

Which was in response to your threat below....

>"He could have stop simply because that is what he wanted to do. I'm
sure if you want to test the water he would be happy to resume it just
to prove a point.
73 de,
Leland C. Scott
KC8LDO
ARRL member
NCI member<

You're too predictable, Lelnad. Whenever you can't control yourself and
your anger gets the best of you, you post a forge and start talking
about mens undergarments.
Nevertheless, you made the threat in a pact with Dogie and made good on
it. Get over yourself.

At least Iam not people like you who are judgemental about people I
don't even know, I am only trying to learn the best way by asking a few
questions.
-
>Your best bet is just stay legal with your radio and power, no extra
channels, and no extra legal power. If you really want to work DX so bad
on HF try getting a Ham ticket. A 5 wpm morse code test, and a couple of
simple written exams will give you a General Class license. With that
you can LEGALLY run up to 1500 watts of power and pick what band is open
to work DX. While the priate types here will recommend operating outside
of the legal 40 channels<<

More Lelnad Bullshit. Couple this with your past off-topic, insultive
posts that dwell on your sexual fondness for mens underwear and then
tell us why in the world would anyone want to do anything you suggest?
Besides, Lelnad, you're one of the more famous pirates in here. First
you accused me and Tim of using your call (gag). Then you began hearing
from others that heard your call on 555......you're worldwide and tree
top tall, Nad!

> that won't do you any good in another year or so because the sun spot
cycle is already on it's way down. When the CB priates can't talk passed
the city limits you, <<

And yet even more bullshit innuendo. Here 'Nad can barely contain his
hate and discontent for cbers....why when a cber can't talk past the
city limits they are automatically a pirate? Think, Nad, think before
you post.

>as a General Class Ham, you can simply drop down to the lower frequency
bands to find one open. And the chance of that happening is far higher
than hanging out on 11m. <<

If one is simply looking for an open band, you can do it without being a
General, also.

>Check out the links below for more info.
http://www.arrl.org/
http://www.arrl.org/hamradio.html <<

And find a good Elmer. I say this because I shudder at the thought of
any of the troubled no-code posse that Aaron named as trying to be
anyones elmer. They are lids.

I'd rather go down and listen to some of the good jazz that New Orleans is famous for, and maybe some good cajun food and cold beer heheh. I wonder if any of the jazz clubs have an open stage policy where they'll let people come up on stage and jam..... that would rock.

Yet, if one is operating within the rules, why does "having one's
fingerprint all over his transmissions"
matter? After all, Amateur Radio does offer those things LEGALLY that many
CBers do illegally:
DX, mo' power (but one quickly learns that it isn't really
necessary---maybe a tad on 75 Meters),
etc, and things that CB doesn't offer like moonbounce and talking to the
space station--which is why Lance Bass got his ticket. I'm not trying to
argue at all, I honestly don't see where it matters
if the FCC Chairman (Powell) 'hisself' is listening to me. I don't really
care cuz I stay within the
very wide parameters the rules allow me.

Because humans have the intellectual ability to create orderly societies
that do not devour the weaker ones or foster the wants of a few over the
needs of the whole. In the case of radio, it
has proven to be an integral part of making life richer, safer, and more
convenient for us all. In order for radio to continue to provide benefits
to societies, it has to be regulated, divided up, and
"fenced", as it were, by some agency which, in the USA, happens to be FCC.
Even in this area,
people's greed often reflects "Darwinism"; IOW, nations look hungrily at
others' lands, wealth, and
way of living and covet it. Wars thru out history have been fought for
building empires. *Some* radio ops would wish to build an "empire" of
frequencies at the expense of other, even more impor-
tant radio users. Except for the "army" designed to protect the interests
of those users, radio would
be reduced to, well, what CB is already. The "warriors", having ruined what
they already had, seek
to move on to other pastures, when that is spoiled, on to others until there
is nothing left but squeals, howls, and a useless medium.

It WAS that way once, it didn't work then, and it wouldn't work now.

Jerry

SWR in the feedline does not matter. SWR into the rig may, but that can easily be remedied.

Jerry<<

And you should be commended for doing what you feel is your part and
duty. Thing is, we don't all agree on all the rules......whether it's cb
or hammie radio. Civil disobedience goes a long way sometimes....look at
the double nickle speed limits that were repealed.

Field strength is more important. Adjust for max field strength and then use a transmatch (Fancy shmancy name for an tuner) to match the impedance of the feedline so the xmitter "sees" what it wants to see, an impedance of 50 Ohms. That way, the xmitter can deliver ALL of it's power to an antenna that is configured for the maximum field strength. "Won't there be losses in the feedline due to excessive SWR?" Ladder-line baby! Lower loss than ANY coax...regardless of SWR. Dat's me take on it, hope it helped. :-)

Send your radio here...

http://www.fgbestcommunications.com/

Ask to have Bill Good work on your radio. It will be CLEAN (unlike most of the hack jobs done out here) and loud. A much better performer than what came out of the factory AND much cleaner too!

Next, get a real antenna. The A-99 works...but sucks! Se here...

http://www.qsl.net/kg6aoh/a99/

You are much better of with a IMAX 2000 or a Maco V58. The best money you can spend is on your antenna! Since you have antenna restrictions, the IMAX 2000 will fit your needs nicely!

If you really want a GREAT antenna, get an Interceptor 10K!

http://www.a1antennas.com

You will need to tune it for 11 meters (easy to do, just follow the instructions).

After that there are only beams.

An amplifier will only make a dirty station MORE dirty! You don't need an amp. I don't run one and sound GREAT. All the locals say my signal is CLEAN AND CLEAR! This what you want!

Do it right the first time!

Dino

>Just got back in the cb hobby.Texas ranger base and an a99 on the side of

I'm not frustrated or desperate at all, but I am waiting for your
alleged PROOF, Aanal Aaron. Don't have any? Why not just admit it?
Just have to show the world what a complete moron you are?

At the risk of sounding as repetitive as you are: You got nothing, you
know nothing, you are nothing.

229. Galaxy DX-55V 10 Meter Radio Forsale

Newsgroup: rec.radio.cb
Date: 2002-10-03 19:12:38 UTC
From: thatzmejp@aol.com
Message-ID: <20021003151238.00921.00009710@mb-fk.aol.com>
Source record: 139011

I bought this radio one year ago. It has only been used by me as a base station, has never been in a car. I had it professionally tuned up. It has Variable PWR from .5 to 8 watts and modulates to around 30. Modulation has been tuned up as well. This is a VERY loud radio and has alot of swing. I still have the Galaxy 55 Box, mounting brackets, power cord, the original stock hand mic, manuals, and whatever else it came with. I have it all. Has the freq counter, large eas to read meter and has Bands A thru F giving you 240 channels. I promise you will not be disappointed with this Galaxy. $170 OBO... Thanks for looking

Thatz-me-JP

230. Antron's new antenna...

Newsgroup: rec.radio.cb
Date: 2002-10-03 19:13:08 UTC
From: Dino <noemail@here.com>
Message-ID: <8F0n9.6901$OB5.659574@newsread2.prod.itd.earthlink.net>
Source record: 139012

It could be only a rumor...or a drunk Texan, but ispoke with a gentleman on 425 yesterday who is "testing" a new Antron antenna. It is "34' long and covers up to the 440 band".

Now, everything is a compromise. If this antenna is slated for the 10, 6, 2M and 440 users, I'm sure it will work "OK" on those bands. But not great on any one band.

I was told that if all goes well it will be out in production in the next few years.

If they want to REALLY test an antenna, send it here...

http://www.qsl.net/kg6aoh/a99/
http://www.qsl.net/kg6aoh/imax2000/

or send it to me. I will put it through its paces and write a real review. Also, lets see some antenna modeling files!

Dino

Hi Jamey, My name is Woody Parr and I'm up the road in Cornelia. I'm afraid that I'm indirectly responsible for this troll who is badmouthing you at alt.religion.urantiabook. You see he was only there in the first place to attack me.

This idiot is Steven J. Rogovich, 1612 Lake Christopher dr. Virginia Beach, Va. 23464 He followed me to the UB usenet page from alt.radio.pirate He and I (were) both formerly loosely associated with each other in the shortwave pirate radio listening hobby. I USED to be a shortwave pirate but my station has been permanently retired for more than 2 years now. Stevie is still a pirate and is the operator of the station Radio Free Speech. He is also the moderator of a message board at the Free Radio Network < www.frn.net > and goes by the handle of Pat Murphy there. I had a falling out with the people at the FRN a couple of years ago as they became corrupt and were doing so inappropriate things. I dared to open my mouth and openly complain about there stupid activities which since they havn't yet ceased to follow me around the internet anywhere they can and attack me.

Steve is also on the usenet trolling people under the name of Richard Cranium (richardcranus@yahoo.com) He's far too much of a coward to debate anyone using his real name.

Those who tend to operate illegally want to stay in the dark, like
thieves who prefer the cloak of darkness to do their deeds. People
operating within the FCC rules need not be so paranoid. When I
operate I do so according to the rules, and giving my call on the
ham bands causes me no concern, I haven't done anything illegal.
To those types who seem so paranoid it must be terrible to always
wonder if you're going to eventually get caught.

Right on, Bert!

SWR exists in those matching sections to phase verticals anyways. Of course, ladder line has VERY little loss.

Who said the protocols were "out the window"? CB does not require
individual station licenses anymore, but the FCC grants operating
privileges with the understanding that you agree to operate in
accordance with the rules. And the rules still exist.

Gosh Lenny, I think you're misinformed, or just yanking our chains. I
could be wrong. Let's let your boss decide. Try this:

1. Print out the The current Code of Federal Regulations Title 47, Volume 5, Parts 80 to End. (You can find it on the official USG site, or Frank has a copy of it posted here: http://www.cet.com/~yeti/47cfr95_Subpart-D.txt)

2. Bring it to your commanding officer or superior. Tell him this is current US Code and still in force. Show him this relevant section:

Sec. 95.411 (CB Rule 11) May I use power amplifiers?

(a) You may not attach the following items (power amplifiers) to your certificated CB transmitter in any way:
(1) External radio frequency (RF) power amplifiers (sometimes called
linears or linear amplifiers); or
(2) Any other devices which, when used with a radio transmitter as a
signal source, are capable of amplifying the signal.
(b) There are no exceptions to this rule and use of a power amplifier voids your authority to operate the station.
(c) The FCC will presume you have used a linear or other external RF
power amplifier if--

[[Page 537]]

(1) It is in your possession or on your premises; and
(2) There is other evidence that you have operated your CB station with more power than allowed by CB Rule 10, Sec. 95.410.
(d) Paragraph (c) of this section does not apply if you hold a license in another radio service which allows you to operate an external
RF power amplifier.

3. Next, point out this section of Code to him:

Sec. 95.421 (CB Rule 21) What are the penalties for violating these rules?

(a) If the FCC finds that you have willfully or repeatedly violated
the Communications Act or the FCC Rules, you may have to pay as much as $10,000 for each violation, up to a total of $75,000. (See section 503(b) of the Communications Act.)
(b) If the FCC finds that you have violated any section of the Communications Act or the FCC Rules, you may be ordered to stop whatever action caused the violation. (See section 312(b) of the Communications
Act.)
(c) If a Federal court finds that you have willfully and knowingly violated any FCC Rule, you may be fined up to $500 for each day you committed the violation. (See section 502 of the Communications Act.)
(d) If a Federal court finds that you have willfully and knowingly violated any provision of the Communications Act, you may be fined up

to
$10,000 or you may be imprisoned for one year, or both. (See section
501
of the Communications Act.)

4. Tell him that the FCC enforcement division is still actively prosecuting CB rule violations. Check out www.rainreport.com/ for documentation of some recent busts.

5. Ask your boss, given all of the above, if he feels that you as a peace offiicer should be actively violating the Code of Federal Regulations Title 47, CB rules, and also going onto Internet newsgroups and advising citizens to do the same.

>Those who tend to operate illegally want to stay in the dark,<<

That's pretty funny,,,,comedic even.
I used numbers on the air forever until I was baptized in here by the trouble posse that "Aaron" named.

Since they made me an object of their afflict,,,,,er, I mean affection..... I now use "Twistedhed" all over the air on the same freqs every day......people recognize it solely because of this room......that''s not exactly "staying in the dark".
Your hit and run remarks behind a free email veil as opposed to putting your comcast creepy self out there is much more an attempt to "stay in the dark" than any illegalities I may commit on the radio, such as DXing on 555 and/or throwing out 25 watts with my souped up peaked, tweaked and loud export radios.

> like thieves who prefer the cloak of darkness to do their deeds.<<

Like trolls who hide behind their free email accounts.........

> People operating within the FCC rules need not be so paranoid. When I operate I do so according to the rules, and giving my call on the ham bands causes me no concern, I haven't done anything illegal. To those types who seem so paranoid it must be terrible to always wonder if you're going to eventually get caught.<<

The only paranoids are the trouble posse. If we were paranoid, we'd change our handles/numbers as often as you do nics.
Now go wash again.

Because on this group I do prefer to remain anonymous, not because of doing anything illegal, because there are nuts like you whom I had just as soon not know who I am. On the air I am legal and perfectly identifiable, unlike the illegal ops who still have to hide their true identity.
There are groups where I have used my name and call.

No your not bad, but this is the truth. You said your reposting it, and you are, this was posted in here about four years back, I think I have a printed copy of it floating around still, but it should be reposted from time to time, if for no other reason than to give us all a pick-me-up, becuase truth be told, it's the truth about what a truckers life is like.

Another you might try is the Signal Engineering Golden Rod 180. Very impressive for a non-directional. You see very few out there, but they perform well.

They sure do if you don't have a doctors prescription for it, just the same as you can't have a bottle of valiums without your name on the bottle. The drug valium is legal but without a precription it is not.
-
Possession of valium isn't decriminalized in Santa Cruz. It's not even a valid analogy for a myriad of reasons..

Possesion of valium is LEGAL in Santa Cruz, possesing it without a doctors prescription is Illegal same as marijuana, which is still Illegal if you posses it without a doctor prescription. Quite the same Twisty in both you need a docotor prescription for it to be legal. Is possesion of 20 lbs of marijuna in Santa Cruz decriminalized? If you don't have a doctors prescription

Au contraire my flaming homo, you still have nothing to do with this thread. I just want Randy to know what your liable to do so for you to not be a hypocrite and start posting all Randys' screen nic changes. Certainly your against this type of thing so I would expect you to do the same with him as you have with me otherwise you are a troll who has trolled this NG for about 5 years.

I'm not trying to make it out like that and I never did. You are putting words in my mouth because you were wrong with your original challenge to my original post concerning this. I said it was decriminalized in Santa Cruz and you claimed differently.

Sorry Twitsy first off the discussion started with me and tools he said it is Legal in California which it is not, so I don't care what you think you said.

Secondly please post a link or something to back up your claims that Santa Cruz has decriminalized marijuana for those without a prescription from a doctor. It is the least you can do and there should be plenty of info.

Why don't you use your real name on the air, using the moniker
twistedhed is hiding your true identity. Ever give your address on
the air? What do you have to hide? When I am on the air I use my
real name and with my call sign anyone can look up who I am.
Again, what do you have to hide?

> Like trolls who hide behind their free email accounts.........

It should be obvious to the most casual of observer how to contact
me via the free email account, not that it would do any good as it
catches all the spam so I don't have to deal with it in my regular
account.

Let's put this in persepective, shall we?
Who is it that is always concerned with identities? Frank Gilliland and Lelnad KC8LDO head this game and win hands down. Frank posts old satellite pics of my neighborhood (long after I posted my addy for the world to see, along with directions to my doorbell) and sensed self-accomplishment. He then broke his balls trying to find out where I am employed (Smells like "Aaron" familiarity) and continued on with hazard accusations of me living in WV, being a hammie, and having Mindspring as an ISP.
Lelnad posted today that he derives some type of twisted unhealthy pleasure speaking every so often concerning his fantasy of dirty mens' undergarments. And you call us nuts because we freeband and occasionally run some extra watts on our cb? HAhahahhahaha! That's rich.

>On the air I am legal and perfectly identifiable, unlike the illegal ops who still have to hide their true identity.<<

No you're not. You're illegal as hell.

>There are groups where I have used my name and call. <<

Yea, there were,,,this one included until you shamed yourself and were driven underground.

You're really funny twistie boy. When I operate on the air there
are no goofy 'handles' or made up 'numbers', just my real name and
call sign, nothing to hide, don't have to look over my shoulder
because I am not operating illegally.
Your are the one who started the rant referring to licensed hams
about 'fingerprints all over your transmissions'. So just who has
the obsession identities? I operate legally so I don't have to
worry about 'fingerprints all over my transmissions'.

Have one what? A call, well like I said before timmieboy, I was operating with my ham call when your mummy was changing your poopie diapers.

Twisteboy wrote:

Oh, but you got it bad, don't you "JJ"? HAHHAHAHHA!

Since they made me an object of their afflict,,,,,er, I mean affection..... I now use "Twistedhed" all over the air on the same freqs every day......people recognize it solely because of this room......that''s not exactly "staying in the dark".

>Why don't you use your real name on the air, <<

Who uses their real name on cb?
So that's what's bugging you. The exact same thing you are whining about protecting of yourself, you ask another to do the complete opposite. Cb is for handles and numbers.....no call signs needed OR required.

>using the moniker twistedhed is hiding your true identity.<<

Again, it's a handle. Surely even you can figure that out.

> Ever give your address on the air?<

Certainly. I have brought folks in from I-75 to my front door over the radio. Many, many times. Since your're one of those "nuts" concerned about identities and home qth's, go do your google search. My addy is there for all to see.

> What do you have to hide?<

I already told you, nothing. If I had anything to hide, I would attempt to hide my email and my identity. Several folks in this room know who I am and have even met me in person...knnow me by name.
I DX the same time on the same freqs each day, and I take off and return from the same spot each weekend. Really, "JJ", if your curiosity concerning twistedhed has the best of you...c'mon down for a fishing trip. All are welcome, I am very hospitable...just don't come with malice in your heart....Cooter Mae has a knack for spotting trouble....I swear she can smell it coming a half mile away.

> When I am on the air I use my real name and with my call sign anyone can look up who I am.
<<

I don't understand your obsessive preoccupation with identies of cbers unless you want to cause them trouble like Lelnad tries to. Besides, Lelnad claims he has my real addy, I give him permission to post it here to share with all, if that will make you happy. I aim to please. After

all, he does have it, right?<g>

>Again, what do you have to hide? <

"Nuts" are ok for you to "hide" from, but cbers shouldn't have that privilege......just what one would come to expect from the source.

Your hit and run remarks behind a free email veil as opposed to putting your comcast creepy self out there is much more an attempt to "stay in the dark" than any illegalities I may commit on the radio, such as DXing on 555 and/or throwing out 25 watts with my souped up peaked, tweaked and loud export radios.

>Says the webtv'er <

At least I don't have problems spelling and with OE. You're really pissed to be taking OT shots at how I access the web there, "JJ" Hahahah! At least it's my real email addy. See, I don;'t fear these "nuts:. I'm not paranoid. If I was, I certainly wouldn't have went to meet anyone on this board, and damn sure would have gotten anonymous b4 coming here. Besides, I'm nuttier than any of the nuts you can possibly send my way, but I'm living life as I want with no regard to what others think about it.

Like trolls who hide behind their free email accounts.........

>It should be obvious to the most casual of observer how to contact me via the free email account, not that it would do any good as it catches all the spam so I don't have to deal with it in my regular account.<<

Another BS excuse from where we expected it most. I have been posting here for years under the same real email addy and I don't have the problem you have. Maybe you should try webtv or AOL since your shitty ISP allows all that spam into your email and you still look like you are walking backwards with an upside down frown.

Possession of valium isn't decriminalized in Santa Cruz. It's not even a valid analogy for a myriad of reasons.

George erred with:
>Possesion of valium is LEGAL in Santa Cruz, <

But it ain't decriminalized if you're caught with a small amount of it. Pot is.

>possesing it without a doctors prescription is Illegal same as marijuana, which is still Illegal if you posses it without a doctor prescription. <<

Never took issue with it. Regardless, it's still decriminalized for personal possession of small amounts.....valium isn't.

>Quite the same Twisty in both you need a docotor prescription for it to be legal. Is possesion of 20 lbs of marijuna in Santa Cruz decriminalized? If you don't have a doctors prescription<

(sigh) Ok,,,I'll spell it out for you. One illegal valium WILL get you in more trouble than one illegal joint. The penalties are stiffer for valium...why? it's not decriminalized.

I beg to differ, valium in an off itself are not illegal, having them in a
bogus prescription bottle or in a bottle without your name will get you in
trouble. Have one joint and you will get raise the ire of the police
marijuna is still considered illegal, except for possesing small amount in
certain states. Valium are Legal Drugs, pot is Illegal right of the get go
Valium is not, do you hear me boy!

I read the link. It leads to a bunch of anti-government/conspiracy
hocus-pocus helmed by a guy named William Cooper. And speaking of
conspiracies, why is it a steady stream of pirates and militia nuts
have been drifting into this CB NG over the past few months?

Not possible, least at 60 miles. With near perfect atmospheric conditions, extremely low noise level on a totally unused channel with multi-element directional beams it's a long shot. The furthest I was able to reliably reach with the same described conditions was perhaps 30-40 miles using a 5 element Maco.

But George, if this is a cb newsgroup, why are
you and the other Hitler youth from the ham groups hanging
out here?

Landshark

--
If you are implying that people, who
hold ham licenses, should be somehow
held to a higher moral standard than
the "common man", then that would
be faulty logic. A ham license is only
a "permit" to use radio, it is not a
"badge of morality".

Baloney. We did that much with standard base antennas. One was merely held up on the ground by one of those giant wood cable crates. I talked mobile to base when the gal was around 50 miles away. So it's not totally impossible to do. You just need to be in an area where inherent noise is minimal and two good decent systems. I've routinely talked mobile to base alone with around 30 miles to cover.

301. Re: Question for the CB EXPERTS in the Group!

Same here, I have talked mobile to base, base to base and base to mobile in the 40 to 70 mile range with good rigs, antennas that tuned flat or as close to flat as you can get, and only a little power when in the mobile. like 50 watts.

So if the systems work and the noise floor is real low, it can be done.

But the key is good equipment and fairly unpolluted bands.

Ho Ho Ho! Increasing power... Ho Ho Ho! Typicaly the good ol'
ShittizenBandit's way of thinking.
And what about using a real antenna well placed at a good height?
And What is <full legal power>? Say about 4 Watts PEP all over the world
including RegTP, CEPT, FCC and others, except Banana Rebiblic of Bullshit!
Well it's all to you. You've got the bills so don't make it the intelligent
way.

No seriously, to cover up 60 miles the "propagation" won't do it, the
cheapest way is to try with simple wire antennas at a good height. If
they're high enough 500 mW to 1 Watt will be sufficient even in FM or AM
mode

Amateur Radio Newsline™ Report 1311 – September 27, 2002

Amateur Radio Newsline report number 1311 with a release date of Friday, September 27th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Unlicensed stations invade the low end of 20 meters and a tower finding in California highlight this weeks Amateur Radio Newsline report number 1311 coming your way right now.

(Billboard Cart Here)

**

INTRUDER WATCH: WORLDWIDE QRM FROM INDONESIA

Unlicensed stations allegedly operating from Indonesia are causing havoc to the D-X beacon monitoring system on 20 meters. Its interference being heard around the world as we hear from Q-News Graham Kemp, VK4BB:

--
The presence of Indonesian non amateur groups on the various amateur band frequencies in the 40 and 20 meter bands is causing severe concern for all the amateurs of Region 3 and the world over. While they use amateur radio frequencies for their regular communications, you will never miss the many calls for Prayers and the many jokes and Kookaburra pattern of laughing with old men and young ladies together.

The 40 meter band has several channels of 5 kHz intervals from the lower edge and these stations have their breeding grounds here. They graduate to other frequencies and move to 20 meter band, where they are on either side of the International Beacon frequency of 14100 kHz. Many of us in Region 3, cannot monitor any NCDXF/IARU beacons on this frequency.

Even though this QRM from Indonesians has been reported month after month to telecommunications authorities, so far nothing seems to be happening get them off the air.
--

If you hear this QRM, please report it to your nations Intruder Watch coordinator.
(Q-News)

**

RADIO LAW: COURT RULES CITY CANNOT RESTRICT BUSINESS ANTENNA USE

A California Court of Appeals has ruled that a city cannot regulate the type of transmissions that an FCC license holder can broadcast. It also says that a

city ordinance that prohibited a license holder from broadcasting commercially is preempted by federal law. Amateur Radio Newsline’s Bruce Tennant, K6PZW, says what the city of Rancho Palos Verdes was trying to write its own rules on this one:

--
Mark Abrams, WA6DPB, lives in Rancho Palos Verdes California. He is an amateur radio operator and with city approval, Abrams built a 40-foot antenna and 52-foot antenna in the backyard of his home. The city’s approval of the towers was contingent on their use being limited to non-commercial applications only. Abrams is also the owner of a business that sells and services two-way radio equipment and holds 76 licenses issued by the FCC which permitted the use of his antennas for commercial purposes.
--
Abrams: Audio Onlt at www.arnewsline.org.
--

Abrams says that he never used the two city-approved towers to receive or transmit on frequencies for commercial use. Instead, he used portable antennas mounted on tripods in his backyard and on a mobile tower trailer which he parked in his side yard.

But in 1998 and 1999, the City of Rancho Palos Verdes monitored radio transmissions from Abrams's property and detected the commercial use of frequencies. The City stated that these transmissions were in violation of an ordinance that required FCC licensees to obtain a conditional use permit from the city's planning commission to operate commercially.

--
Abrams: Audio only at www.arnewsline.org
--

The City of Rancho Palos Verdes and State of California filed an action seeking an injunction to bar Abrams from, among other things, operating his antennas for commercial purposes. Abrams answered the complaint and filed a cross-complaint of his own. It he claimed that federal law preempted the City's ordinance because it prohibited the use of frequencies allocated to him and his customers by the FCC.

--
Abrams: Audio only at www.arnewsline.org
--

The court says that he can use his antennas for commercial purposes without a city permit. It says that federal law preempts the City's ordinance banning such use because the Rancho Palos Verdes requirement that Abrams obtain a permit to transmit a commercial broadcast was preempted by federal regulation. It says that Abrams's FCC licenses enable him to operate commercially on certain frequencies and the City of Rancho Palos Verdes limitation on his rights are in conflict with federal law. And that’s good news for WA6DPB.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, reporting.
--

The Court concluded the City does hold zoning authority, but such authority is limited to the placement, construction, and modification of facilities used for commercial mobile radio services only. (ARNewsline™)

**
RADIO RULES: UPDATE ON NTIA VS. PROPOSED 5 MHZ HAM BAND

Some good news concerning the National Telecommunications and Information Administration opposition to a new Amateur service allocation at 5 Mhz. This from ARRL President Jim Haynie, W5JBP, and General Counsel Chris Imlay, W3KD who say that they are now optimistic about reaching a resolution to issues that could otherwise block plans for the band.

The two met with representatives of the government agency to discuss the NTIA concerns. Haynie says that they came away with a feeling that the NTIA was willing to work with the ARRL to resolve concerns. Until surprise opposition surfaced the FCC appeared to have put ARRL's request for a new, domestic-only, secondary amateur allocation at 60 meters on the political fast track. (ARRL Bulletin)

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Three Rivers Amateur Radio Club repeater serving Philadelphia Pennsylvania.

(5 sec pause here)

**
RESCUE RADIO: HURRICANE ISADORE STRIKS

On Tuesday, September 24th, the FCC declared that a general communications emergency existed for Alabama, Florida, Louisiana, Mississippi, and Texas. This as hurricane Isadore approached the region.

The declaration requires amateurs not use 3.873 MHz during hours of darkness and 7.285 MHz during daylight. Both frequencies are to be protected plus or minus 3 kHz. Only amateurs taking part in the handling of emergency traffic are to use these 6 kilohertz slots.

The FCC said the communications emergency could last as long as 14 days but it actually remains in force until its rescinded. Keep an eye on the ARRL website newspages for ongoing updates on ham radio involvement in this emergency. Its in cyberspace at www.arl.org (From ARRL bulletin.)

**

HAM RADIO IN SPACE: V-U-SAT’S MESSAGES FROM ORBIT

A new ham radio satellite to be launched by India wants to carry your message. This, according to VU2NUD who is the coordinator for Amsat-India.

VU2NUD says that V-U-SAT will carry a beacon system with the ability to play back pre recorded messages on command. They will be transmitted in F-M voice

for all the world to hear and your words could be among those it broadcasts from space. Here's how:

Think of short, meaningful and apropos messages no longer than 15 seconds in duration. It could be related to ham radio space operations, amateur satellites, famous quotes, sayings or whatever. Then send it along to VU2SBJ by e- mail to sri@ebhats.com and a copy to ham@vsnl.com. Mark clearly in the subject: Message for Beacon. Then wait to see what V-U-SAT eventually has to say. (ANS)

**

ENFORCEMENT: FCC SETS ASIDE LICENSE RENEWAL

The FCC has notified Scott E. Kamm, of Sioux City Iowa that it has set aside the renewal of his Technician class license grant for N0UGN. The Commission said it took the action based on recent complaints about the operation of Kamm's station and questions regarding his qualifications to be a licensee.

The FCC notes a Warning Notice by the Enforcement Bureau sent to Kamm last February 5th. The agency says that the warning was related to Kamm's alleged use of transmitting equipment on 156.300 and 174.000 MHz without a license, and deliberate interference to an Amateur repeater operating on 146.910 MHz. The letter also pointed out that Kamm's address in the database was incorrect. And subsequent to that warning notice the FCC says that information came to its attention that Kamm had apparently provided radio equipment to an unlicensed minor residing in Waterbury, Nebraska, and had instructed him on how to operate on the Marine Band and other frequencies.

In his February 11th response to the FCC Warning Notice, Kamm denied setting up radio equipment for the minor, and also stated that he had sold all of his radio equipment. But the FCC says that it has all of these complaints under review and that Kamm will be hearing from the agency again in the not to distant future. (FCC)

**

SAFETY ALERT: FLUKE METER RECALL

Test equipment manufacturer Fluke Corporation has announced a voluntary recall of certain models of its digital multimeters. This because of a delay in readings on the A-C scale above 500 volts.

According to a company release, the meters can take more than 18 seconds to reach a final reading. This could lead users to think that the voltage is lower than it actually is.

The meters involved in the recall are models 175, 177 and 179 of which 17000 were sold in the United States. All of the recalled units have a serial number below 79000000 and were sold between January and October 2001. If you have one, please call Fluke toll-free at 800-260-4819 between 8 AM and 7 PM weekdays Eastern time. More information on the recall can be found in cyberspace at www.fluke.com/rma/default.asp. (Fluke press release forwarded by WA6ILQ)

**

SAFETY ALERT: KODAK DC5000 DIGI CAMERA RECALL

A recall on a popular digital camera. Amateur Radio Newsline’s Norm Seeley, KI7UP, has the shocking details:

--
If you own a Kodak brand digital camera model D C 5000, listen up. Eastman Kodak Co. is recalling about 75,000 of these cameras because of a possible manufacturing defect that can cause electrical shock.

According to news reports, the recalled cameras bear the model number DC5000 on the lower front right-hand corner. The cameras also carry a plate on the bottom containing the Kodak product identifier code KJCAA, followed by an eight-digit serial number ranging from 01800001 to 11700825.

The cameras were sold at department, electronic, computer and camera stores as well as mail-order and Web sites from June 2000 through August 2002. Consumers can return the cameras for free inspection and repair by contacting the company at 1-888-793-2977 between 9 a.m. and 8 p.m. Monday through Friday Eastern Daylight Time.
--

Again, if you own one of these cameras, please contact Kodak at 1-888-793-2977 between 9 a.m. and 8 p.m. Monday through Friday Eastern Daylight Time. (Kodak press release)

**

HAM RADIO ON TV: ICOM JOINS “THE HUMAN RACE”

ICOM America has been named the high frequency communications provider for the television shoe The Human Race. ICOM America has already shipped an IC-706 Mark II G to Boston for use by the show. The IC-706 and additional equipment will be used during an upcoming trek along the actual travel route to be used. The donation is the result of an agreement recently reached between ICOM America's National Sales Manager Ray Novak, KC7JPA, and the shows producer Bill Desjardins, W1ZY. (THR)

**

CONFRENCES: WSWSS IN CERRITOS CA

The Western States VHF-UHF and Microwave Conference is slated for October 11, 12 and 13 at the Sheraton Cerritos Hotel Towne Center in Cerritos California. Hosted by the Western States Weak Signal Society, the conference provides VHF and UHF enthusiasts the knowledge and tools to work DX and contests on 6 meters and up. This years banquet speaker is ARRL 1st Vice-President and VHF/UHF contester Joel Harrison, W5ZN. More information is on the web at www.wswss.org. (WSWSS)

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

RADIO HISTORY: PEARL HARBOR REPORTER S.K.

He wasn't a ham, but Hugh Lytle was a communicator in his own right. History remembers Lytle as the man whose teletype message provided The Associated Press and the world with the first account of Japan's sneak attack on Pearl Harbor back in 1941.

Lytle was the news services Honolulu correspondent and a reserve Army officer. He was awakened by the Army on December 7th as Japanese planes bombed the U.S. fleet. According to his son David, Lytle quickly left for his A-P office at the Honolulu Star-Bulletin, where he filed a brief account of the attack in progress. He then reported for military duty with the Army.

A few weeks ago on August 16th Hugh Lytle passed away. He was 100 years old. (Published reports)

**

HAM TRAVEL: FREE ACCOMMODATIONS FOR HAMS ON THE GO

From across the Atlantic comes word of an interesting program for hams who like to move around. The International Travel Host Exchange, or I-T-H-E is a program administered by the German national society, D.A.R.C. It provides radio amateurs with the possibility of free accommodation with other amateurs around the world in exchange for other hams offering accommodation to overseas amateurs.

Most International Travel Host Exchange members are in Europe, but there are also amateurs registered in Australia, Canada, India, Indonesia, Japan, Malaysia, New Zealand, Syria, Thailand and the USA. Once registered, postal or e-mail addresses are made available so that contact can be established well before any visit takes place. For more information please contact Thilo Kootz, DL9KCE by e-mail to dl9kce@darc.de.

**

SCIENCE AND TECHNOLOGY: NEW GRAYLINE STUDY REMAILER

A new Internet newsgroup has been set up to discuss and coordinate the current research into greyline propagation by the RSGB Propagation Studies Committee. It is with Yahoo and people can subscribe by sending an empty e-mail to greyline-subscribe@yahoogroups.co.uk

Yahoogroups is also the home of the Amateur Radio Newsline e-mail list you subscribe to it by sending a similar empty e-mail to arnewsline-subscribe@yahoogroups.com. ARNewsline is one word spelled a-r-n-e-w-s-l-i-n-e.

**

HAM RADIO IN SPACE: RS-12/13 - S.K.

The AMSAT News Service and the ARRL Letter both report that the Russian Radiosport RS-12/13 ham satellite appears to have died. Jerry Brown, K5OE, reports he's received word from Russian sources that RS-12/13 went dark as a result of severe solar flare activity in
July and August.

At airtime, efforts are under way to restore the satellite, but hopes for success are dim, according to Brown's Russian acquaintances. RS-12/13 were integrated into the COSMOS 2123 Russian navigation satellite, launched February 5, 1991. It’s beacons have not been heard since August 20. (ANS, ARRL Letter)

**

INTERNATIONAL - AUSTRALIA: CB RULES ARE CHANGING

The Australian UHF CB equipment standard is to change. The new standard will require that CTCSS equipment include facilities to reduce interference to non CTCSS users. Required features include a 'channel busy' warning light and a 'listen before transmit' function. The changes were required by the Australian Communications Authority following changes that legalized CTCSS signaling on UHF CB channels. The A-C-A has also informed the Australian Association of Citizens Band Radio Operators that once the standards are approved by Standards Australia, they will become compulsory for equipment manufacturers. (Q-News)

**

DX

In D-X, word that KF2XN is active as KH2 slash KF2XN from Guam for at least the next month. He operates mostly SSB in his spare time. QSL as directed on the air. (RSGB)

And BI7DX is an Isands on the Air expedition that will operate from Weizhou Island throuhgh the 4th of October. Weizhou Island is located in the Gulf of Tongking in South China with team members comming from four different Chinese provences. The operation will be on SSB and CW from 40 to 10 meters, including the WARC bands. (RSGB)

**

THAT FINAL ITEM: THE BIRDS ARE BACK

And finally this week, our favorite flying T-Hunt is about to start. This, as the famed radio tagged burrowing owls take flight once again. With the details, here’s Joe Moell, K0OV.

--
It's that time again -- migratory birds in the Northern Hemisphere are heading south for the winter. For the fifth year, ham radio operators and scanner fans are being asked to use their equipment to help wildlife biologists figure out the routes and final destinations of endangered Burrowing Owls. In previous

years, hams helped determine that owls hatching during summer months in the Canadian provinces of Saskatchewan and Alberta travel over central states from North Dakota to Oklahoma, ending up in southeast Texas and northern states of Mexico. They sometimes fly over 2000 miles to their winter homes.

There aren't any radio-tagged Canadian owls to listen for this fall, but the University of Arizona is asking for ham help with 53 transmittered owls from eastern Washington state. If you live in the western USA and can receive 150 MHz signals, you could help. Your scanner or extended-range hand-held ham radio transceiver, plus an outside antenna, are all you need to join in. If you have radio direction finding equipment for VHF, so much the better.

For all the frequencies and monitoring information, go to the usual place on the Web, www.homingin.com (HomingIn is one word.) If you aren't on the Web, send postal mail to my callbook address. Again, the Web site is homingin.com

Thanks in advance for your help. From southern California, this is Joe Moell K-zero-Oscar-Victor for Amateur Radio Newsline

--

Once again, more information is in cyberspace at www.homingin.com. (ARNewsline™)

wow were you talking between a mountain? 60 miles is no problem with two base station radios running sideband with a decently high antenna's at night when there is no noise. it wont be possible at all during the day for another couple years
-
No doubt. I talk to Lakeland on a regular basis, Orlando, Punta Gorda, fishing boats from here to Texas and the Fla straits. I have even talked to 413 over on the other coast (AM) near Daytona once, but with 100 watts at the time on a 5/8. Granted, it's flat here, but I have done way more than 60 miles from the mobile no problem on SSB on the road many times.

"JJ" wroted, while sleeping behind the comcast veil:
>You're really funny twistie boy. When I operate on the air there are no goofy 'handles' or made up 'numbers', just my real name and call sign, nothing to hide, don't have to look over my shoulder because I am not operating illegally.<<

Well, all we have is your word on that. You keep bringing up hammie radio as a means to compare to illegal cb radio, yet fail to ascertain what you claim....and that's ok....I couldn't care less who you are or what you call yourself.....but if you reiterate over and over that you are a nocode hammie, it must mean something to you and saying it over and over without putting it forward is merely another troll. Handles have been around forever on cb. Bitching about players that come to the game years after the standards have been employed is akin to pissing in the wind.
It's not like everytime the mic is keyed we're illegal, "JJ".
I spend much of my time on a local LEGAL channel, I spend much more time scanniing than I do talking.
-

>Your are the one who started the rant referring to licensed hams about 'fingerprints all over your transmissions'. <<

Better go back and read who started the thread. Twasn;t I, but I do understand your juvenile obsession to "get even" after I made you aware of your errors. Sorta like Lelnad, only this incarnation isn't as rabid....yet.

>So just who has the obsession identities?<

The trouble posse...Frank Gilliland searching for pics of my house and dying to know my employer, Lelnad KC8LDO wanting my address more than he worships Jesus, speaking of his filthy obsessions with mens underwear. Shall we continue? "Aaron" (when he is Frank) threatening to contact people's employers. YOU asking for real names.....Jeez, "JJ"...it's not rocket science.

>I operate legally so I don't have to worry about 'fingerprints all over my transmissions'. <

I never worry about any of my transmissions. I have no need to. What good are electronic "fingerprints" when the feds can pinpoint my transmissions from Laurel, MD in a split second IF they really wanted to. See, that word "IF" always bites ya' in the azz!

>
> Thanks.

Hi,

Yes, it's very possible...and with all legal gear too. I routinely talk with my father who lives in a large metropolitan city about 60 mi. west of my QTH. First off, you'll need directional antennas. I'd recommend that you both get MaCo M-103 3 el. Yagis. They're cheap and effective. Are they the "Cadillac" of beams? No, but at about a bill per, they're a good value. (If you can, replace the stock hardware with stainless steel.)

Next, use really good coax. I'd recommend Bury-Flex by Davis RF. It costs a few cents (literally) more, but the return, in the form of additional shielding and overall quality, is well with it. Nuff said!

Ah, the radios. Any really good sideband set will do the trick, HOWEVER, a good receiver is what you want the most. So, get on ebay (or whatever) and try to hunt down a NIB Uniden Grant XL or LT. The LT is more prevalent now and can still be had for a little over a bill. Those that have new XLs generally don't want to part with then...and for good reason. One of the best receivers in the biz. If your budget allows for it, I'd add a CBCI Channel Guard IF filter and a SP-1a speech processor. These are both legal and will GREATLY enhance your ability to hear & be heard. The Channel Guard will increase your ACR (Adjacent Channel Rejection) and defeat 99% of the "splash" associated w/urban ops. The SP-1a speech processor will increase your average modulation without exceeding 100% or overmodulating like may amplified mics can. This reduces any interference you might otherwise cause while giving your audio punch with increased "intelligibility." (i.e. Loud & clear as opposed to loud and distorted.) BTW, the Galaxy DX 2547 base station is a good choice too. (Add the same extras.)

Then the standard stuff applies. Be sure to provide a good RF ground for your setup and don't be discouraged during periods of high static, it's part of the big picture. I run a Uniden Grant XL (w/CG & SP-1a) feeding an 80-meter dipole via a tuner and my father runs a Radio Shack TRC-485 feeding a plain-Jane 1/2 wave dipole...and we both do just fine at 12 watts apiece.

He has a slight advantage as his dipole is on top of a three-story brownstone at approx. 75 ft., but it's still just a dipole. Perhaps I'll upgrade him to a 2 or 3 el. yagi, but that's another project for another day. If I can provide any additional info or if you have any questions/concerns, drop me an e-mail. (Remove the NOSPAM though.) Take care and best of luck. :-)

George again erred with:
>I beg to differ, valium in an off itself are not illegal, having them in a bogus prescription bottle or in a bottle without your name will get you in trouble.<

Which would make the valium on YOUR possession...ILLEGAL....and a much heavier penalty than a doobie.

> Have one joint and you will get raise the ire of the police marijuna is still considered illegal, except for possesing small amount in certain states. <<

Which is what my original post claimed..that it was decriminalized in Santa Cruz. You claimed it wasn't...you were wrong.

>Valium are Legal Drugs, pot is Illegal right of the get go Valium is not, do you hear me boy!<<

Both are legal in Santa Cruz with a prescription. One illegal valium vs. one illegal joint will carry a harsher penalty. Why is that so hard for you to comprehend? Admitting an error kills you doesn't it? I base this on your obvious anger.

couple
> years

Right on, Tim. Re. daytime operation, that's where the CG also earns it's
keep. It provides an aditional stage of amplification while increasing ACR.
How many times have you ever tried to copy "a weak one" with a hi-po station
a channel or two away "spalshing" the bejesus out of you. I've noticed that
I've been able to pull some weak ones right out of the noise floor now.
Can'r recommend it enough. BTW, how the heck are you? :-)

You miseed a key point in his specifications: Reliable.

Anyone who has been on CB for any length of time has stories of long
contacts that took place under ideal conditions. Heck, I've talked to
stations 80 miles away, that were not moving the needle, but I could
hear because the noise was extra quiet that night.

But could you do that day in and day out? Taking into account the pesky
interference that skip causes, not to mention other sources of noise,
and the traffic of other stations? Doubtful. My experience with daily
contacts usually nets about a 20 mile limit reliably.

This is also assuming legal power, and antennas, with reasonable
terrain. YMMV if you introduce variables like top of mountains, or
higher than legal power.

327. Antenna Suggestion

Newsgroup: rec.radio.cb
Date: 2002-10-04 17:06:49 UTC
From: Bert Craig <wa2si@arrl.netNOSPAM>
Message-ID: <OXjn9.8397$GF5.205559@news4.srv.hcvlny.cv.net>
Source record: 139107

Hi everybody,

The recent thread discussing impedance matching, field strength, and SWR kinda made me want to make a suggestion for some of you folks who are getting ready to erect an antenna of some kind. Why not put up a dirt cheap wire dipole? "How big?" you ask. As big as your lot will support. I run a 40-meter dipole (approx. 66 ft. long) and feed it via ladder-line through a tuner. This is not only my ham antenna, but my CB antenna too. It puts out a nice signal and I can use the tunner to allow my rig to deliver all of its power regardless of what channel I'm operating on. Funny thing is I took the tuner off-line and my SWR only rose to 1.4:1, not bad. I use a commercial 40m doublet fed with 600 ohm ladder-line. Great value at $35, IMHO.
Here's the link.

http://www.w7fg.com/ant.htm

To roll your own, go to Radio Shack and pick up a 50 ft. length of "300-Ohm Low-Loss Twin-Lead TV-Antenna Cable." It's got "20-gauge copper conductors with polyethylene-foam insulation and weather-sealed jacket." In other words, good stuff and cheap too. (I paid all of $6.) The part no. is 15-1174 and here are some reviews.

http://www.eham.net/reviews/detail/1750

While you're at RS, grab their 70 ft. roll of 14 gauge stranded copper antenna wire for an additional $3. I use an external 4:1 balun or you can use the one that comes in most tuners. The reason I went external is that I prefer a current balun as opposed to the voltage balun used in most tuners. This better keeps any RF out of the shack...but at lower power levels, is usually not a problem. A good dogbone center insulator can be had at either RS or Home Depot in their electric fence dept., no biggie. If you want a good commercial balun, try here.

http://www.radioworks.com/index2.html

...or the best, go here.

http://www.baluns.com/balun.htm

Remember, use a 4:1 current balun. Now for a good affordable tuner that you can potentially grow with and not break the budget. How about...

http://www.mfjenterprises.com/products.php?prodid=MFJ-949E

That'll do it. This was my first tuner and despite not being much of a MFJ fan, I gotta say it did a great job. At $149, it's a good investment too. So run that 66 ft. dipole into the trees, (Trees make GREAT cheap towers!) run that 50 ft. length of low-loss ladder-line down to your tuner, and tune for

1:1 SWR and I'd wager you "end-fire" a better signal than any A-99, plus if you ever decide to get more RF real estate via ham radio...your antenna's already in place. Good luck now. :-)

Right here. It's you hating to see your name posted. It's you freaking out and protesting it's not true. It's you still here fretting in this thread long after someone who wasn't Steve would have been long gone. The proof is you, Steve.

Subject: The Big V followed me! Some of you may be infected by this "troll" not w-w!
Newsgroups: alt.religion.w-w-church-god
Date: 2002-03-07 10:24:48 PST

Hi Jamey, My name is Woody Parr and I'm up the road in Cornelia. I'm afraid that I'm indirectly responsible for this troll who is badmouthing you at alt.religion.urantiabook. You see he was only there in the first place to attack me.

This idiot is Steven J. Rogovich, 1612 Lake Christopher dr. Virginia Beach, Va. 23464 He followed me to the UB usenet page from alt.radio.pirate He and I (were) both formerly loosely associated with each other in the shortwave pirate radio listening hobby. I USED to be a shortwave pirate but my station has been permanently retired for more than 2 years now. Stevie is still a pirate and is the operator of the station Radio Free Speech. He is also the moderator of a message board at the Free Radio Network < www.frn.net > and goes by the handle of Pat Murphy there. I had a falling out with the people at the FRN a couple of years ago as they became corrupt and were doing so inappropriate things. I dared to open my mouth and openly complain about there stupid activities which since they havn't yet ceased to follow me around the internet anywhere they can and attack me.

Steve is also on the usenet trolling people under the name of Richard Cranium (richardcranus@yahoo.com) He's far too much of a coward to debate anyone using his real name.

Hi Twist. No threat, veiled or otherwise. But it does seem a tad
irresponsible for a sworn police officer to gleefully
(..."YEEE-HAWWW!"...) announce that he is operating a prohibited
transceiver illegally on the Citizens Band...proclaim that illegal
power amplifiers are necessary to communicate...and announce that CB
is no longer regulated and is a "free for all". People who are trying
to decide whether or not to operate within the law are likely reading
this newsgroup. IMO, Mr. Stover has a responsibility to see that any
information he posts here is accurate and reflects actual -not
estimated- FCC policy.

Jerry:

I pull rail containers for a living, and believe me, there is no shortage of non-railroad drivers pulling them. The fact of the matter is, a truck driver is STILL a necessity, regardless.

As for warehousing, apparently you don't realize that there are not nearly enough rail containers to handle the amount of traffic you're talking about putting on the rail system. Not to mention the fact that there aren't nearly enough RAILS to move all the freight.

Add in the time factor. What about perishable goods such as Produce? Sure, refrigerated rail containers exist, but do you really want lettuce that's been in a rail container for two weeks, or lettuce that's been in a truck for three days?

The fact of the matter is that if the trucks stop, so does this nation. The rail system can't handle the amount of goods we ship and consume in this country.

From one HAM to another, the same arguments you're using against truck drivers can be used against HAM radio.. HAMs aren't necessary because the police can handle all the emergency traffic necessary, all the time, on time, every time. Right?

I don't think so either, but please take a step back and look at it.

It may be posible i would sugest you ground the antenas to your house water pipes as this helps on rx as we all know the beter the ground plane the better and clearer the rx. I would also say put a 50 watt burner on both rigs as the standerd 4 watts is not suficent for the distance required unless its ssb and the atmasferics are right i.e midle of summer during sun down.
Or the only outher alternative would be to buy two uhf transmiters like the council and taxi firms use

New Post about Channel 22
(just to make "Crossfire"(Texas) happy, (poor bay-bee),I'll refer to them as "duck-pluckers" for now on.)

-

Uh-oh.
I seen me an FCC van sittin' near Forest Hill Ave.

Look likes theys gonna bust somebody's ass.

Did you know, that channel 22-Crew be on "good behavior" when "Uncle Charlie" pays a visit? Just like clockwork!
Linears shut off
Everybody gets "quiet"
Someone in da FCC calls them up and tells the ring-leader that the FCC comin' to town.

When the van leave Richmond, the phone call is made to da ring leader lettin know that the FCC left.

Who be the ring-leader on Channel 22?
Who in da list belows is da ring leader?

Cannon-ball

Another veiled threat coming from the self-proclaimed leader of the
trouble posse.
You pulled the same garbage with Dennis' employer and he's still here.
And you're still whining about being impotent.
-
>Hi Twist. <

Well, since we're dealing with several "aarons", I guess I can reply to
"this" Arron since he doesn't seem as pissed offf or rabid as the
others. Hello and good day.

>No threat, veiled or otherwise. But it does seem a tad irresponsible
for a sworn police officer to gleefully (..."YEEE-HAWWW!"...) announce
that he is operating a prohibited transceiver illegally on the Citizens
Band..<<

Irresponsibility was never a crime.

>.proclaim that illegal power amplifiers are necessary to
communicate...and announce that CB is no longer regulated and is a "free
for all".<<

Well, amps do help,,especially during the day when all the skip is
running, but I'd rather find a nice quiet off channel on the freeband
than run a buncha power. To me, and in my certainly humbled opinion, it
is the lesser of the 2 evils.

> People who are trying to decide whether or not to operate within the
law are likely reading this newsgroup. <<

Then they can see that the feds don't give a rats azz about low power
freebanding above the legal 40 but below 10 meter (especially 555) as
long as there are no safety, interference, etc., legitimate complaints.
Hell, even running amps (to a point) seems relevantly harmless unless
you're in a very populated area, otherwise the feds would make it a
priority..

>IMO, Mr. Stover has a responsibility to see that any information he
posts here is accurate and reflects actual -not estimated- FCC policy.
-Aaron-<<

I can appreciate your position while disagreeing at the same time
without prejudice. I believe it was merely an interpretation,,,,one that
is somewhat accurate of the current state of cb. Many of us know from

experience what to expect from the FCC, IE: which behavior causes problems and what type action the feds will take. Most cbers know that the heavy hand of enforcement by the FCC is not what certain types on this board would like it to be, despite the false and oft reiterated claims to the contrary.

>I have 2 regulated 10 amp 13.8 v power supplies. can I combine these for 20
>amp output?

Yes, but not directly. Use each supply with a power resistor so the
current will be shared by both supplies equally. This will also
prevent one supply trying to regulate the other supply (which could
burn out one or both supplies very quickly). It doesn't take much
resistance on each supply, less than 0.1 ohm. You can get this just by
using a longer power supply line.

One good way to get that resistance and make it useful is to add a RF
choke to the output of each power supply. You can make one yourself
just by winding several feet of wire around a large bolt.

Whoa! What happened with the denominator?

>The efficiency is seen to increase as Icq increases up to the point
>where Icq=Imax/2. Above this value of current, the peak voltage swing
>is limited by the saturation of the transistor. As Icq increases above
>Imax/2, the maximum possible voltage swing decreases and the input

>
> (Vcc)^2 / (8*RL)
>Nmax = -------------------- * 100
> Vcc*(Imax / 2)
>
>Since Imax = Vcc / 2

Wrong. Imax = (Vcc / 2) / RL

>Nmax = 25 percent

Try again. Take your Nmax equation and drop in some correct figures:

Vcc = 180 volts
RL = 100 ohms
Therefore, Imax = (180 / 2) / 100 = 0.9 amps; and

(180)^2 / (8*100) 40.5 watts
Nmax = ----------------- = ---------- = 50%
180 * (0.9 / 2) 81 watts

>That'll do it. This was my first tuner and despite not being much of a MFJ fan, I gotta say it did a great job. At $149, it's a good investment too. So run that 66 ft. dipole into the trees, (Trees make GREAT cheap towers!) run that 50 ft. length of low-loss ladder-line down to your tuner, and tune for 1:1 SWR and I'd wager you "end-fire" a better signal than any A-99, plus if you ever decide to get more RF real estate via ham radio...your antenna's already in place. Good luck now. :-)

73 de Bert
WA2SI
<<

Did you have a bad experience with an MFJ product, Bert? I ask only because I became interested in such things over the past few years and have no real experience with any other tuner to compare it to.
There is a fella up the coast from me that has his A-99 at the top of a giant pine tree and just recently another reg on the group threw one way up sky high in a near cloud touching tree and it took either a crane or one big azz cherry picker to do it. Them trees are great towers...I do it all the time with bungee cords when camping.

Great suggestion Bert! Just remember, everything is a compromise. If you never plan on talking anywhere else other than 11 meters, its best to get an antenna built for that band.

I know my Interceptor 10K will outperform your wire anyday (and you know it too)...

BUT

...it is not for everyone and I can't use it on 40 (like you).

Now maybe they could cut the wire for 11 meters, run it with open feeder line direct to the tuner than they won't need a balun.

If they want to feed it with coax, then they will need the 4:1 balun.

Dino

Isolate the two power supply outputs from each other with diodes.

I doubt if he can fit it into his tight schedule. He has far too much
"akc" work to do... no time for playing about with things like radios.

Regards,

Peter.

> with simple tuning.

Yes, they do turn up easily, as do the Rangers, Emperors, etc.

What's that grumbling noise from the "akc" camp... something
about "typical keyclown mentality" ;~)

> A single 1969 or 2312 is good
> for around 25 peak in typical circuits.

I have known the 1969 used in small amps but, with the Lincoln
being designed to use the 477, I have known sets to put out
about 15 to 17 Watts with the 1969.

> > I am not too keen on the MRF455 conversion, it is much
> > better to fit a transistor that slots straight in.
>
> I like the 455 conversion the way Uniden does it on
> the new Lincolns. It's really pretty simple.

I haven't seen the new Lincolns. Have they started using
the MRF455 on the new models straight out the factory?

I do not think that this is something that should be attempted
by beginners. There are issues regarding correct mounting for
maximum heat transfer. Some of these transistors contain
beryllium oxide (to improve heat transfer)... beryllium can
cause lung disease if inhaled. Care should be taken not
to break the transistor.

A modification sheet I have here gives details of fitting an
MRF455, but also suggests that the 477 can be replaced
with an MRF497.
It's probably no easier or cheaper to obtain, but do you
have the spec on that one?

Regards,

Peter.

> and correct now.

I don't like those on-line site editors or uploaders. I prefer to do
the design off-line, then upload with an FTP program.

On this side of the "pond", it seems quite common for ISPs to close your
account, with the loss of your site, if you do not connect through their
servers regular. Much of the Internet was paid for by advertising, but the
bubble has burst. Some advertisers are becoming wise to the fact that
Internet advertising is not always cost-effective.
So many sites have flashing banners and graphic links, you end up ignoring
them. I never click a banner or flashing advert, mostly I do not even
notice them now.

The service providers have to find other ways to make their money.
Bravenet introduced premium services, which are paid for but better than the
standard free services. Some other sites force you to go to their sponsor
before you can see what you asked for. Bravenet also use this, when you
request one of their services, you must visit their "sponsor" to activate
the service.

In the UK, ISPs are going under or being bought out by Tiscali.
One of the problems for them is the "unmetered" accounts. Customers are
going more for these, so they have to provide them or lose customers. The
telephone company (BT) provide the lines and modems for the ISPs... so
control the prices. The amount they charge for a modem ensures that the
ISPs cannot compete on price unless they have a high contention ratio and
so provide a crap service.

The Internet is not the big money spinner that it was. I wouldn't be
surprised if there are some big changes in the next couple of years... At

the rate they are going, Tiscali may end up owning every ISP in the UK. So, how are Tiscali doing so well? Simple, they are completely happy to provide the worst service in the UK. They do not need to "win" new customers... they just keep buying them.

Regards,

Peter.

> -Aaron-

"Fretting"? Do you even know what the word means? To you it's a way to deflect the original question. YOU may be "fretting", but I'm not. I'm just waiting for the PROOF you said you would "Gladly" post and cannot. Mere repetition is not proof, dimbulb; so where is it?

And why should I leave? You haven't, and you've been proven to be a complete nincompoop. You didn't know that ten meter radios were legal for licensed amateurs to use on ten meters. You didn't know that Novice and Tech+ license holders could use part of ten meters. You claimed that all ten meter radios were somehow "illegal". You claim to be pro-Rules, yet you encouraged a guy to get his new amp modified for CB. And all can be found in the Google Archives, so don't try to deny it. You have proved only that you have no clue what you're talking about.

So, as the old BK commercial used to go, "Where's the beef?" Where's your PROOF, Aanal Aaron? Not repetition this time; PROOF.

>others. Hello and good day.

Corrections:

1.There's only one Aaaron, and you're talking to him.
2. The only rabidity and pissed-offedness in this thread is coming
from you.

>>No threat, veiled or otherwise. But it does seem a tad irresponsible
>for a sworn police officer to gleefully (..."YEEE-HAWWW!"...)
announce
>that he is operating a prohibited transceiver illegally on the
Citizens
>Band..<<
>
>
>
>
>
>Irresponsibility was never a crime.
>
>

I don't know about you, but I'd want to know the police officers hired
in my town were selected on the basis of their ability to act
responsibly.

>>.proclaim that illegal power amplifiers are necessary to
>communicate...and announce that CB is no longer regulated and is a

"free
>for all".<<
>
>
>
>Well, amps do help,,especially during the day when all the skip is

>than run a buncha power. To me, and in my certainly humbled opinion,
it
>is the lesser of the 2 evils.

That's your opinion and you're entitled to it. Supporting illegal
operation has some built-in disadvantages though. It labels you as
irresponsible and unlawful. These are not traits that people in
general find trustworthy.

>
>
>
>
>
>> People who are trying to decide whether or not to operate within
the
>law are likely reading this newsgroup. <<
>

>
>Then they can see that the feds don't give a rats azz about low power
>freebanding above the legal 40 but below 10 meter (especially 555) as
>long as there are no safety, interference, etc., legitimate
complaints.

If they looked closer they'd see that several amateurs have indeed
been busted for "freebanding" and running illegal power on the legal
40 in the last year (case files available in the FCC enforcement
logs). Truck stops are being cited for selling non-type-accepted CB
gear. eBay auctions for illegal CB amps continue to be stopped.
Operating in open defiance of FCC rules whether you're a ham or not
doesn't make sense, except perhaps to antisocials and misfits.

>Hell, even running amps (to a point) seems relevantly harmless
unless
>you're in a very populated area, otherwise the feds would make it a
>priority..

With cutbacks in funding, it's a given that the FCC can't make
enforcement in ANY radio service a "priority". They can't be
everywhere at once. However that doesn't automatically signal that the
entire spectrum is "a free for all".

>
>

>I can appreciate your position while disagreeing at the same time
>without prejudice. I believe it was merely an interpretation,,,,one
that
>is somewhat accurate of the current state of cb.

But his interpretation is not accurate as to the current state of Federal Regulations governing CB. It is in fact, harmfully erroneous. For example, there have been no statements issued by the FCC to the effect that the old RF power rules may be ignored due to increasing use of the band. If anything, CB sales have declined since the 1970's boom. Finally, current Title 47 CFR states that external CB amplifiers are prohibited - and there are no exceptions to this rule, (not even for police, fire, and public service).

> Many of us know from
>experience what to expect from the FCC, IE: which behavior causes
>problems and what type action the feds will take. Most cbers know
that
>the heavy hand of enforcement by the FCC is not what certain types on
>this board would like it to be, despite the false and oft reiterated
>claims to the contrary.

As I said before, the FCC can't be everywhere at once. No one is disputing that you'll probably be able to commit outrageous rule violations and get away with it. But you have to wonder what kind of person enjoys the fact that he can "get away with" breaking rules and federal laws that have been enacted for the good of all. I certainly wouldn't want this kind of person to be a police officer in my town.

Hi Jamey, My name is Woody Parr and I'm up the road in Cornelia. I'm afraid that I'm indirectly responsible for this troll who is badmouthing you at alt.religion.urantiabook. You see he was only there in the first place to attack me.

This idiot is Steven J. Rogovich, 1612 Lake Christopher dr. Virginia Beach, Va. 23464 He followed me to the UB usenet page from alt.radio.pirate He and I (were) both formerly loosely associated with each other in the shortwave pirate radio listening hobby. I USED to be a shortwave pirate but my station has been permanently retired for more than 2 years now. Stevie is still a pirate and is the operator of the station Radio Free Speech. He is also the moderator of a message board at the Free Radio Network < www.frn.net > and goes by the handle of Pat Murphy there. I had a falling out with the people at the FRN a couple of years ago as they became corrupt and were doing so inappropriate things. I dared to open my mouth and openly complain about there stupid activities which since they havn't yet ceased to follow me around the internet anywhere they can and attack me.

Steve is also on the usenet trolling people under the name of Richard Cranium (richardcranus@yahoo.com) He's far too much of a coward to debate anyone using his real name.

You will have a little bit of resistance which will balance the load of the two power supplies and prevent them from trying to regulate each other, and the inductance will help to keep RF out of the house wiring. But I suppose that your vague and unqualified remark of "not much more" might be accurate if you were expecting a marching band and fireworks.

Get your ham license and use the 160 meter band. I listen to people
regularly talking 60 miles and more, and a couple of them are running
only 5 - 10 watts AM (one is a friend at work).

The transformer in the power supply will keep the RF out of the house
wiring. Why add an electromagnet to a power supply? It really is not
required to keep the supplies from trying to regulate each other. All the
regulating is done to the overvoltage supplied by the diode bridge. It does
not work backward into the individual supplies. No marching band or
fireworks are needed.

A pair of high-current rectifiers vs. a few extra feet of wire: Which
is easier? Which is cheaper? Also, diodes won't balance the load,
which means one PS is still going to run hotter and harder than the
other. And diodes will probably have a greater voltage drop than the
resistors (0.7 volts vs. a few extra feet of wire).

Bob,
The 'catch', is asking for 'reasonably reliable'
communications. I think I'd look for something else
besides CB. With reasonably sized antennas at a fairly
reasonable height, you 'might' have halfway reliable
communications at 60 miles, but don't count on it. You
would be much better off with a cell phone, or even by
computer. There's nothing reliable with CB radio.
'Doc

antenna
> built for that band.

Actually, that's the best part. The length of wire doesn't have to be exactly a 40m dipole or 80m dipole. The more wire you put up in the air, the greater the gain. (ARRL Antenna Handbook) The tuner allows you to talk ANYWHERE btween 10m and 80m. The tuner is just allowing the xmitter to deliver ALL its power to said wire. The longer the wire, the greater the gain. (In the form of a greater end-fired lobe with a lower angle of radiation.)

> I know my Interceptor 10K will outperform your wire anyday (and you know
it
> too)...

Let's see, the I-10 is a 5/8 (0.625l) wave omni...based on it's kissing cousin, the End Fed Zepp, (0.64l) old as the hills. A variant is called the Extended Double Zepp, which is essentially a 1.28l dipole fed with ladder-line and a tuner. (Add a matching stub if you have no tuner.) As the length of the wires are increased, so is the gain...though it is no longer omnidirectional. A 40m dipole is approx. 3.64l on 11m...substantially longer than any 5/8 wave omni with much better gain in the dir'n of it's major lobes. The tuner allows me to deliver the full 12 watts and the ladder-line provides a low-loss path to all that airborne copper. :-D The losses in the tuner are relatively negligible. Oh yeah!

> BUT
>
> ...it is not for everyone and I can't use it on 40 (like you).

I understand it's a real piece of quality work.

> Now maybe they could cut the wire for 11 meters, run it with open feeder
line
> direct to the tuner than they won't need a balun.

Yeah, but if you cut each leg at 0.64l rather than 0.5l and use a small (approx. 5 ft.) piece of ladder-line as a matching section to coax, you'll have a Extended Double Zepp...or essentially a dipole made with approx. two 5/8 wave elements horizontally opposed. Better choice, IMHO, and MUCH cheaper. (Can be built for under $20!)

> If they want to feed it with coax, then they will need the 4:1 balun.

1:1.

Another veiled threat coming from the self-proclaimed leader of the
trouble posse.
You pulled the same garbage with Dennis' employer and he's still here.
And you're still whining about being impotent.
-
>Hi Twist. <

Well, since we're dealing with several "aarons", I guess I can reply to
"this" Arron since he doesn't seem as pissed offf or rabid as the
others. Hello and good day.

>Corrections: <

.....opinions.

>1.There's only one Aaaron, and you're talking to him.<<

Then use the voobner@yahoo addy you were using before with the same
path.
Until then, just initate the OE and wordwrap mistakes. Or don't.

>2. The only rabidity and pissed-offedness in this thread is coming from
you. <<

Never has anyone pissed me off in this group.
Perplexed, yes, confused, yes,,,,even fooled and taken advantage of, but
never has anyone, certainly not you, managed to piss me off.

>No threat, veiled or otherwise. But it does seem a tad irresponsible
for a sworn police officer to gleefully (..."YEEE-HAWWW!"...)
announce
that he is operating a prohibited transceiver illegally on the
Citizens
Band..<<

Why the hell would that piss you off to the point you felt to comment on
it? I don't go frothing at the mouth like you're doing now when JerryO
comes in here gloating when a cber gets popped. Hell, if we wanted, us
ignunt and lowly cbahs could glote ever dayz az dem hammyz getz ders on
da regler bassis by da fedz!.

Irresponsibility was never a crime.

>I don't know about you, but I'd want to know the police officers hired in my town were selected on the basis of their ability to act responsibly. <<

Some of us don't judge what they do in their off time short of a "real" crime,,...it is clear the majority do not believe the malarkey you attempt but fail to set forth as being priorities.

>.proclaim that illegal power amplifiers are necessary to communicate...and announce that CB is no longer regulated and is a "free for all".<<

Well, amps do help,,especially during the day when all the skip is running, but I'd rather find a nice quiet off channel on the freeband than run a buncha power. To me, and in my certainly humbled opinion, it is the lesser of the 2 evils.
That's your opinion and you're entitled to it.

>Supporting illegal operation has some built-in disadvantages though.<<<

If I choose to do something it does not mean I encourage another to do so. Learn the difference.

> It labels you as irresponsible and unlawful. <<

Your lables are in the extreme minority and of no real consequence....hence you being underground. Let us imagine only for a moment that not true.....your word among these pages is,,,well,,,,,a bit more than compromised...again...it leads back to your attempts at being underground.

>These are not traits that people in general find trustworthy. <<

I agree. Most people do not agree with you that people that drive 56 in a 55 are criminals or irresponsible, or untrustworthy.
Ditto for freebanding where we do and for DX.

>People who are trying to decide whether or not to operate within the law are likely reading this newsgroup. <<

Then they can see that the feds don't give a rats azz about low power freebanding above the legal 40 but below 10 meter (especially 555) as long as there are no safety, interference, etc., legitimate complaints.

>If they looked closer they'd see that several amateurs have indeed been busted for "freebanding" and running illegal power on the legal 40 in the last year (case files available in the FCC enforcement logs). <<

We're cbers, not amateurs.
Several out of millions of cbers are odds most can live with. More people get struck by lightning each year than cbers get busted. Ditto for hitting the lottery. I think we can all live with those astronomical odds.

>Truck stops are being cited for selling non-type-accepted CB gear. <<

Most of us here don't buy from truckstops.
Even you know this.

>eBay auctions for illegal CB amps continue to be stopped.<<

And sold anyway as the bidders all have the sellers email addy. Old news. You're impotent.....

> Operating in open defiance of FCC rules
whether you're a ham or not doesn't make sense, except perhaps to antisocials and misfits.<<

Maybe not to those who do what they're told and have never learned to think outside the box..
Hell, even running amps (to a point) seems relevantly harmless unless you're in a very populated area, otherwise the feds would make it a priority..

>With cutbacks in funding, it's a given that the FCC can't make enforcement in ANY radio service a "priority". <<

BS! They been busting the worst of the worst of amateurs slowly, but it's getting done ever since 'ol suthin' bo Riley got hisself a cush job.

>They can't be everywhere at once. However that doesn't automatically signal that the entire spectrum is "a free for all". <<

We have went from talking of cb being a free for all until your last sentence where you conveniently attempted to insert your disinformation by substituting "spectrum" for cb. No argument there, never was, except with your self trying to convince your battered ego that others fail to see your BS.

>IMO, Mr. Stover has a responsibility to see that any information he posts here is accurate and reflects actual -not estimated- FCC policy. -Aaron-<<

I can appreciate your position while disagreeing at the same time without prejudice. I believe it was merely an interpretation,,,,one that is somewhat accurate of the current state of cb.

>But his interpretation is not accurate as to the current state of Federal Regulations governing CB.<<

If you work for the FCC, please state your rank and department..I don't need your name. Otherwise, his interpretation is just as valid as yours. Moreso, even.

> It is in fact, harmfully erroneous. For example, there have been no statements issued by the FCC to the effect that the old RF power rules may be ignored due to increasing use of the band. If anything, CB sales have declined since the 1970's boom. <<

Not true and I won't try to argue that with you. There are several dealers that can tell you they have had banner sales since the last 11

meter skip cycle. Maybe not in as short as time, but nonetheless.

>Finally, current Title 47 CFR states that external CB amplifiers are prohibited - and there are no exceptions to this rule, (not even for police, fire, and public service).
<<

Ok. But you are wrong. If there is a true life or death emergency, I can hook up the nearest Davemade, Noname, Skullcracka, Cookie, Texas Star, Palomar, etc.....or whatever the hell I want to make my emergency known.

Many of us know from
experience what to expect from the FCC, IE: which behavior causes problems and what type action the feds will take. Most cbers know that the heavy hand of enforcement by the FCC is not what certain types on this board would like it to be, despite the false and oft reiterated claims to the contrary.

>As I said before, the FCC can't be everywhere at once. No one is disputing that you'll probably be able to commit outrageous rule violations and get away with it.<<

The majority present, as demonstrated, do not agree with your assessment of what constitutes "outrageous rule violations" and luckily that term is to be found nowhere among your dead sacred cb scrolls,,er,,rules.

> But you have to wonder what kind of person enjoys the fact that he can "get away with" breaking rules and federal laws that have been enacted for the good of all.<<<

Actually, this is the first time I have entertained the thought of experiencing an emotion due to the breaking of any rules since what I do is such a mundane and trivial thing I. I have better things to do than dwellon my psyche.
I would question the morality of someone who has named a troubled posse of nocodes, one who has spammed the group, and ones who are interested in personal lives of cbers who happen to be complete strangers on the internet.

> I certainly wouldn't want this kind of person to be a police officer in my town.
-Aaron- <<

Which town is that? Ah, never mind.

Maybe you missed the part about the resistance of the wire...

> All the
>regulating is done to the overvoltage supplied by the diode bridge.

huh?

> It does
>not work backward into the individual supplies. No marching band or
>fireworks are needed.

The method current equalization I described is done all the time, and if you have a stereo in your trailer then you are renting-to-own a working example of this common practice.

A voltage regulator works by sampling the output voltage and adjusting the current accordingly. If the voltage is too high then the current is squeezed off; if the voltage is too low the valves are opened up. Now when you parallel two regulators you are never going to get the voltages to match exactly. The result is that the regulator on one supply is going to try to pull the voltage up while the other one is trying to pull it down. Unless you have enough resistance between the two regulators to limit the current flow between the two supplies, all you are going to do (under a small or no-load) is pump a whole lot of current from one regulator into the other. And as the load increases, the regulator with the lower voltage is going to run a lot hotter.

The commonly used solution to this problem is the use of resistors to equalize the current. The only thing I added was the idea of using a choke for the resistance.

I have never claimed to be a nocode licensee, I took my General and Advanced class test in front of an FCC examiner, long before VECs and nocode were ever thought of.<<

Your *behavior* dictates it. You reiterate this hammie stuff of yours overand over so it must mean the world to you that you are indeed recognized as not just a no-code. To us, you are a nocode unless you put forward somethng you asked of us....your call. Now, b4 you come on half cocked, I'm not the least concerned who or what you are, but since it is so imperative for you to distinguish yourself from the nocodeds, I merely thought you would like to provide the opportunity to share and spread your good will.

I tend to give folks the benefit of the doubt,,,,,,,,,thinking most people can actually tell the difference between doing something to an unparticipating or unwilling other vs. doing something to yourself. Let us set aside for the moment these socialist protests coming from the trouble posse named by "Aaron" (Frank Gilliland, Lelnad KC8LDO, Dave Hall, George Busch). Dave Hall has set forth many times the view that "we are part of society , therefore we must conform to that society". If he was honest with those posts, this proves him a socialist beyond a SHADOW of doubt. The scary part is he thinks this socialism approach correct without realizing the philosophy he is espousing.
Our great country is not, was not, and never will be an experiment toward socialism.

  We are free to be INDEPENDENT...to experiment with our independence. I use the term "experiment" because compared to the rest of the world, we are a baby country, the new kid on the block. It is a tragedy that some of our government officials have decided to end
  the liberties of our country and slide backwards and downwards toward totalitarianism.

Their propaganda has succeeded to the point
of brainwashing folks like Dave Hall and his socialist/commie heathen friends to where they spread this poisonous and venemous philosophy. "Aaron" in his current carnation is highly efficient here. If he wasn;t such a...a....you know what I mean.....he would make a great ad or PR man.....I probably could even help him find employment.

This Orwellian society Dave Hall aspires for has no more right to pick a citizen's intoxicant than they do to pick your religion or you do to tell us how to act on cb.

To Dave Hall and the others who have mentioned that we need heed all societal acceptances....
until you in the minority can understand that to actually be free requires that we be unfettered by each other concerning our self-directed activities, whatever you profess concerning "conforming to society" is reprehensible and not at all realistic. You don't own me, my body or my mind. I never allowed another to supercede my own will and never shall, but you are welcome to foolishly spend your life wailing about my kind of freedom loving individuals who think for ourselves and do not need told or directed what to do or how to do it.

We have been down this road before and you still are having problems comprehending this aspect. I don't believe you understand what freedom really entails.

It's quite simplistic, really. I just laugh every time some anti-idiot tries to void my views and my actions.

I was going to ask Dave Hall why I should subjugate my views over what I choose
in favor of his,,,,why should he get to tell others how to live, but dealing with brainwashed, unscrubbed socialists is pointless. This is America and his kind can be found under many rocks, should one turn enough of them over.

  Can this uniformity that Dave Hall aspires for actually work?
Let's see,,,millions have been imprisoned, died, etc., over the drug war, even innocents. Have we slowed narcotic trafficking? No, not at all. Are the streets safer? No, they're worse. Are drugs harder to get? No, they're easier.

(Illicit) Drugs are an intentional revenue generating scourge perpetuated by the government.
Another analogy that can be drawn was the introduction of Christianity. Way back when, people were burnt at the stake, threatened, blackballed, imprisoned, family members tortured, etc. Let us see how far our civilization has moved toward what "society" says was correct. What was the fallout of that coercion?
Did they eliminate other religions? No, other religions prospered and proliferated, by not conforming to "society". Salem alleged witchcraft was their bane, not unlike how Dave Hall claims those who do not conform to all of societies rules and laws are criminals.

If "aaron's" named trouble posse takes issue with the above, it's no surprise. The GIST of the message was written by none other than Thomas Jefferson. I'm done with my rant and homage to Jefferson. Ya'll have a super weekend. I need to get some baitfish, *IF*
the wake of the storm will allow it.

Plans on how to make your own base and mobile antennas, from quarter waves
to beams, quads, and MORE. (These files alone will pay for itself)

UNDERSTANDING coax, swr's, line loss, co-phasing, grounding and MORE. (you
could go to library, copy and forget where you put it..)

CD also includes tuning AND modifications on just about every cb as well as
most 10 meter radios. (for educational purposes) golderscrewdriver is what
$39.95?

Mic wiring to all popular cbs, D104, Sedelata, Turner, standard and of
course MORE. (heck, wanna know whats IN a D-104?)

PLL convertions, adding talk-back, swing kits, roger beeps and MORE
(go to your local shop and ask them to do it, what? more money?)

Packed with pictures, how toos, parts and MORE.

How bout takin a radio and electronics course? FREE
Now includes NTE's cross reference 10.0 program to find over 14,000 parts
!!!! FREE
Schematics, figs, how too's, plus a lot of Amplifier stuff, programs that'll
help you BUILD your own stuff..
need I say MORE?

email for more info, over 130 megs of info in easy to understand format.

Organized for EASY reference.
$20.00

The next time you have a bad day at work...think of this guy.

Rob is a commercial saturation diver for Global Divers in Louisiana.
He performs underwater repairs on offshore drilling rigs.

Below is an e-mail he sent to his sister. She then sent it to
Laughline, who was sponsoring a "worst job experience" contest.
Needless to say, she won.

_____

Just another note from your bottom-dwelling brother.

Last week I had bad day at the office. I know you've been feeling down
lately at work, so I thought I would share my dilemma with you to make
you realize it's not so bad after all.

Before I can tell you what happened to me, I first must bore you with
a few technicalities of my job. As you know, my office lies at the
bottom of the sea. I wear a suit to the office.

It's a wetsuit.

This time of year, the water is quite cool.

So what we do to keep warm is this: We have a diesel powered
industrial water heater. This $20,000 piece of s#!*! sucks the water
out of the sea. It heats it to a delightful temperature. It then
pumps it down to the diver through a garden hose, which is taped to
the air hose.

Now this sounds like a damn good plan, and I've used it several times
with no complaints. What I do, when I get to the bottom and start
working, is I take the hose and stuff it down the back of my wetsuit.
This floods my whole suit with warm water. It's like working in a
Jacuzzi.

Everything was going well until all of a sudden, my ass started to
itch.

So, of course, I scratched it.

This only made things worse.

Within a few seconds my ass started to burn. I pulled the hose out
from my back, but the damage was done.

In agony, I realized what had happened.

The hot water machine had sucked up a jellyfish and pumped it into my suit.

Now since I don't have any hair on my back, the jellyfish couldn't stick to it.

However, the crack of my ass was not as fortunate.

When I scratched what I thought was an itch, I was actually grinding the jellyfish into my ass.

I informed the dive supervisor of my dilemma over the communicator.

His instructions were unclear due to the fact that he, along with 5 other divers, were all laughing hysterically.

Needless to say I aborted the dive.

I was instructed to make 3 agonizing in-water decompression stops totaling 35 minutes before I could reach the surface to begin my chamber dry decompression.

When I arrived at the surface, I was wearing nothing but my brass helmet. As I climbed out of the water, the medic, with tears of laughter running down his face, handed me a tube of cream and told me to rub it on my ass as soon as I got in the chamber.

The cream put the fire out, but I couldn't shit for 2 days because my asshole was swollen shut.

So, next time you're having a bad day at work, think about how much worse it would be if you had a jellyfish shoved up your ass.

....

I NEVER post to sex groups, yet my mailbox started filling with Spam. It started when my old ISP (Supanet) started automatically putting the senders full e-mail address in the headers... whether you wanted it there or not. Some Spamming organisations work on the assumption that, if you leave this info in your header, you actually want spam.
After I complained, Supanet removed the additional header... but the damage was done.

Yes, certain types of business do send more Spam than most... Loans, Sex, something called "HGH". But, you do not need to use that type of site to get their attention.

Addresses are harvested from several sources:
Newsgroup messages.
Web pages.
Sign-ups.
Other on-line forms.

There are "Spiders" crawling the Net, looking for e-mail addresses in web documents. If you have a web site, never put your e-mail address on it in a way that can be read by Spiders.
Some of the "free" services on the Net are funded by selling e-mail lists, just like many companies do with "snail mail". When you give your e-mail address to a website, they may put it in a list and pass it on. They may even pass on any personal details you give them. Some ISPs may even do this to boost their income.

To tackle this problem, I use "SMB"... a FREE program that filters mail on the server.

It can filter by sender, subject or addressee.
I have it set to delete ALL mail that does not match my "accept"
criterior... absolutely NO Spam gets through.

Everyone knows amps on 11 meters are illegal. So what? So we have the holier-than-thou schmoes out there trying to convince us that we ought to change our ways. Look, I,ll make it real simple 4 u self appointed cops and monitors or whatever the hell u refer to yourselves as. We know
the risks, if we take the chance, most of us are ready to deal with the
consequences should the heat come down. I have respect for MOST hams,but I achieve the same results at a fraction of the cost. If I bleed a
neighbor, all they have to do is knock on my door. We will work it out.
I have been in the same area for quite some years and have no problems.
If I am not hurting anyone, why the hell should you care WHAT I do? The
bottom line is you shouldn't. Get a life. You guys that bitch about us freebanders and "peaked" radios have way too much time on your hands.
I don't need to run anymore than 30 watts where I am located and I talk
all over the world......yes.. on the freeband. Nothng pleases me more than one of you cb rambos to come in to my conversation and start preaching about rules. God, I love to squash you suckers.

Gettin' WAY-UP from the sandpile

> Until then, just initate the OE and wordwrap mistakes. Or don't.

If hams are getting popped for tainting 11 meters, then CB'ers should
get popped for trespassing on 10. One good turn deserves another.
Turnabout is fair play. What's good for the goose....well, you get it,
right?

I am not judging. I am quoting Title 47 US Code Of Federal
Regulations. It's not marlarkey, Twist. It's the law.

When you willfully and repeatedly disobey US Code Of Federal
Regulations Title 47 you do commit a crime and you are a criminal.
That ain't my "lable", it's the government's. Take it up with them.

Tut tut, now, I have never said that people driving 56 in a 55 are
criminals. Neither have I ever said that if you disobey one law you
disobey them all. However any fool can see the difference between a
$10,000 fine (FCC NAL) and a $100 fine (speeding ticket). Well, maybe
not ANY fool. There is one I know who can't...

Let me get this right: "doing what your told" (i.e. being a good
citizen) is a bad thing and disobeying the law is merely "thinking
outside the box". Are you so out of touch with reality that you
actually believe this dopeyness?

> Hell, even running amps (to a point) seems relevantly harmless unless

One man in the entire FCC organization has been assigned to amateur
enforcement. Doesn't sound like a "priority" to me. But if you say
so....

>

> see your BS.

Wrong, I was making a comparative assumption. Read carefully:

IF

CB + no enforcement = free for all.

THEN

Other Parts Of Spectrum + no enforcement = free for all.

Of course my comparitive assumption merely serves to illustrate the
ludicrousness of the initial assumption. Lack of FCC enforcement in
ANY portion of the spectrum does NOT signal that portion of the
spectrum is a "free for all".

> Moreso, even.

There's no interpretation on my part. I don't need to interpret. I can
quote the actual law. And the actual law contradicts what Mr. Stover
says. External amplifiers ARE illegal on CB. FCC rules ARE still
enforced. Don't take my word for it. Read US CFR Title 47.

>
>

I don't have the annual sales figures of CB equipment handy. Neither
do you. But I'm willing to bet there is quite a difference in CB sales
between 1976 (the year "Convoy" came out) and this year. Which means
there are less CB'ers on the air now that there were then.

>
>

Twist, we are not talking about "true life and death emergency". We
are talking about Lennie Stover telling a motorist which exit to take
to find the gas station. And he doesn't require a Skullcracka or an
illegal Galaxy DX99V to do it with.

Yeah, I goofed again. So I'll just elaborate on the theory and quit making a mockery of mathematics:

Just for the hell of it, let's forget about the load for a minute and think about the power dissipated by the active device. At rail-to-rail output, the AC voltage is the same across both the load and the active device, or Vcc. Also, the current is constant at Icq through both the load and the active device. Therefore there should be an equal power across the active device as the load. But you have a problem there, because if the power across the load is only 25% of the input power and the power dissipated by the active device is equal to that of the load, then the active device must also dissipate 25% of the power. That's only 50% of the input power -- where did the other 50% go?

This is a major cause of confusion. There are two different kinds of power here: AC power and DC power. With no signal there is only DC power, and if the load is purely resistive the power will be dissipated equally by the load and the active device. When an AC signal is being amplified, the power supply current does not change, the average voltage and current do not change across either device, and therefore the power dissipated does not increase. What happens is that DC power is converted to AC power by the amplifier, yet the two components are still dissipating equal amounts of power.

So the real issue is how much DC power can be converted to AC power. With a Class A amplifier, no more than one-half of the DC can be converted to AC (50% efficiency), and this occurs when the output is a square wave.

NOW is the time for a little math. Given: Vcc = 180 volts and RL = 100 ohms. For a square wave:

Vrms = Vpeak = 90 volts
Ipeak = 180 / 100 = 1.8 amps
Icq = Ipeak / 2 = 0.9 amps
Irms = Ipeak - Icq = 1.8 - 0.9 = 0.9 amps
Pin = Vcc * Icq = 180 * 0.9 = 162 watts
Pout = Vrms * Irms = 90 * 0.9 = 81 watts

For a sine wave:

Vrms = 0.707(Vpeak) = 63.63 volts
Ipeak = 180 / 100 = 1.8 amps
Icq = Ipeak / 2 = 0.9 amps
Irms = 0.707(Ipeak - Icq) = 0.6363 amps
Pin = Vcc * Icq = 180 * 0.9 = 162 watts

Pout = Vrms * Irms = 40.5 watts

So a Class A amp can convert no more than 50% of it's input power into a square wave (maximum theoretical efficiency), but no more than 25% into a sine.

Now THAT should clear up this whole discussion!

381. Re: Update on Yeti's amp

Newsgroup: rec.radio.cb

From: yeti@REMOVEcet.com
Message-ID: <3d9ec686.45733630@news.cet.com>
Source record: 139161

One additional note: Maximum sine-wave efficiency can be increased to above 25% by the use of an inductive load (or tank) with low or negligible DC resistance. Max is still limited to 50%.

First of all you don't want a High-pass filter. You need a low-pass with a cutoff at about 32MHz. I use to have one made by Radio Shack in the late 70's and it worked great. It most likely won't keep you out of telephones or stereos.The reason with phones is that the copper wire that is used makes a great antenna and the phones are so badly built that they will pick up all most anything. With stereos it is all the junk that is hooked up before the amp and all the exposed wires. The best for both is Ferrite chokes on the cables. The trouble is that you have to go into the neighbors house and put them in. R/S does make a phone filter that plugs into the wall jack and the phone cord plugs into it. I use one to keep the RF out of my modem. Without it the CB and other things get into the computer but with it no trouble. Give it a try.

I know I am not a nocode licensee (and I do not think less of anyone who holds a nocode license than any other licensee, it is great entry class license into ham radio), and it is of the smallest concern to me whether you or others believe it or not. Your have a call twistie? Care to post it? Maybe you can't even pass the test for a nocode license.

Everyone knows amps on 11 meters are illegal. So what? So we have the holier-than-thou schmoes out there trying to convince us that we ought to change our ways. Look, I,ll make it real simple 4 u self appointed cops and monitors or whatever the hell u refer to yourselves as. We know the risks, if we take the chance, most of us are ready to deal with the consequences should the heat come down. I have respect for MOST hams,but I achieve the same results at a fraction of the cost. If I bleed a neighbor, all they have to do is knock on my door. We will work it out. I have been in the same area for quite some years and have no problems. If I am not hurting anyone, why the hell should you care WHAT I do? The bottom line is you shouldn't. Get a life. You guys that bitch about us freebanders and "peaked" radios have way too much time on your hands. I don't need to run anymore than 30 watts where I am located and I talk all over the world......yes.. on the freeband. Nothng pleases me more than one of you cb rambos to come in to my conversation and start preaching about rules. God, I love to squash you suckers.
Gettin'
WAY-UP from the sandpile
<<

You lost me on that one. Besides, I still like to squash hammies that come causing trouble on the freeband. I put Lelnad KC8LDO so far back out with his little amp that had no azz on 555 a few months ago when he tried to jam me. He was PISSED!

Until then, just initate the OE and wordwrap mistakes. Or don't.

>You lost me on that one. <<

Then toss it out your Windows.

>2. The only rabidity and pissed-offedness in this thread is coming from you. <<

Never has anyone pissed me off in this group. Perplexed, yes, confused, yes,,,,even fooled and taken advantage of, but never has anyone, certainly not you, managed to piss me off.

>No threat, veiled or otherwise. But it does seem a tad irresponsible<<

Irresponsibility isn't a crime and it is merely you humble opinion anyway.

>for a sworn police officer to gleefully (..."YEEE-HAWWW!"...) announce
that he is operating a prohibited transceiver illegally on the Citizens Band..<<

Why the hell would that piss you off to the point you felt to comment on it? I don't go frothing at the mouth like you're doing now when JerryO comes in here gloating when a cber gets popped. Hell, if we wanted, us ignunt and lowly cbahs could glote ever dayz az dem hammyz getz ders on da regler bassis by da fedz!.

>If hams are getting popped for tainting 11 meters, then CB'ers should get popped for trespassing on 10. One good turn deserves another. Turnabout is fair play. What's good for the goose....well, you get it, right?<<

Not only do I get it, I wholeheartedly agree.

>I don't know about you, but I'd want to know the police officers hired in my town were selected on the basis of their ability to act responsibly. <<

Some of us don't judge what they do in their off time short of a "real" crime,,...it is clear the majority do not believe the malarkey you attempt but fail to set forth as being priorities.

>I am not judging. I am quoting Title 47 US Code Of Federal Regulations. It's not marlarkey, Twist. It's the law. <<

Some laws are outdated and obsolete, such as the one on the books that says you can't hang laundry on a Sunday within 250 feet of a church in certain parts of Kansas. There exist a ton of such laws still on the books.

>.proclaim that illegal power amplifiers are necessary to communicate...and announce that CB is no longer regulated and is a "free for all".<<

Well, amps do help,,especially during the day when all the skip is running, but I'd rather find a nice quiet off channel on the freeband than run a buncha power. To me, and in my certainly humbled opinion, it is the lesser of the 2 evils.

>That's your opinion and you're entitled to it.
Supporting illegal operation has some built-in disadvantages though.<<<

If I choose to do something it does not mean I encourage another to do so. Learn the difference.

>So you're NOT encouraging people to freeband? Or run amps? Wow. Cool! Let's hear about it.<<

Whats to hear? I'm nobody's mother and tell no one what they should or shoudn't do unless their question dictates it..

>It labels you as irresponsible and unlawful. <<

Your lables are in the extreme minority and of no real consequence....hence you being underground. Let us imagine only for a moment that not true.....your word among these pages is,,,well,,,,,a bit more than compromised...again...it leads back to your attempts at being underground.

>When you willfully and repeatedly disobey US Code Of Federal Regulations Title 47 you do commit a crime and you are a criminal. That ain't my "lable", it's the government's. Take it up with them.<<

I have never sen the governement use the term "criminal" concerning freebanders or folks that run a hundred watts or so.
Even if they did, the government is usually wrong.

>These are not traits that people in general find trustworthy. <<

I agree. Most people do not agree with you that people that drive 56 in a 55 are criminals or irresponsible, or untrustworthy. Ditto for freebanding where we do and for DX.

>Tut tut, now, I have never said that people driving 56 in a 55 are criminals.<<

But you did. Driving 56 in a 55 is technically breaking the law, and you just claimed that makes one a criminal.

> Neither have I ever said that if you disobey one law you disobey them all. However any fool can see the difference between a $10,000 fine (FCC NAL) and a $100 fine (speeding ticket). Well, maybe not ANY fool. There is one I know who can't...<<

Maybe to that one person, 100 dollar fine is no different to his pocketbook than a 10,000 dollar fine. I have a wealthy friend who routinely speeds even when he sees the signs in some states that announce the HIGH fines for each mile over the posted limit...he says, "I can afford it" and hammers down. You think there are no wealthy cbers? A few come to mind right off the bat. Matter of fact, there are several well to do cbers here. Big businesses routinely pay fines as a part of doing business, a wealthy cber may have no problem paying to play...BUT, as I taught Dave Hall, more folks get hit by lightning and win the lottery thancbers receiving NALS. The odds you and your party

set forth concerning cbers getting into hot water are bogus.

>People who are trying to decide whether or not to operate within the law are likely reading this newsgroup. <<

Then they can see that the feds don't give a rats azz about low power freebanding above the legal 40 but below 10 meter (especially 555) as long as there are no safety, interference, etc., legitimate complaints.

>If they looked closer they'd see that several amateurs have indeed been busted for "freebanding" and running illegal power on the legal 40 in the last year (case files available in the FCC enforcement logs). <<

We're cbers, not amateurs.
Several out of millions of cbers are odds most can live with. More people get struck by lightning each year than cbers get busted. Ditto for hitting the lottery. I think we can all live with those astronomical odds.

>Making a habit of "getting away with" breaking rules is antisocial.<<

See the education I gave Dave Hall concerning his socialism he attempts to breed and spread among us. Besides, being antisocial is not a negative thing like you are trying to stereotype it into being. There is nothing wrong with a loner who wishes to live alone on a mountaintop or farm or what have you....only your opinion.

> And it's a crappy thing to build a hobby around, too. Truck stops are being cited for selling non-type-accepted CB gear. <<

Most of us here don't buy from truckstops. Even you know this.

>No I didn't. <<<

Then you're missing posts again.

>But FYI, Internet CB stores have
been busted too.
eBay auctions for illegal CB amps continue to be stopped.<<

And sold anyway as the bidders all have the sellers email addy. Old news. You're impotent.....

>I don't understand why you'd be so proud of "getting around the law". Unless you're a criminal.<<

Again, your failure at putting words in anothers mouth illustrates your motives.
What most are proud of, is getting around you attempting to stop a seller, you're not the law.

>Operating in open defiance of FCC rules
whether you're a ham or not doesn't make sense, except perhaps to antisocials and misfits.<<

Maybe not to those who do what they're told and have never learned to think outside the box..

>Let me get this right: "doing what your told" (i.e. being a good citizen) <<

Another error of yours. Equating blindly doing what you're told with making a good citizen is so far removed from reality that..well.it's not unexpected coming from you.

>is a bad thing and disobeying the law is merely "thinking outside the box". <<

You made the link between thinking out of the box and an illegal act...not I.

>Are you so out of touch with reality that you actually believe this dopeyness? <<

Along with the majority of freedom loving socialist-haters in America, a resounding yes.

Hell, even running amps (to a point) seems relevantly harmless unless you're in a very populated area, otherwise the feds would make it a priority..

>With cutbacks in funding, it's a given that the FCC can't make enforcement in ANY radio service a "priority". <<

BS! They been busting the worst of the worst of amateurs slowly, but it's getting done ever since 'ol suthin' bo Riley got hisself a cush job.

>One man in the entire FCC organization has been assigned to amateur enforcement. <<

Yea, and he been bustin' the hell out of 'em, huh?

>Doesn't sound like a "priority" to me. But if you say so.... <<

Not me. The FCC reports say so. Take it up with them.

>They can't be everywhere at once. However that doesn't automatically signal that the entire spectrum is "a free for all". <<

We have went from talking of cb being a free for all until your last sentence where you conveniently attempted to insert your disinformation by substituting "spectrum" for cb. No argument there, never was, except with your self trying to convince your battered ego that others fail to see your BS.

>Wrong, I was making a comparative assumption. Read carefully:
IF
CB + no enforcement = free for all.
<<

Proven. The "IF" word means nothing.

>THEN
Other Parts Of Spectrum + no enforcement = free for all. <<

Clearly a subjective opinion on your behalf,,,,,,an opinion can be
neither right oe wrong.

>Of course my comparitive assumption merely serves to illustrate the
ludicrousness of the initial assumption. <<

I agree. YOUR initial assumption that cbers are in danger of the FCC for
simple freebanding and running a bit of power is bunk, with very few
exceptions..

>Lack of FCC enforcement in ANY portion of the spectrum does NOT signal
that portion of the spectrum is a "free for all".
IMO, Mr. Stover has a responsibility to see that any information he
posts here is accurate and reflects actual -not estimated- FCC policy.
-Aaron-<<

I can appreciate your position while disagreeing at the same time
without prejudice. I believe it was merely an interpretation,,,,one that
is somewhat accurate of the current state of cb.

>But his interpretation is not accurate as to the current state of
Federal Regulations governing CB.<<

If you work for the FCC, please state your rank and department..I don't
need your name. Otherwise, his interpretation is just as valid as yours.
Moreso, even.

>There's no interpretation on my part. I don't need to interpret. I can
quote the actual law.<<

I can quote several obscure laws that are no longer or only selectively
enforced. There is no point to you doing so redundantly.

> And the actual law contradicts what Mr. Stover says.<<

And actual enforcement against cbers
contradicts what you say.

> External amplifiers ARE illegal on CB. FCC rules ARE still enforced.<<

What, by that one man you mentioned? Make up your mind.
And they are NOT enforced for the majority of simple freebanders and
cbers
causing no problems. I know this upsets you greatly, but those are the
cold facts.

> Don't take my word for it. Read US CFR Title 47.<<

Don't take my word for it, listen in on 555 and send ol' Riley all the
tapes want. The proof is in the pudding.

>It is in fact, harmfully erroneous. For example, there have been no
statements issued by the FCC to the effect that the old RF power rules

may be ignored due to increasing use of the band. If anything, CB sales have declined since the 1970's boom. <<

Not true and I won't try to argue that with you. There are several dealers that can tell you they have had banner sales since the last 11 meter skip cycle. Maybe not in as short as time, but nonetheless.

>I don't have the annual sales figures of CB equipment handy. Neither do you. But I'm willing to bet there is quite a difference in CB sales between 1976 (the year "Convoy" came out) and this year.<<

Maybe. Now if you would have said a year or two ago, I may be willing to take that bet. The skip cycle and the 70s nostalgia kick and the swell of population since 76 may have made the difference. In any event, it's speculative on both parts.

> Which means there are less CB'ers on the air now that there were then.<<

Nah, there are more. There are way more truckers and they all have cbs.

>Finally, current Title 47 CFR states that external CB amplifiers are prohibited - and there are no exceptions to this rule, (not even for police, fire, and public service).
<<

Ok. But you are wrong. If there is a true life or death emergency, I can hook up the nearest Davemade, Noname, Skullcracka, Cookie, Texas Star, Palomar, etc.....or whatever the hell I want to make my emergency known.

>Twist, we are not talking about "true life and death emergency". We are talking about Lennie Stover telling a motorist which exit to take to find the gas station. <<

Nowhere did you mention that in your reply to me until now. As a matter of fact, you said there were NO exceptions, when in fact I just gave you the most obvious.

>And he doesn't require a Skullcracka or an illegal Galaxy DX99V to do it with. <<

During the day, depending on how far away he is, he may.

Many of us know from
experience what to expect from the FCC, IE: which behavior causes problems and what type action the feds will take. Most cbers know that the heavy hand of enforcement by the FCC is not what certain types on this board would like it to be, despite the false and oft reiterated claims to the contrary.

>As I said before, the FCC can't be everywhere at once. No one is disputing that you'll probably be able to commit outrageous rule violations and get away with it.<<

The majority present, as demonstrated, do not agree with your assessment of what constitutes "outrageous rule violations" and luckily that term is to be found nowhere among your dead sacred cb scrolls,,er,,rules.

>Complain, cry, bitch and moan all you want, it's your right.<<

No one here cries, bitches or moans except (of course) you and your named trouble posse. Everyone knows that.

> But the US Government does not share your opinion that the Code Of Federal Regulations are "dead sacred scrolls". <<

Nor do they share your skewered view that freebanding lowpower DXing cbers are criminals. If they did, you just made the case that the guv-mint is derelict in enforcement, which you clearly try to set forth the opposite.

>But you have to wonder what kind of person enjoys the fact that he can "get away with" breaking rules and federal laws that have been enacted for the good of all.<<<

Actually, this is the first time I have entertained the thought of experiencing an emotion due to the breaking of any rules since what I do is such a mundane and trivial thing I. I have better things to do than dwellon my psyche.
I would question the morality of someone who has named a troubled posse of nocodes, one who has spammed the group, and ones who are interested in personal lives of cbers who happen to be complete strangers on the internet.

>We're talking about illegal amplifier use on CB. Want to shift the subject to newsgroup behavior and etiquette? <<

You already did at the beginning of this post.
Your ego was once again bruised and damaged enough to cause you to go frantically running to the archives and attempt a change of discussion as soon as you realized you were again in over your head..

>We can go there.<<

Not "WE"....YOU. You already did. See aboe.

> I still have copies of your old "1mangang" posts. We can discuss those. Let me know. <<

I can discuss anything. You, on the other hand, have a malady that affects you holding a topic and refraining from insult, lies, deliberate misinformation and obsessions for personal information on cbers and usenet strangers.

>I certainly wouldn't want this kind of person to be a police officer in my town.
-Aaron- <<

Which town is that? Ah, never mind.

>Why? Coming over to watch The Sopranos with me? Ahh, forgedaboudit.
-Aaron- <<

Nah. So far it sucks. Besides, I'm doing single late night trips this weekend...the days are still screwed up from that damn storm.

I gotta tell you, there's a definite sense of satisfaction that comes from building a good wire antenna and having it work really well. There are purist who insist on actually building the baluns themselves, which is cool for them. (...and actually pretty easy.) I prefer the commercial stuff though. But if you really wanted to, you could put up a wire that'd come close to a two element yagi for practically pennies. I might do this for my brother-in-law w an Extended Double Zepp for his CB station. Since we only use channels 36 through 40, I'll trim it for channel 38 and hoist it high. (His trees are about 100 ft. tall with good supporting limbs, free and clear, at approx. 70 ft., not bad.) Take it easy. :-)

"Instructions?" YOU said you would "Gladly" post the proof, Aanal Aaron. Who's giving "instructions"? And YOU are the one doing the TROLLing and SPAMming of the newsgroup with lame repetitions of the same arroneous personal information.

I never "threatened" Frank, as you full well know since YOU posted the message with all the DNSs and related ISPs. What a true maroon you have proven yourself to be. You're nothing but an annonymous coward and TROLL.

So, when do you post the PROOF you offered to "Gladly" post? You haven't done it yet and you cannot, can you?

From: JasonG <jgoldring@99istop.com>
Message-ID: <3d9f2985$1@news.eol.ca>
Source record: 139182

I have a Larsen NMO27 antenna on a TMB mount (L-Bracket screwed to
the trunk gutter). I cut the whip according to the tuning sheet and I can't
seem to get the darn thing below 2.5:1 SWR. It also seems to be really
narrow-banded. From 1 to 40 I go from 2.5 to 3.5

Anyone else have similar problems?
Is their an easy fix or am I missing something here?

(SWR measurements done with a Daiwa CN801 meter & a stock Prostar 400 radio
with a brand new Larsen Coil, Mount & NMO cable assembly)

Thanks,
Jay.

Hate to keep bothering yall, but i went out and got a mic that is supposed to fit most midland cbs and im still having about the same problem with my Midland Model 13-898B. It seems to be backwards, when i key the mic, the standing wave meter goes dead and i can hear static and transmissions, when i let it go, it seems to be transmitting. I took the cover off and just looked, there is one pin that is not even used one wire goes to others and 2 wires go to one pin, the connections seem to be sound. Maybe does this thing require a special base station mic? Like i say, i hate to keep bothering you folks with questions but im trying to get this thing up and running.

Thanks For Any Info,

Jason

We've now added all our crystal charts for free download/printing (PDF) on our site. These 32 charts cover about 95% of all American mobile & base CB models, and show exactly which crystal(s) affects which mode or channel. Very useful for troubleshooting "dead channels" symptom, or for modification to 10M or other freqs.

Check 'em out at: www.cbcintl.com/xtals/xtals.htm

We specialize in CB books, plans, kits, and high-performance CB accessories. Please visit our Web site to see all those "goodies" you just can't find anywhere else!

www.cbcintl.com

You can also download our complete CB catalog, or just the Order Form from the home page. We've also got a new Email Order Form (for VISA/MC) if you're in a hurry.

* *
In case you didn't already know...

Who are we? Since 1976 we've been the leading supplier of books, plans, and kits just for CB radio. Do-it-yourself repairs and modifications, 10-Meter Ham conversions, amplifiers, FM converters, bleedover filters, adding new frequencies, etc. Secrets of how to increase your power, range, and privacy.

For product questions or additional details

Radio Shack used to have a very easy-to-read primer called "Realistic
Guide to Oscilloscopes" by Middleton. If they don't have it any more I
would suggest going to your local public library and finding something
similar.

Field strength, for the simple reason that it's a direct measurement of how much RF you are putting out. A tuned FSM is even better because it measures signal strength only on the desired frequency.

Excuse me, "Bobbie-girl", but if the claim against you was false, why
was your account cancelled? And what makes you think I send it?

You've been on the usenet for years, bobbie-girl, and anybody can do a
search to prove that. Just search for Radio Bob and/or rbcn1.

Still jamming the ham repeaters in Cornelia, GA?

TROLL!!

Hi Jamey, My name is Woody Parr and I'm up the road in Cornelia. I'm
afraid that I'm indirectly responsible for this troll who is
badmouthing you at alt.religion.urantiabook. You see he was only there
in the first place to attack me.

This idiot is Steven J. Rogovich, 1612 Lake Christopher dr. Virginia
Beach, Va. 23464 He followed me to the UB usenet page from
alt.radio.pirate He and I (were) both formerly loosely associated
with each other in the shortwave pirate radio listening hobby. I USED
to be a shortwave pirate but my station has been permanently retired
for more than 2 years now. Stevie is still a pirate and is the
operator of the station Radio Free Speech. He is also the moderator of
a message board at the Free Radio Network < www.frn.net > and goes by
the handle of Pat Murphy there. I had a falling out with the people at
the FRN a couple of years ago as they became corrupt and were doing so
inappropriate things. I dared to open my mouth and openly complain
about there stupid activities which since they havn't yet ceased to
follow me around the internet anywhere they can and attack me.

Steve is also on the usenet trolling people under the name of Richard
Cranium (richardcranus@yahoo.com) He's far too much of a coward to
debate anyone using his real name.

Do they have restrictions on flagpoles? And who said anything about
"large loops out in the open"? Are you planning on DXing submarines?
You can wind a very effective AM BC loop around a picture or window
frame. I have a neighbor that makes things called "dream-catchers"
that would be ideal for an inside loop. And you can't beat the
one-knob tuning.

>When I first started this antenna project, I considered winding a loop

Try the loop.

I don't care about chasing DX on HF, unlike the gentlemen I was
responding too, so I don't need the additional operational privileges
right now. Even the late Richard finally gave up needling me about it
when he realized I'm not kidding. Some day maybe you'll wise up too.

Since when are CB walkie-talkies reliable for 50 miles? Didn't you
even read the article? And aren't you the one that keeps complaining
about how the CB is so noisy? How is that any different than the noise
on 160 meters, except for the excellent ground-wave propogation?

Outdated? Drop "Rabbit Ears" a postcard and ask him which outdated laws are responsible for his current problems. Or ask Frank Kluz, of Lancaster, OH who got a $5,000 NAL in August from the Detroit, MI District Office for using a CB linear which outdated laws took a bite out of his bank account. Or cruise thru a list of folks whose wallets are lighter thanks to these "outdated laws":

http://www.fcc.gov/eb/Public_Notices/Welcome.html

No, there are not FCC agents on every street corner. Yes, in many cases you'll be able to "get away" with violating CB rules and not get caught. But when you foster the idea that people should not obey federal regulations concerning CB because they are obsolete and outdated -- that's misinformation, plain and simple.

This thread started with my response to Lennie' Stover's post . I challenged his excuse that "we need linears to walk on people using linears". You stepped in, and within a few exchanges have taken us into the "Twistedhed Zone" where laws are obsolete because you say so. Oh well, I should have known better, LOL.

>
> Whoa! What happened with the denominator?

Work out the alagbra Yeti. You can do that can't you? If not I'll do
it for you. Substitute the term "Icq*RL" for the variable "Vpeak" in
the first equation for the stage efficency as below:

(Vpeak)^2 / (2*RL)
N = ------------------------ * 100 Original equation
Vcc*Icq

(Icq*RL)^2 / (2*RL)
N = ------------------------ * 100 Step #1 Substituting terms
Vcc*Icq

(Icq)^2 * (RL)^2 / (2*RL)
N = ------------------------ * 100 Step #2
Vcc*Icq

Icq * (RL)^2 / (2*RL)
N = ------------------------ * 100 Step #3 Canceling out Icq term
in the top and bottom
Vcc

Icq * RL / 2
N = ------------------------ * 100 Step #4 Canceling out RL term in
the top division
Vcc

Icq * RL / 2 Icq * RL 1
N = ------------------------ * 100 = ------------ * --------- Step
#5 Rearrange fractions
Vcc 2 Vcc

Icq * RL
N = ------------- * 100 Step #5 Now just simplifiy by multipling out.
2 * Vcc

>
> >The efficiency is seen to increase as Icq increases up to the point

> > Vcc*(Imax / 2)
> >
> >Since Imax = Vcc / 2
>
> Wrong. Imax = (Vcc / 2) / RL

That's a typepo my part. You do understand that the maximinum current
has to be as shown below I hope. It's simple Ohm's law. I'm suprised
you got it wrong too, unless that was also a typepo on your part. The
correct line should be :

Since Imax = Vcc/RL.

>
> >Nmax = 25 percent
>
> Try again. Take your Nmax equation and drop in some correct figures:
>
> Vcc = 180 volts
> RL = 100 ohms
> Therefore, Imax = (180 / 2) / 100 = 0.9 amps; and
>
> (180)^2 / (8*100) 40.5 watts
> Nmax = ---------------- = ---------- = 50%
> 180 * (0.9 / 2) 81 watts
>

OK.

Vcc = 180 volts
RL = 100 ohms

Therefore, Imax = (180/100) = 1.80 amps, and

(180)^2 / (8*100) 40.5 watts
Nmax = ------------------- = ------------- = 25% as I stated before.
180 * (1.80 / 2) 162 watts

When the corrected value for Imax is used the efficiency is as I
stated. The common mistake people make is forgetting how to handle the

current question.

There is NO mockery of mathematics. A simple typo on my part has been
fixed in another post. The results are as I claim, 25 percent.

> NOW is the time for a little math. Given: Vcc = 180 volts and RL =
100
> ohms. For a square wave:

We are NOT talking about a SQUARE WAVE Yeti. If we were talking about
a sinewave then:

> Vrms = Vpeak = 90 volts

Oops Vrms = Vpeak/sqrt(2). I though they covered this stuff in High
School electronics?

Vrms = 90/sqrt(2)

> Ipeak = 180 / 100 = 1.8 amps

Should be Imax, but I'll let it go.

> Icq = Ipeak / 2 = 0.9 amps
> Irms = Ipeak - Icq = 1.8 - 0.9 = 0.9 amps

Oops noway are you getting away with this voodoo! Irms =
Ipeak/sqrt(2).

Irms = 0.9/sqrt(2)

> Pin = Vcc * Icq = 180 * 0.9 = 162 watts

OK

> Pout = Vrms * Irms = 90 * 0.9 = 81 watts

No, Pout = (90/sqrt(2)) * (0.9/sqrt(2) = 40.5 watts

>
> For a sine wave:

Now you decided to talk about sinewaves instead of square waves? Make
up your mind.

>
> Vrms = 0.707(Vpeak) = 63.63 volts

> So a Class A amp can convert no more than 50% of it's input power
into
> a square wave (maximum theoretical efficiency)

You have not shown anything in the way of a proof. And your number is wrong anyway.

>, but no more than 25%
> into a sine.
>
> Now THAT should clear up this whole discussion!

The whole discussion was about sine waves. All you did was confirm my statement about the amplifier is no more than 25% efficient with a sine wave. If you want to talk about square waves the efficiency can be over 90 percent. That analysis is based on the EXACT "square wave" in question because of the speed with which it transitions from one state to the other, and also IF the amplifier is driven in to cut off or saturation.

Mine wasn't a typo, it was a mistake because I missed that your power
equation was for power of a sine wave. I cleared that up in my other
post.

>a sinewave then:

Maybe you didn't read the whole post before you started your comments,
and didn't see that I address a sine wave in the next section. But you
still could have edited it afterwards.

>> Vrms = Vpeak = 90 volts
>
>Oops Vrms = Vpeak/sqrt(2). I though they covered this stuff in High
>School electronics?

For a square wave, Vpeak = Vrms, and they DID cover that in High
School electronics. Maybe you were sick at home that day...

>> Ipeak = 180 / 100 = 1.8 amps
>
>Should be Imax, but I'll let it go.

Agreed.

>> Icq = Ipeak / 2 = 0.9 amps
>> Irms = Ipeak - Icq = 1.8 - 0.9 = 0.9 amps
>
>Oops noway are you getting away with this voodoo! Irms =
>Ipeak/sqrt(2).

Again, this is a square wave, not a sine wave.

>> Pin = Vcc * Icq = 180 * 0.9 = 162 watts
>
>OK
>
>> Pout = Vrms * Irms = 90 * 0.9 = 81 watts

>
>You have not shown anything in the way of a proof. And your number is
>wrong anyway.

Which one? The one for the square wave or for the sine wave? Well, it
can't be wrong for the sine wave because you came up with the exact
same number. And the number was correct for a square wave before you
turned it into a sine wave problem.

>>, but no more than 25%
>> into a sine.
>>
>> Now THAT should clear up this whole discussion!
>
>The whole discussion was about sine waves.

The whole discussion was about the maximum theoretical efficiency of a
Class A amplifier.

> All you did was confirm my
>statement about the amplifier is no more than 25% efficient with a
>sine wave. If you want to talk about square waves the efficiency can
>be over 90 percent. That analysis is based on the EXACT "square wave"

What's the shortest antenna that will fit into a standard 3/8"-24 threaded mount?

I've got a good Firestik on the center of the roof of my truck, but I need to keep removing it to fit into a garage... and the 2' FSII is four bloody inches too tall. I thought about just going without an antenna on it whenever using that garage, but I'm worried that I'll forget that it's been removed and then key up and fry the radio.

Anyone have any super short GP antenna recommendations?

Thanks.

Cross-posted to: rec.radio.cb,rec.radio.swap

We've now added all our crystal charts for free download/printing (PDF) on our site. These 32 charts cover about 95% of all American mobile & base CB models, and show exactly which crystal(s) affects which mode or channel. Very useful for troubleshooting "dead channels" symptom, or for modification to 10M or other freqs.

Check 'em out at: www.cbcintl.com/xtals/xtals.htm

We specialize in CB books, plans, kits, and high-performance CB accessories. Please visit our Web site to see all those "goodies" you just can't find anywhere else!

www.cbcintl.com

You can also download our complete CB catalog, or just the Order Form from the home page. We've also got a new Email Order Form (for VISA/MC) if you're in a hurry.

* *
In case you didn't already know...

Who are we? Since 1976 we've been the leading supplier of books, plans, and kits just for CB radio. Do-it-yourself repairs and modifications, 10-Meter Ham conversions, amplifiers, FM converters, bleedover filters, adding new frequencies, etc. Secrets of how to increase your power, range, and privacy.

If I have an ego (and I do), it comes from plenty of experience in the matter. I suggest you try an experiment: Parallel two regulated power supplies, put them under a variable load and monitor the current at the load. I can guarantee you that one of these supplies will pop it's breaker before the load draws even half the expected maximum current.

>USE fuses in your output wires, not going to blow up anything...

...except a lot of fuses.

I suppose you have already tried a spring. There are quick-disconnect
and folding attachments available. You still need to get out of the
truck, but it's easier than screwing it in and out all the time. I
would recommend this over a shorter antenna.

433. Re: Update on Yeti's amp

Newsgroup: rec.radio.cb
Date: 2002-10-05 22:54:50 UTC
From: yeti@REMOVEcet.com
Message-ID: <3d9f6d78.14315871@news.cet.com>
Source record: 139213

```
Corrected for terminology:

Given: Vcc = 180 volts and RL = 100 ohms.

For a square wave:

Vrms = Vpeak = 90 volts
Imax = 180 / 100 = 1.8 amps
Icq = (Vcc / 2) / RL = 0.9 amps
Irms = Imax - Icq = 1.8 - 0.9 = 0.9 amps
Pin = Vcc * Icq = 180 * 0.9 = 162 watts
Pout = Vrms * Irms = 90 * 0.9 = 81 watts

For a sine wave:

Vrms = 0.707(Vpeak) = 63.63 volts
Imax = 180 / 100 = 1.8 amps
Icq = (Vcc / 2) / RL = 0.9 amps
Irms = 0.707(Imax - Icq) = 0.6363 amps
Pin = Vcc * Icq = 180 * 0.9 = 162 watts
Pout = Vrms * Irms = 40.5 watts
```

John,
For a chimney mount, two straps/brackets are the
minimum you should use. You also want to take care
about how much mast you use to hold up the antenna.
Chemnies(?) were never built to withstand the 'side or
twisting' forces you'll have with a very tall mast.
Good luck...
'Doc

I've got to say this: Though alot of people hate the constant bickering
and long technical threads, I've come to enjoy them. I've gained alot of
knowledge in the last few months reading this newsgroup. The fact that
there are some here who take the time to share their knowledge and
experiences with others is fantastic. I'm hard pressed to think of any
other time I've been able to gain so much free of charge.

Everyone knows keyclown sissies on 11 meters are queens. So what? So we have our
superiors out there trying to convince us that we ought to change our ways and go hetero. Look, I,ll make it real simple 4 u mean hammies who know more about reality than I will ever comprehend. We know the risks, if we take the chance, most of us are ready to deal with the consequences should the AIDS set in. I have lust for MOST hams,but I achieve gay sex contacts on illegal CB channels
at a fraction of the intelligence it takes to be even a no coder. If I appeal to a fellow gayboy, all they have to do is knock on my door. We will work it out and have us a good ole time together, just like I do with my wife Dweebo.
I have been in the same area for quite some years and have no problems being as gay as I want. If I am sucking anyone who wants it, why the hell should you care WHAT I do? The bottom line is I am queer and you aint. Get a life. You guys that bitch about us gaybanders and "peaked" radios have way too much intelligence for me to comprehend. I don't need to slurp anymore than 30 guys where I am located and I get invites on 555 from all over the world......yes.. on the queerband. Nothng makes me quiver in lust more than one of you hammies to come in to my conversation and start
preaching about rules. God, I love to suck you squashers.

Bert, I had a wire antenna that wasn't beautiful - it varied in height from 20 to 50 feet high. It was several hundred feet of 8 gauge wire and there was no feedline. The antenna simply entered my bedroom on the 2nd floor and was fed against ground (several 8 foot ground rods in different places, plus the hot water heat pipe in the bedroom). I didn't have rf problems and the thing got out beautifully. Across the country on 160. Washington DC from Rochester NY at 1:00 PM on 160 (btw, power was limited by FCC regs to 25 watts at night and, I think, 75 watts during the daytime). Worldwide on 15 and 20. South Carolina running milliwatts (yes, the net heard me down there in STANDBY - spotting only. No final, no driver.). It was fun.

I bought this radio one year ago. It has only been used by me as a base station, has never been in a car. I had it professionally tuned up. It has Variable PWR from .5 to 8 watts and modulates to around 30. Modulation has been tuned up as well. This is a VERY loud radio and has alot of swing. I still have the Galaxy 55 Box, mounting brackets, power cord, the original stock hand mic, manuals, and whatever else it came with. I have it all. Has the freq counter, large eas to read meter and has Bands A thru F giving you 240 channels. I promise you will not be disappointed with this Galaxy. $170 OBO... Thanks for looking

Source record: 139230

Bob, there is some erroneous information in the follow-ups to your query. While it is true that, under proper conditions, you can talk for thousands of miles, this relies upon F layer propogation. No good for close distances. Sporadic E can reflect perhaps as close as 100 miles (and that IS sporadic, not reliable). 70 miles calls for one of two modes. Despite rumors to the contrary, ground wave does not exist at 27 MHz. The two methods of communication are: 1) line of site and 2) scatter. Scatter will require considerable amounts of power (illegal and if done on a continuing basis - ESPECIALLY from your home - may cause neighbors to complain. Not good). Line of site will work well at 12 watts pep, however you will need an area with few CBers around (I hope you are up in Alaska). Let's face it, with 70 miles between you and the person you want to talk with, a 100 mw walkie talkie half a mile away will wipe out your communications. Also, there is a problem of antenna height. Assuming you are on level ground (or over water) with no obstructions between stations, you each need a 35 mile range to radio horizon. This will call for an antenna height of (35 * 35)/2 = 1225/2 = 612.5 feet. Yep, if both antennas are 610 plus feet high, you will have communications. If you are lucky and one of you is sitting on top of a 2400 foot hill (like my former neighbor), then it is easy. With no obstructions, that 2400 foot hill has a 70 mile radio range. Of course, you still have the problem of other people on the channel. Depending upon what you want it for, you might be better off using a UHF licensed service or MURS. With a VHF or UHF licensed service and a high gain antenna, you may well make that 60 mile range via scatter - and you won't have interference. Otherwise, the only reliable way (and scatter is reliable as long as you aren't on the fringe) would be low frequency and using true ground wave. That is not available.

You're right, I just read and commented as I went along. There was never a mention that I remember in your prior posts that we were discussing square waves. The assumption all along, at least on my part, was sine waves.

> >You have not shown anything in the way of a proof. And your number

>
> I would sure like to see your numbers on how you can get >90%
> efficiency from a square wave, especially when I have already posted
> the correct numbers and it comes out to 50% max.

A quick and simple explanation is all that is required. For a power device in saturation the voltage drop should be zero in the IDEAL case. Thus the power loss in the power device has to be zero since Vce = 0 and Pdevice = Vce * Icollector = 0 watts. For the power device in cut off Icollector = 0 and then again Pdevice = Vce * Icollector = 0 watts. For a PERFECT square wave the transition from high to low, or low to high, takes zero time, thus NO power is ever lost during the transition periods. Since there is only two possible states, and neither one results in power loss, the Max theatrical efficiency is 100%, no power was ever lost in the power device. Note It is generally considered that an amplifier operating with square waves only is not considered a "linear" amplifier any more, the classification for such "switch mode" amplifiers is called Class "D".

> I would also like
> your comments on my verbose explanation which you snipped.

The comments you get is what you see here. The theory has been very well established for nearly 80 to 90 years regarding the efficiency of the three main amplifier classes "A", "B", and "C". I also strongly suggest that you get a reputable text book on electronics that takes you though the development of the figures for the Max possible efficiency for the three classes.

For example:

Applied Electronics
A Publication of the Technology Press Massachusetts Institute of
Technology and
John Wiley & Sons, Inc. 1943
pages 423 to 429, "Maximum Power Output for Small-Amplitude Linear
Operation"

Electronics
Aldert Van Der Ziel
Published by Allyn and Bacon, Inc. 1966
pages 300 to 302, "Chapter 15 - Power Amplifiers"

Be careful about how the efficiency is being defined! Some authors
like to use collector, or plate conversion efficiency, while others
use total efficiency. Perhaps that is where the misunderstanding is
coming from?

Now if you stop and think for a second Yeti you will notice that Icq
<is in the middle of the load line>. So for the "ac componet ONLY" the
magnitude of Vpeak = Icq * RL, for the negative half wave of the sine,
OR Vpeak = (Ipeak - Icq) * RL, as you have it for the positive half
wave of the sine. But also note that the magnitude of (Ipeak - Icq) =
Icq for that case as well. So the original substition for the
MAGNITUDE of Vpeak is correct as I had typed it, Vpeak = Icq * RL.
There is nothing wrong with the math here. It sure would help if there
was a diagram to look at. That would help clear up some of the
confusion trying to keep a picture in one's mind as to what is
happening. Try drawing it out. That may help.

OK. Lets just keep the discussion to sine waves. Makes it easy for
everybody to stay on the same page. 8-))

Seems you have a beef.

Fact: Ground waves exist at all RF frequencies. The difference is that higher frequencies are absorbed much more easily than lower freqs. That limits the usable range of a ground wave for ANY frequency (RF power being equal). If that usable range is less than line-of-sight, it does NOT mean the ground-wave doesn't exist, just that it doesn't propogate very well. It also depends on the type of ground, some soils being much more lossy than others; such as sand as compared to heavily minerized soil. And who knows what was dumped at that superfund site near his house!

FYI, I tend to lump 'scatter' in with 'ground-wave' propogation, because for all PRACTICAL purposes it's the same thing -- radio propogation along the surface of the earth. And I'm not the only one that does it, because I hear the same thing while listening to hams on the air. Ok, so it's not politically correct. Regardless...,

If you are going to jump my shit about it while defending Timmy's claims of 50 kW mobiles, at least make sure that what he's hearing 60 miles away is actually scatter and not ground-waves. Because if I remember correctly (what I recently learned about scatter while studying for my license), it is usually a signal that tends to fade and distort quite a bit according to the phase interactions of the many reflections and refractions. And that doesn't sound like what Timmy was describing at all -- he claimed a loud, clear signal.

So unless you have some authoritative reference that says ground-waves don't exist at 27 MHz (which contradicts just about every textbook on electromagnetics ever written), I will stand by my conclusion that what Timmy was hearing was ground-wave propogation.

Nope, haven't tried a spring yet... or the quick disconnect. I've kinda considered both, but I'm worried about how it'll change the tuning--won't that increase the length of the antenna and cause problems with tuning?

> Pin = Vcc * Icq = 180 * 0.9 = 162 watts
> Pout = Vrms * Irms = 90 * 0.9 = 81 watts

You know for a square wave the power device is either in cut off or in saturation so there is, theoretically, no power loss in the device, except at zero signal conditions. Thus Pin = Pout and N = 100 %, which agrees with the figures I see for switch mode amplifiers.

>
> For a sine wave:
>
> Vrms = 0.707(Vpeak) = 63.63 volts
> Imax = 180 / 100 = 1.8 amps

> Pin = Vcc * Icq = 180 * 0.9 = 162 watts
> Pout = Vrms * Irms = 40.5 watts

40.5
N = ------- * 100 = 25 percent
162

Ah, that looks much better for a sine wave. Just for your info using a Class "A" amplifier with a square wave input, and driving it to either cutoff or saturation, is not considered linear operation. Most people refer to a "switch mode" amplifier such as that as Class "D" now. This could also be another point of confusion. If one is going to use an amplifier like that, for square waves, then there is no point in biasing it for Class "A".

Again you are forgetting the difference between DC power and AC power.
As a DC amplifier, a Class A amp can be 100% efficient (theoretical,
of course). But AC power is still sitting on top of a DC component,
which takes 50% or more of the input power. The result is that max
efficiency for a square wave is still only 50%.

> Note It is generally
>considered that an amplifier operating with square waves only is not

Class D amplifiers use PWM at a freq higher than the signal being
amplified and then the output is LP filtered. These can be linear and
usable for audio amps. Class E amplifiers use square waves at the
desired frequency and the output is BP filtered into sine waves. They
are only good for a single freq.

>efficiency for the three classes.

I have many. I usually just check my favorites but I just checked a few others, and they are all consistant with what I have said. I believe yours say the same thing, the difference being in our interpretations of this conversation. For example, the Comer reference you cited uses a power equation (Pac) for sine-waves only. It is not applicable to square, triangle, or even audio signals. I can understand this, as the conversation was oriented towards a Class A amp being used as a linear amplifier for RF (typically sinusoidal).

I would be interested if one of your references had a specific reference to the efficiency for a Class B push-pull.

<snip>
>Be careful about how the efficiency is being defined! Some authors
>like to use collector, or plate conversion efficiency, while others

Plate conversion efficiency is AC to DC power applied at the plate, which is not the efficiency of the amplifier. So no, I have no misunderstanding there.

The most important factor in determining reliability is the ambient
background noise. It must be held low. The ONLY way to do this
is through the use of a unused channel. Even better would be a
unused channel and slid down in frequency about 5 kc's. All this is
illegal, but who cares? SSB will most likely be a must too.

Other than the use of illegal clear channels any full size high
mounted antenna will do.

Not quite the same, as the equation does not define the bottom half of
the sine as dropping to ground. Since we are assuming that the output
is swinging rail-to-rail, it's the same difference in this case.

> But also note that the magnitude of (Ipeak - Icq) =

Again, they are equal because we are assuming full Vcc swing on the output. If that were not the case the two numbers could be very different.

Alrighty. Max efficiency of a Class A amp --when the signal is limited to a sine-wave-- is 25%; which, disregarding my poor math skills lately, is what I have already agreed upon.

AC power is still 50% of input power. The difference is that RL is
dissipating the full DC power as well as the AC power. At cutoff,
V(RL) = 0 volts and I(RL) = 0 amps, but at saturation V(RL) = Vcc and
I(RL) = Imax. All the power is being dissipated by RL, half as AC and
half as DC power.

I think I said the very same thing a few days ago. But I must amend my
comment because sometimes a square wave is exactly what you want. But
not for an RF power amp.

What good is monitoring the voltages when the voltages are the same? You need to be monitoring the currents. And even if you do that, you are just going to see one supply working it's nuts off while the other one is kicking back with a cold brew (but isn't that the way it always happens?) The point is to prevent that from happening. I provided a solution. There are other solutions, such as modifying one regulator to track with the other, but it would be cheaper and easier to just buy a new 20A power supply. Or, just add a little resistance on the output of each supply. Too easy. It's so easy, in fact,...

I am really wondering why some people are having such a hard time understanding this. Haven't I explained both the problem and the solution several times, and in several different ways? Did I not describe a simple experiment that can be used to demonstrate the effect? So what's the problem?

Hello Jason:

Think of the Oscilloscope as a fancy Volt meter, because thats what it is.

Two major controls, the Sweep and the Voltage controls. The sweep will adjust the time the sweep is sent across the screen, letting you see different frequency signals. The Voltage control will allow you to set how high the signal will be seen on the scope's screen.

Connect the scopes leads to the speaker leads of a radio and play around with the settings, you will get a feel for the scopes controls, and get to see real time AC wave forms.

Heres a neat trick that most don't know about. The scope can display your RF Transmitted Signal. You don't need a scope with a 27 MHz sweep rate, just the audio frequencies will do, say 500 to 2000 Cycles Per Second sweep time. By wrapping a short piece of wire around the coax, and connecting to the scope input leads, you should be able to see the transmitted signal. You may have to adjust the voltage control to its min setting. But this will display your transmitted signal. You will see the RF envelopes and carrier. Now you can turn up the modulation and see what happens to the signal.

You will in time get the hand of using a scope. I know a lot of guys who have a separate receiver set up so that the receivers IF signal is displayed on the scope, monitoring all the local traffic. Whos over modulated and whos not. Whos running a amp, and whos not, whos signal look like crap and who is clean.

Give it try, and good luck.

Jay in the Mojave

Yup, trunk is metallic and grounded to the body of the car properly. The antenna beacket itself is attached to the car body, not the trunk. Just a simple "L" bracket with three stainless screws attaching it right to the body of the car.

I wondered about the ground and the connector. I checked the resistance from the L-Brack to the connector at the back of the radio and it was very low & acceptable...about 0.4 ohms. I also made sure that I did not have a short in the PL-259 (we have all run across those "scraggly" little braid hairs). The connector seemed fine. I even doubted the meter but it appeared to work fine on my base.

I will admit that the surroundings could have a role in this so I drove the car to the mall parking at around 12:30 at night. Nothing was near the car, not for at least 400 feet in every direction. SWR was still the same.

Still stumped.....

Jason.

Way to go, George. Nothing like giving bad advice,
is there? Sticking your head in the sand doesn't make
the potential problems go away. It does mean buying a
lot of fuses, though. Along with plagarized CD's, do
you also sell equipment insurance??
'Doc

Alan,
The problem is in deciding who knows what, about
whatever the subject is. People don't seem to
recognize that you don't 'get something for nothing',
this power supply thing is a good example of that.
If it were as easy as just hooking up two PS's to get
double the output of either, wouldn't it be nice! Too
bad it doesn't work that way...
'Doc

Two Eyed White Cow Eater,
You got part of that right, but your aiming at the
wrong target. Turn that gun around and you'll be a lot
closer to the right target. In other words, you might
want to review what you 'think' you know about power
supplies and regulation.
'Doc

I agree. The reader has to make a decision as to who he thinks is correct. For the most part, I don't think it's that difficult. I just read the thread and make a judgement call. The cool part about the bickering is that it gives each party a chance to elaborate further. They will either demonstrate their electronic prowess, or be found wrong. Either way, I - the eager student - get a great education :) I guess I'm a debate junkie, or something.

It was a great question, I never thought of running two power supplies before. I've got a 20amp Samlex and haven't to date needed any more than that. Someday I will, I'm sure.

hi,

I recently saw patch for my george, it was about soldering a resistor of 560 ohm over the uniden IC in the control-panel.

They were also talking about some key-combination that came with it. I was supposed to press the power-key off and on, keep pa+dimmer pressed down, release it back press M1....etc...

Thing is...that the panel-light should stayed on before pressing M1...he just switches off, and i have to give in my key-code.

I am now working in AM/FM/USB/LSB 40 channel mode, but it seems that i cannot get to the 240 channels they promised me.

anyone who has a clue ?

Hello Brian:

My my but the truth hurts uh.

I never said the scope doesn't work in time domain function. You throw that in there as a arguementative slur to make you appear to look somewhat correct.

You forgot about the voltage function also, but I am gonna let that slide.

Using those fancy words without a good down to earth explanation to a new guy is the same as lying when some information is purposely left out.

How many blow hearts use fancy 50 cent words to impress someone. Some of the technical writting use such wording, and there books end up as a Drill Press Stop.

Ok your on here Brian, lets hear a good explanation of the use of "Time Domain" function in a Oscilloscope. We want the new guy to fully understand what "Time Domian" is.....

John,
When you shorten an antenna a ridiculous amount, you
get ridiculous performance. There's just no way around
that fact. I would have to say that before shortening
your antenna any more, I'd have to think about changing
it's mounting place, or where you park your truck. Once
you have shortened an antenna by about 50-60%, you start
to be able to hear the difference (loss). When you get
to somewhere around 80%, you're almost better off using
a dummy load...

0.4 ohms is indeed a low resistance, however, DC resistance and AC
impedance are two different things, and are affected by different
"components", and measured differently.

Try running a ground strap from your "L bracket" direct to the frame of
your car and see what happens.

You are correct that ground wave does exist to a point, however, that point is virtually gone much above 4 or 5 MHz. Light is also an electro-magnetic wave. If you and I take flashlights and see how far away we can get over flat ground at night, it is doubtfull we will see each other's flashlight at a distance much over 3 or 4 miles away (depending upon how high we hold that flashlight). Now, we both move 8 miles away. Of course, we still can't see the flashlight. At this time, we both switch to 1,000,000 candlepower searchlights and point them towards the sky. Hey, we can see each other's light! Not the searchlight itself, rather, we see the beam. That beam could contain information such as voice and we could receive it. That is scatter. True ground wave is caused by 'knife edge' diffraction. I used to use fresnel zone calculations in designing UHF television translators. What causes this is an electromagnetic wave passing over a sharp edge tends to get bent a bit. Now, what is a sharp edge? At UHF it could be a building or mountain top. At much lower frequencies (say the commercial broadcast band), the curvature of the earth seems like a sharp edge. Since you want a quote (and you might read up on this - there is a lot of misinformation about ground wave), I've bothered to look it up. Here is a quote from page 21.3 of the 2002 Radio Amateur's Handbook: "A ground wave is the result of a special form of diffraction that primarily affects longer-wavelength vertically polarized radio waves. It is most apparent in the 80 and 160 meter amateur bands. ..... The term ground wave is often mistakenly applied to any short-distance communication, but the actual mechanism is unique to the longer wave bands." As far as scatter, there are a number of mechanisms, but unless you are really on the fringe of the signal area (starting to have a small amount of volume of sky useful for scattering that is mutually observable), it is a very reliable means of communication. Those 30 and 50 watt VHF and UHF amateur mobil installations are often not true line of site to a repeater and they still can use the repeater very well. 70 miles on 27 MHz is NOT ground wave, guaranteed. It IS scatter. BTW, I used to work Washington, DC from Rochester NY in the middle of the afternoon. D layer absorption would prohibit any reflected skywave. That WAS groundwave. It was also 1.8 MHz where true groundwave does exist. Those flashlights (and even the searchlights) couldn't possibly cover that distance. Also, BTW, I was running 65 watts.
The key to the whole argument is over what constitutes a knife-edge. For the earth to act as such, the wavelength must be fairly long. Ground wave is pretty much gone above perhaps 5 MHz.

I read your post a second time - the distorting and fading scatter almost sounds like auroral propogation. Normal scatter depends upon a mutually visible portion of sky that allows the waves to be 'scattered'. Maximum distance via scatter (depending somewhat on local elevation at both sites) is perhaps a bit over 200 miles.

Chimney mounts? Don't use 'em. Period.

As someone else mentioned, a chimney is not designed to withstand the side stress of an antenna in the wind. You risk loosening the mortar between the bricks, especially with an older chimney. If this happens, having the antenna fall will be the least of your worries. New chimneys are expensive.

A 3 or 5-foot roof tripod is comparable in price and is a much better choice of mounting method.

I should add here that several lines of power inverters the company, I
work for, manufactures works just like the above discussion in regards
to the power device. I'm well aquatinted with the concept.

>
> Again you are forgetting the difference between DC power and AC
power.

> of course). But AC power is still sitting on top of a DC component,
> which takes 50% or more of the input power. The result is that max
> efficiency for a square wave is still only 50%.

Using square waves there is NO DC componet to the power. The power
device is either fully turned on, or turned off, i.e its working as an
electronic switch under those conditions, a square wave drive. There
is simply no in between. When using other wave forms the device spends
a significant amount of time in its active region, which is where the
power loss in the device comes from. I hope you have also noticed that
in the analysis a perfect power device was assumed, i.e. that Vce

saturation = zero volts.

If you still don't believe me then just replace the power device with a switch. You still get the same wave form output by operating the switch at the right time, i.e. a square wave. Then try to convince yourself there is still a big power loss in the switch. Sort of hard to do right?

It can be done since any wave form with a finite number of discontinuities can be represented as an infinite series as a sum of sine waves of different frequencies and phase angles. That is the concept of the Fourier series, and the Fourier Transform, both of which are used in DSP work and circuit analysis when dealing with non sinusoidal wave forms. The analysis gets very messy, and the results seem much less obvious. I wrote a number of MathCad worksheets that

use up to 512 to 1024 frequency componets, using the Fourier
Transform, when doing the calculations for the design for several of
the company's line of power inverters where I work. These worksheets
have been in use for several years and nobody has found an error in
them yet.

All of the numbers I see are 78.5 percent, i.e. the exact calculated
value is Pi/4 for a sine wave of course.

Yes that is true. The point was the max efficiency is 100 % under
Ideal conditions.

BS. You agree with the "letter of the law" as your statement shows,
Aanal Aaron. The "spirit of the law" doesn't say nobody can use more
than 4 watts.

> > When the laws limiting CB to low wattage

Prove it, Aanal Aaron. You can't. It has become difficult (but not
"impossible") to communicate on CB simply because of the sheer numbers
of operators trying to use the "legal 40".

Surely you can see that the
> wattage limit was enacted to allow everyone an equal chance to
> communicate. The spirit of the law is *equal access to communications
> for all*. If the FCC let everyone decide their own wattage -- they'd
> let only SOME people (the ones with extra power) communicate -- and

Once again you trumpet the "letter of the law", not the "spirit of the
law". Can't you grasp the difference? (rhetorical question; obviously
you cannot)

Now I really think optical EM doesn't have enough of a ground wave to
carry it 3 or 4 miles, unless your definition of ground-wave includes
scatter and line-of-sight.

>special form of diffraction that primarily affects longer-wavelength
>vertically polarized radio waves.

True ground-wave propogation is a refraction (not diffraction) caused
by the difference in propogation velocities of the ground below and
the space (air) above. Therefore, all that is required for a ground
wave is some degree of ground penetration. 27MHz does penetrate the
ground to some extent, and 160 meter penetrates much better.

> It is most apparent in the 80 and 160

For all practical purposes that's true.

>true line of site to a repeater and they still can use the repeater very
>well. 70 miles on 27 MHz is NOT ground wave, guaranteed. It IS scatter.

I think you have some confusion between scatter and air refraction.
Scatter is caused when a signal is reflected off of many objects at
the same time in many different directions. Air refraction is similar
to a ground wave in that when it passes through mediums of different
densities the wave will "change it's direction of travel". That's why
you get some really funky propogation when there is an inversion
layer, or when there is heavy fog or smog hanging on the ground. You
could almost call it a 'bent line-of-sight' propogation, but the
mechanism is the same as ground wave propogation. Either way, you
can't get scatter from the air unless the air is filled with objects
larger than the wavelength.

>BTW, I used to work Washington, DC from Rochester NY in the middle of the

>The key to the whole argument is over what constitutes a knife-edge. For
>the earth to act as such, the wavelength must be fairly long. Ground wave
>is pretty much gone above perhaps 5 MHz.

It's not "the earth" so much as it is the characteristics of the
ground. If the ground is nice and flat (no trees, hills, large rocks,
ditches, etc) a ground wave works pretty well even on higher
frequencies. This is obvious to any truckers that have ever driven
though the plains of the midwest -- you can talk well beyond
line-of-sight. You won't experience that in DC where there are too
many objects that will absorb or diffuse a ground wave of shorter
wavelength.

BTW, how much skywave reflection are you getting normally at 1.8MHz?

"Auroral propogation" is a form of scatter: the waves are scattered
off the aurora. But "urban scatter" sounds much different -- it is
much more chaotic. Actually, I never paid much attention to the
difference until recently.

> Normal scatter depends upon a mutually
>visible portion of sky that allows the waves to be 'scattered'.

...huh?

> Maximum
>distance via scatter (depending somewhat on local elevation at both sites)

I don't think I would put a number on that. Scatter is really a
function of chaos, and the variables are too numerous to assign any
kind of limitations.

Dummy load would be a good choice, I suppose. But I figured I'd run two antennas--with quick-disconnects on both. That way, it'll still be usable in a pinch... maybe one of those cheapo Radio Shack rubber duckie things would be good enough... then I'll slap the good Firestik on for trips and such.

Thanks all for the tips.

That's because switching power supplies already have some resistance
on the output -- the filter choke. If that wasn't there you would get
a hash in your radio that would make it unusable. BTW, switchers
usually require a minimum load, something along the lines of 10% of
maximum. Combine that with the built-in output resistance and there
won't be any problem.

One doesn't get skywave reflection on 160 during the daytime due to D layer absorption. 80 just might get a little very high angle reflection. 40 meters is the lowest amateur band that will penetrate the D layer near midday at some reasonable angle to allow you to work more distant stations. At night, it was fine anywhere in the US. I never really looked for DX. Back to the ground wave; as I stated, what is meant by true ground wave is that knife edge effect, which requires a reasonably sharp edge in comparison with the wavelength involved. There is confusion on the subject. Scatter also comes in various forms. Something on the order of 70 miles would be fine for decent scatter signals and not depend upon any other atmospheric involvement. Obviously, depending upon frequency, other enhancements can come into play, but not generally at 27 MHz. At VHF or UHF, tropo effects can give you a WHALE of a signal, but not at 27 MHz. 70 miles is short for sporadic e, plus it isn't available 24/7. As far as hills and such, you need a mutually visable section of sky that is suitable for scatter. If you have a mountain between you and another vehicle, scatter won't help. True ground wave doesn't have much problem with buildings and such any more than you would have a problem receiving am radio inside a building. The wavelength is going to be fairly long. It is a very specific (and very useful) mode. I agree that ground type will affect it; but what the truckers are experiencing is NOT true ground wave. Most of what folks call ground wave are, in actuality, various forms of scatter.

Huh? A square wave is DC with a switched amplitude!

>If you still don't believe me then just replace the power device with
>a switch. You still get the same wave form output by operating the
>switch at the right time, i.e. a square wave. Then try to convince
>yourself there is still a big power loss in the switch. Sort of hard
>to do right?

Of course there is no power loss in the switch, I never said there
was. But what are you switching? DC! The center of your square wave
rests on a DC potential, therefore it has a DC component. When you
change the duty cycle, you change the AVERAGE DC of the square wave!
That's how switching power supplies work! Don't tell me you didn't
know that....

<snip>

But your explanation didn't include Fourier transforms, it included
only a power equation for a sine wave.

That's what mine say as well. Why should they differ on Class A
efficiency?

It can't be under square wave drive, and where the output is a square
wave. You can prove that easy enough by replacing the power device
with a switch. When the drive square wave goes high the switch turns
on, and when the drive square wave goes low the switch turns off. You
still get the EXACT same waveform across the load, but don't tell me
half the power goes in to heating the switch. Also since the power
device is either fully turned on, or off, it makes no difference where
the power device is biased since it NEVER operates there. A perfect

square wave jumps between its two states in zero time!

There is in fact an amplifier that some guys built using switching
type waveforms, it is a Class "E" amplifier.

http://www.its.caltech.edu/%7Emmic/reshpubindex/scott.html
http://www.delphion.com/details?pn10=US05187580

Its a given, since if you don't then it is no longer a sine wave.

Can't be if the waveform is to remain a sine wave. and I'm assuming a
sine wave for the analysis. The upper and lower halves must be equal.
That's why the term replacement can be made as it is.

OK. I'll also agree the efficiency will change based on the waveform
as well. Sine waves are nice test signals to use, and they are also
very easy to use to analyze circuit functions.

The low band Larson antennas are a little picky about the ground, especially when the base of the antenna is elevated as in your situation. Even though the bracket is mounted to the body, the majority of the trunk lid sits on a rubber seal and is somewhat isolated from the point where the bracket is attached. You might try a trunk lip mount that grounds the antenna base to the mass of the trunk lid and use thick ground straps to bridge the trunk hinges to the car body.

What I meant was that the signal may not be rail-to-rail, and if
that's the case then Vcq may not be Vcc/2, etc. I suppose I should
just stick to the discussion where the signal is zero to max.

<snip>

>> Alrighty. Max efficiency of a Class A amp --when the signal is

For linear amplifiers (audio, not RF) I prefer square waves because
when looking at the scope the peaks are more well-defined. They also
tend to show ringing, residual capacitance, and a host of other
distortions you can't see with a sine wave. But, of course, that's off
the topic....;-)

I should have said "linear". I am familiar with Class E amplifiers, as
I have already described them in another post in this thread. Good
links, however:

Source record: 139417

Salvia Divinorum has been compared to LSD by a recent ABC news article
http://abcnews.go.com/sections/us/DailyNews/divinorum020401.html

The http://www.iamshaman.com web site devoted to just Salvia Divinorum
and also has a online forum which has over 300 members who enjoy
discussing this exciting e
ffb
ntheogen. If you are interested in
buying some Salvia for yourself (as a smudge only) please come on over
and check out the IamShaman Salvia Divinorum store at
http://www.iamshaman.com/store.htm

Nothing sold at iamshaman is for human consumption so please don't
email them or call with questions regarding dosage levels. Even though
their products are not sold for human consumption (WINK) if someone
was foolish enough to either smoke his enhanced Salvia Divinorum products
or use his high Tincture you would not have anything to worry about
because they use the highest standards and infuse only 99% pure Salvinorin A
(the concentrated hallucinogen) from Salvia Divinorum into their enhanced
leaf and use pure Salvinorin for their tincture products too.

Products from iamshaman.com are free of any kind of contaminate.
What you will get is just Salvia Divinorum enhanced product - nothing
more or less but the very best. I think you will find the prices in the
salvia store to be better than anywhere else. They extract their leaf
with great love and care and put this into everything they sell.
Individuals who wish to remain anonymous and live in the Chicago area
can purchase their products with cash by appointment only, as they
do not have a walk in store and are primarily an internet business.

If you are just interested in joining the iamshaman forum to learn more
about Salvia before you buy, you can apply via a link on the main web
page at http://www.iamshaman.com - In order to join this group you must
agree that you are not a part of any kind of law enforcement organization.

Salvia Divinorum -is legal- but only if it is not sold for human
consumption. If you buy Salvia from IamShaman.com do not ask dosage
questions or indicate that you intend on using it as a drug.

This post was NOT made by iamshaman or anyone associated with that
business, group, or web site.

The nature of the power supply is to amplify current. If there is no current, the voltage cannot be regulated. This isn't too much of a problem with linear supplies because they just sit there at max voltage until a load is applied.

But a switching supply works differently. It switches (at a fixed frequency) between full power and no power, and then filtered to average the voltage. If there is no load then it would never need to pulse to full power except once. But it can't do that, it must switch in full power regularly, even if for a very short time per pulse, in order to maintain a smooth output voltage. So that power must be either used or bled off, or the voltage will quickly climb to that of the supply input (which can be very high -- the supply in your computer runs off 120VAC and outputs 5VDC). So operation below minimum load will either damage the power supply or whatever it's connected to. It therefore requires a minimum load which is determined by the shortest time for the 'on' pulses.

If you didn't follow that, Leland could probably explain it better than I did.

Depends on what you like. If you are into tubes I have that Hallicrafter's CB-3A, modified with crystal sockets on the front panel. For test equipment I still have my Hickok 121 cardmatic, but shipping might be a bit too expensive. On the bench there are a couple low-end sig-gens and an older single-trace O-scope. I also have piles of old CB radios, take your pick. For serious DXing I have an Ameco PT-2 preamplifier (manual is on the web). In consumer electronics, I just picked up a nice Technics SA-GX670 surround-sound receiver (110 watts x 2 or 80 watts x 4), and I still have that portable JVC AM/FM/PB/TV. Or maybe you are into antique broadcast radios -- I would have to compile a list for all of those. Or maybe you would like something educational...

I really don't think I have anything you would be interested in, Timmy. Oh...wait! Silly me, I almost forgot you like illegal stuff. Well, I still have that FM modulator, crystal controlled to 105.3 MHz. Intersted in pirate TV? I also have a TV modulator for Ch. 11. How about that?

Not really. You are right, some switchers have a built-in load, but
that's not always a good idea because that internal load may not be
intended for continuous no-load operation. It doesn't hurt to switch
off the supply when you are not using it; after all, it doesn't take
any warm-up time.

I once drove from the Central Valley of California to Gillette, Wyonimg
and back over a 3 day weekend. It took me 26 hours to get there. I
visited with friends I hadn't seen since I was in the 2nd grade for 6
hours, then turned around and came back. Ont the way back, I routinely
slammed on by brakes to avoid hitting those big gizzly bears on I-80
through the salt flats :)

It's a great story, and funny as hell to tell. I was an idiot, and would
never do something that stupid again.

Cost? Gas money, coffee, and ephedrine. Oh, and I probably took a year
off of my life :)

I had one of those units around 30 years ago. If that is the one with the tunable receiver, and 5 or so Tx channels, that is a very hot unit. One of the best receivers I've seen in years. I remember it having a crystal filter at the 1st I.F. and a low 2nd I.F. of around 262kHz. Good luck!

Pete

Subject: The Big V followed me! Some of you may be infected by this
"troll" not w-w!
Newsgroups: alt.religion.w-w-church-god
Date: 2002-03-07 10:24:48 PST

Hi Jamey, My name is Woody Parr and I'm up the road in Cornelia. I'm
afraid that I'm indirectly responsible for this troll who is
badmouthing you at alt.religion.urantiabook. You see he was only there

in the first place to attack me.

This idiot is Steven J. Rogovich, 1612 Lake Christopher dr. Virginia Beach, Va. 23464 He followed me to the UB usenet page from alt.radio.pirate He and I (were) both formerly loosely associated with each other in the shortwave pirate radio listening hobby. I USED to be a shortwave pirate but my station has been permanently retired for more than 2 years now. Stevie is still a pirate and is the operator of the station Radio Free Speech. He is also the moderator of a message board at the Free Radio Network < www.frn.net > and goes by the handle of Pat Murphy there. I had a falling out with the people at the FRN a couple of years ago as they became corrupt and were doing so inappropriate things. I dared to open my mouth and openly complain about there stupid activities which since they havn't yet ceased to follow me around the internet anywhere they can and attack me.

Steve is also on the usenet trolling people under the name of Richard Cranium (richardcranus@yahoo.com) He's far too much of a coward to debate anyone using his real name.

Still works for me. Wouldn't matter if their ISP knew or not. Those pages
are hosted on Geocities. It is Geocities who would close the pages, if the
ISP used that as an excuse to cancel the account the web page would still be
up and could be maintained from ANY computer provided you knew the user/pass
for the site.

I must've really upset you. Good. For someone to remember these thoughts gives them something for which to reflect against.

I am not even close to a socialist. I am the most freedom loving conservative, free market, capitalist that there ever was. But absolute freedom is anarchy. As much as I might like to do what I want all the time, I am not living alone on a desert island. I have to share this land with other people, so I have to respect their rights as well. Such is the basis for the laws that govern us.

What you failed to understand was that for society to function, there must be laws. Laws remind those of us who have morals, and give us a platform to use against those who don't.

No one said that everyone has to wear their hair a certain way, and go to the bathroom on even hours, and all drive the same car etc. But there are some BASIC laws that need to be followed, if society is to continue to remain civilized. This in spite of the fact that we're breeding new generations that do not understand this concept and continually challenge and defy anything that they don't personally agree with, and who seem to have the misbegotten notion that they can selectively ignore any and all laws that they don't agree with, and who whine incessently when caught and punished for their indescretions, or even when their lack of civility is pointed out to them by those who live to a higher standard.

If we, as a society, allow people to ignore certain laws, then what message does that send about our ability to enforce the remaining laws, and about our resolve to maintain a (somewhat) orderly society?

Dave

Hasn't worked and it won't work, Aanal Aaron, because YOU are the only
real "pest" in this newsgroup, and also because you're smearing an
innocent person (who doesn't happen to be me as you, yourself,
proved). You can't stand it that I won't follow your instructions and
"go away"! Don't worry, I'll be right here to correct your deliberate
misquotes, counter your TROLLing, and make you even more frustrated

and desperate than you already are. Pathetic little boy, for sure.

Obviously he is that stupid! He offered to "Gladly" post proof that I
was "Steve", but he can't because he doesn't have any such proof. But
he will not simply admit the fact, either. He's never been correct
about anything but won't stop posting his deliberate
misinterpretations and inaccurate statements.

But since he's just a TROLL and he's not trolling a troll, he's also a
Liar First Class. Too bad he can't post anything logical or correct;
he might actually have some value as a human being if he could.

Dave Hall, with semi-sticky palms scribed:
>I must've really upset you.<<

You're incorrect, again. I just enjoy educating commies and socialists
and if I can't do that, I just point it out for all to see.

> Good. <<

Well, of course if you were able
to upset me that would be "good" for you. It illustrates your troll
status perfectly and
shows your true colors immensely. Too bad you failed.

>For someone to remember these thoughts gives them something for which
to reflect against.<<

Oh, and I do...most socialists, commies and would-be-dictators are
remembered quite well. Don't worry Hall, your socialist attitude and
shitty disposition will be reflected on as long as you are present.

>I am not even close to a socialist. <<

You apparently have no clue what one entails because the fluff you
spread is the perfectly parallel with the socialism.

>I am the most freedom loving conservative, free market, capitalist that
there ever was. But absolute freedom is anarchy. <<

Your opinion means nothing in contrast to Thomas Jeffersons. The
affliction of delusion manifests once again from you........

>As much as I might like to do what I want all the time, <<

Here is where you are wrong,,,again. No one here except YOU has claimed
they want to do what they want ALL the time besisdes you?
We selectively disregard certain rules. You admitting you would LIKE to
do whatever you want ALL the time echoes a much more criminal prone mind
than anyone you hurl stones at.

>I am not living alone on a desert island. I have to share this land
with other people, so I have to respect their rights as well. <<

Then buy a house and get out of that apartment so you have your own
property you don't have to share.

>Such is the basis for the laws that govern us. <

Says you.

>What you failed to understand was that for society to function, there must be laws. <<

Never took issue with that so we can just snip you're rant....you're preaching to the choir and I never claimed that laws must not exist, only that certain laws are bad, outdated, and serve no funcion and that we shouldn't blindly follow all of them.

>Laws remind those of us who have morals,<<

So do the actions of one who attempts to takes pleasure in "Upsetting" another.
Keep going Hall, your foot is already being digested a small ways past your esophagus.

> and give us a platform to use against those who don't. <<

But you don't qualify as an "us", as your extreme views are in the minority here. 'US" can only be construed as who "Aaron" referred to when namin his trouble posse. Yourself, George, Frank Gilliand and KC8LDO Lelnad.

>No one said that everyone has to wear their hair a certain way, and go to the bathroom on even hours, and all drive the same car etc. But there are some BASIC laws that need to be followed, if society is to continue to remain civilized. <<

Yup, well DX isn't a "basic" law and labeling those who are do so criminals
is a lesson of absurdity from your grey matter.

>This in spite of the fact that we're breeding new generations that do not understand this concept and continually challenge and defy anything that they don't personally agree with, and who seem to have the misbegotten notion that they can selectively ignore any and all laws that they don't agree with, and who whine incessently when caught and punished for their indescretions, or even when their lack of civility is pointed out to them by those who live to a higher standard. <<

Hey, you just described yourself to a "T",along with the other troubled posse members. I never brought anythign to you rabid hammies door, y'all brought it to mind and cry like a little baby when it's dished back your way.

>If we, as a society,<<

You are not a part of society at large. At least of the majority views.

> allow people to ignore certain laws, then what message does that send about our ability to enforce the remaining laws, and about our resolve to maintain a (somewhat) orderly society?
Dave
"Sandbagger"<<

You don't have a choice in
"allowing"" anything another does. This is what greatly upsets you. Get
over it and your socialistic ways.

The Supreme Court has ruled that there cannot be a nativity
scene in Washington, DC, this Christmas.

This isn't for any religious constitutional reason, they simply
can't find three wisemen and a virgin in the nations capitol.

However, they had no problen finding finding enough asses to fill the
stable.

One day, Jimmy Joe was walking down Main Street when
he saw his buddy Bubba driving a brand new pickup.
Bubba pulled up to him with a wide grin.

"Bubba, where'd you get that truck?!?"

"Bobby Sue gave it to me" Bubba replied.
"She gave it to you? I knew she was kinda sweet on ya,
but a new truck?"

"Well, Jimmy Joe, let me tell you what happened. We
were driving out on County Road 6, in the middle of
nowhere. Bobby Sue pulled off the road, put
the truck in 4-wheel drive, and headed into the woods.
She parked the truck, got out, threw off all her
clothes and said 'Bubba, take whatever you want'.

So I took the truck!"

"Bubba, you're a smart man!. Them clothes woulda never
fit you".

Source record: 139338

From: ahvoobner@yahoo.com (Aaron H. Voobner)
twistedhed@webtv.net (Twistedhed) wrote everything that showed "Aaron" is mistaken.
Title 47 US Code Of Federal Regulations.
It's not marlarkey, Twist. It's the law. <<

Some laws are outdated and obsolete, such as the one on the books that says you can't hang laundry on a Sunday within 250 feet of a church in certain parts of Kansas. There exist a ton of such laws still on the books.

>Outdated?<<

Yea. You think one should still be arrested for hanging laundry on a Suncday near a church?

>Drop "Rabbit Ears" a postcard and ask him which outdated laws are responsible for his current problems. <<

"Rabbit Ears" wasn't merely talking DX or using lowpower on the freeband between channel cb 40 and 10 meter, either.

>Or ask Frank Kluz, of Lancaster, OH who got a $5,000 NAL in August from the Detroit, MI District Office for using a CB linear which outdated laws took a bite out of his bank account. Or cruise thru a list of folks whose wallets are lighter thanks to these "outdated laws": http://www.fcc.gov/eb/Public_Notices/Welcome.html
<

You post the exceptions, not the rule like you would prefer us to believe.
I remind you to check and recalculate the odds...you have a better chance of getting struck by lightning than the average freebander or low power user does of getting an NAL, regardless the smoke and propaganda you try to blow here. Cold hard facts and your opinion concerning the few idiots that deserved to get popped mean nothing to the vast majority of cbers.

>No, there are not FCC agents on every street corner. Yes, in many cases you'll be able to "get away" with violating CB rules and not get caught. But when you foster the idea that people should not obey federal regulations concerning CB because they are obsolete and outdated -- that's misinformation, plain and simple.<<

Who fostered the idea that another should disobey? I certainly didn't, but you claiming I did is definite misinformation, plain and simple.

>This thread started with my response to Lennie' Stover's post . I challenged his excuse that "we need linears to walk on people using linears". You stepped in, and within a few exchanges have taken us into the "Twistedhed Zone" where laws are obsolete because you say so. Oh well, I should have known better, LOL.
-Aaron-
<<

Yup, but you didn't...hence the loss of your voobner@yahoo addy. There are a lot of things you should know better of but are still learning. BTW, I like the "Twistedhed Zone" thing. May I have your permission to use it on the air? Maybe I'll shorten it to the "Twisted Zone"....yea,,,,that has a better ring to it....you are now entering the "Twisted Zone". Sounds much better than "Twistedhed Zone". See, I can always improve on what you set forth :)

If you are implying that people, who
hold ham licenses, should be somehow
held to a higher moral standard than
the "common man", then that would
be faulty logic. A ham license is only
a "permit" to use radio, it is not a
"badge of morality".

The 807 and 572 (beam power tubes) are just a tiny part of the big
picture. What Tim can't tell you is that vacuum tubes are used for
things besides RF amplifiers. Since "CB knowledge" begins and ends
with RF amplifiers, you'll always get a rather limited view of the
universe in rec.radio.cb. It's like knowing only the first verse of a
song. For example, you'll never hear of the famous 12AX7, the
ubiquitous 6AQ5, or the workhorse 6V6 found in audio and oscillator
stages of stuff from superhet receivers to mike preamps and CW rigs;
or rectifiers like the 5Z3 and 5R4, and voltage regulators like the
OA2 and OB2. So if you want more than just part of the picture, seek
higher ground, go on eBay and grab a 1960's copy of the ARRL Radio
Amateurs Handbook to get a snapshot of the classic tubes applied to
practical circuits, or poke around on sites like
http://www.ominous-valve.com/tubes1.html and
http://www.vacuumtube.com/

Hi,

I already experiment the skip communication, using a CB Base (Cobra) with an antenna (Lantron) and I am interested to equipped myself to repeat the experience. That is why I am looking for a CB Base with an antenna. If you have such equipment to
sell or to give, you can contact me via e-mail.

Hello Jason:

"Time Domain" is fancy word used around oscillosopes, and other type of test equipement, such as the The Time Domain Reflectometer, or simply called a TDR. The TDR is a piece of test equipement that tests Coax Cables. It sends a pulse out and listens for it, and displays it in time that is calibrated in Feet or inches, real hard stuff. I can show you how to use a TDR in 15 Minuites, then you can walk around saying "Time Domain Reflectometer" all day.

Becasue the Oscilloscopes has a trace that displays the time as compared to the voltage seen by the Oscilloscope, it displays voltage relative to or compared to time. The Time Domin, big deal.

You could also say the the Oscilloscope will display a Voltage Amptitude Domain, if your in to long winded and fancy words.

A lot of guys get tripped up with all the fancy words and such. If you listen to Rock n Roll, and like Girls, you'll see thru all it.

>Listen to the pot call the kettle black, you are the one who keeps insisting I post my callsign to prove something to you, so you go first...name, address?<<

Better reread your threads and remember who you're replying to......it wasn't me who asked for your call, and it certainly isn't me that "keeps insisting" you prove anything. As far as I'm concerned, you're unbelieveable anyway.

> Hummm, just as I thought. I really don't care to know any personal information about you or anyone else here, you seem to be the one who demands that information. <<

No, it's not as you thought at all. You're so upset, you have taken to outright lying like Lelnad KC8LDO without thinking what you're posting and who you're posting it to., merely claiming I did something when in fact, twasn;'t I at all. See, you don't even rate the curiosity factor with me, which is why once again, only osers like yourself enjoy playing the hide and seek game of "guess who I am?" because Frankly, no one else cares about identities except the trouble posse named by "Arron", of Lelnad KC8LDO, Dogie, FraNK, And Geogre and Dave Hall.

>Maybe you can't even pass the test for a nocode license. <<

You HAVE stated you are not a nocode.

>Exactly, I hold an Advanced class, and you? <

You said you don't care. Can't make up your mind from line to line let alone post to post. Par for the course.

>I know you are trying to be a wit twistie, keep trying you're half way there. <

Gee, you're so clever....and right on time with the insults....but it doesn't detract from you being consistently wrong.

>thats franks attempt of trying to sound like he always knows better. the 572b's
>come a dime a dozen

Hardly. If you check a few sources like I have you will find the
Chinese 572B's going for an average of around $40 each, while you can
still find NOS 811A's and 812A's for less than $10 a pop. The
disparity is because of the popularity of 572B's with audiophiles.
Same deal with the 300B's. The 807's are almost literally a dime a
dozen, and in it's different configurations has been a very popular RF
tube over the years, much more popular than the 572B.

> and theres no shortage of good amps that run them. the
>tubes he mentions might be good for a homebrewer but not for ready buying

I'm not sure what you mean by that, but like I said, there has been
plenty of RF equipment manufactured that uses the 807 and the 812.
FYI, the 812 is the RF variation of the 811, another tube popular with
audiophiles.

Well, I would boil it down like this...
The scope is capable of not only measuring voltage levels... but measuring those levels over a time period... and having the ability to look at a voltage level that is occurring in a very small slice of time. This is why the scope is infinitely more valuable than a simple voltmeter that is taking its Voltage readings and averaging them over a very long time period by comparison. The scope has the ability to view instantaneous voltage readings. As you know... this ability is what makes the scope a useful tool when viewing fast changing or erratic waveforms.

SWR has to do with the match between the radio and the antenna via the coaxial cable. You will need an SWR meter to make the adjustment. If you don't have one "built-in" to the radio that's in your system, you will have to obtain one. They are relatively inexpensive (around $20-30) ore than likely can be purchased locally...

Well, "Arron",,let's see why you clipped the rest of the post you quoted...could it be that my answer was in proper context to a fellow freebander and you merely tried but failed to make it look as if I was encouraging one to do so? But of course.....unedited and in it's entirety, the post appears below in it's original context...but you spend way too much time in the archives trying to dig up "something" (chuckle) on me....sorta like Nad did for so long, huh?

From: b1wwgh99@pop6.sympatico.ca (Chris_S)
What's the state of CB these days? I haven't been into it since the early 90s when I had a Uniden HR2510 and an Antron vertical. Worked lots of European freebanders back then.
But what's it like these days? My scanner tells me many truckers have switched to 2 meters. Has this plus cellphones and FRS really put a dent in the CB population or not?
thanks,
Chris
-
"Hi Chris, and welcome back. Jump back in, the DX is running heavy and the radios are easier to get since back then..so is a little smoke, or fire for your wire, just in case. The linears have become bigger and better. Seeing as you have been a freebander in the past, no sense in mentioning legalities since you are already aware of them...BUT...please do not become upset with the jumping up and down of the nocodes that I own here...,you will recognize them by the constant attention lavished upon me by them.... I have this effect on losers like that when I speak of the freeband..all the blood rushes to their ass and they attempt to form sentences from their rectum...KC8LDO, Lelnad C. Scott appointed himself head of my fan club and tattooed his forehead with a "T" as a tribute to me...he also forges me as a last desperate attempt to get attention because no one pays him attention anymore. On often occasions he resorts to attacks from anonymous email addys whenever one speaks of cb in a manner not consistent with his views...IE: freeband, linears, even other hams that question him. He also lies. About everything,..cb enforcement included. He is our resident rat, along with N8WWM....Watch him.
Now that you were properly indoctrinated to the ways and means of this here group, I would be glad to point you in the direction of anything that may assist you in your return to cb should you care to do so. If you wish to skip the crying and howling of the dogs concerning legalities, email me if i can be of any assistance. Most all of the regs in here are friendly happy, helpful folk.
A killfile will do wonders for you once the dogs try to hump your leg.
If you are in the need for a radio or other gear, lots of techs and

dealers hang here and can take good care of you. Merry Christmas.

Still say you never asked for my call? Now who's lying? I haven't
asked you to prove anything because I know you haven't anything
worthy to prove, just an appliance cb operator who hides behind
his 'handle'. I only ask you for a possible call, name or address
after you first asked for my call, before that I never asked you
proof of anything.
By the way there is no semicolon in wasn't.

> See, you don't even rate the curiosity factor

Hi Jamey, My name is Woody Parr and I'm up the road in Cornelia. I'm afraid that I'm indirectly responsible for this troll who is badmouthing you at alt.religion.urantiabook. You see he was only there in the first place to attack me.

This idiot is Steven J. Rogovich, 1612 Lake Christopher dr. Virginia Beach, Va. 23464 He followed me to the UB usenet page from alt.radio.pirate He and I (were) both formerly loosely associated with each other in the shortwave pirate radio listening hobby. I USED to be a shortwave pirate but my station has been permanently retired for more than 2 years now. Stevie is still a pirate and is the operator of the station Radio Free Speech. He is also the moderator of a message board at the Free Radio Network < www.frn.net > and goes by the handle of Pat Murphy there. I had a falling out with the people at the FRN a couple of years ago as they became corrupt and were doing so inappropriate things. I dared to open my mouth and openly complain about there stupid activities which since they havn't yet ceased to follow me around the internet anywhere they can and attack me.

Steve is also on the usenet trolling people under the name of Richard Cranium (richardcranus@yahoo.com) He's far too much of a coward to debate anyone using his real name.

Someone mentioned slingshotting it awhile back,,,may have been
Mopar...that sounds pretty fun, too!

Sure is. That's what I use...a genuine pocket-rocket with a small bass
sinker to propel the first line (monofilament) up over the desired limb.
That line then is used to haul a slightly heavier twine up and over, which
in turn hauls up the final Dacron support rope. Sounds more fun than it
really is.

standing wave ratio (SWR): The ratio of the amplitude of a standing wave at an anti-node (minimum) to the amplitude at an adjacent node (maximum). (188)
Note 1: The standing wave ratio (SWR) in a uniform transmission line is given by
SWR= 1 + p / 1 - p
where p is the reflection coefficient.

Note 2: Reflections occur as a result of discontinuities, such as an imperfection in an otherwise uniform transmission line, or when a transmission line is terminated with other than its characteristic impedance. Basically, Kinks in your cable could cause HI swr, Breaks in your cable, and your antenna not tuned correctly.

You should be able to adjust the SWR by the tuning set screw in the antenna. Do not cut your cable. That will not work.

Check your SWR's at the Low end of your frq, Mid and top end of your frq try to adjust for the lowest at all frq's.

Buy an external SWR/power meter. They tend to work better than the internal radio meters.

He can and does. But it seems that YOU can't read his replies -- case
in point: Where, in any post, did he say that "all 10 meter radios are
illegal"? And if you troll him because you think he is anti-CB, then
why did you totally ignore "Bob" that was CLEARLY anti-CB? Still don't
have answers for those simple questions, Clyde? I didn't think so.

BTW, who am I this week, Clyde?

Chad why don't you just go down to your local Ham Radio toy store and pick up a copy of the ARRL Handbook for Radio Amateurs, (a must have for all radio enthusiasts). They have a entire section on building amps and the power supplies needed to run them including schematics. This book also gives out good antenna projects, building antenna tuners, pre-amps and everything else to do with radio. They have a new edition out every year. The one I have here is the 1995 edition and it sold for around $30.00 US. A better investment then some CD ROM.

Good Luck and Keep it Clean

Try this: "Hey Voob, do you live near a navigable waterway?" Or this: "Hey Voob, do you own a boat?" Of course it's just easier to jump to the conclusion that he operates the radio illegally, isn't it? I suppose when you are stoned all the time you need to keep things simple and not clutter your brain with logic and reason...

OFFICIAL MALE SENSITIVITY TEST:

1. In the company of females, intercourse should be referred to as:
A. Lovemaking.
B. Screwing.
C. Taking the pigskin bus to tuna town.

2. You should make love to a woman for the first time only after you've both shared:
A. Your views about what you expect from a sexual relationship.
B. Your blood-test results.
C. Five tequila slammers.

3. You time your orgasm so that:
A. Your partner climaxes first.
B. You both climax simultaneously.
C. You don't miss the football

4. Passionate, spontaneous sex on the kitchen floor is:
A. Healthy, creative love-play.
B. Not the sort of thing your wife/girlfriend would agree to.
C. Not the sort of thing your wife/girlfriend needs to ever find out about.

5. Spending the whole night cuddling a woman you've just had sex with is:
A. The best part of the experience.
B. The second best part of the experience.
C. $100 extra.

6. Your wife/girlfriend says she's gained five pounds in the last month. You tell her that it is:
A. Of no influence on your affectionate feelings for her.
B. Not a problem, she can join your gym.
C. A conservative estimate.

7. You think today's sensitive, caring man is:
A. A myth.
B. An oxymoron.
C. A moron.

8. Foreplay is to sex as:
A. An appetizer is to entree.
B. Primer is to paint.
C. A long line is to an amusement park ride.

9. Which of the following are you most likely to find yourself saying at the end of a relationship?

A. "I hope we can still be friends."
B. "I'm not in right now, please leave a message at the beep."
C. "Welcome to Dumpsville. Population, YOU."

10. A woman who is uncomfortable watching you masturbate:
A. Probably needs a little more time before she can cope with that sort of intimacy.
B. Is uptight and a waste of time.
C. Shouldn't have sat next to you on the bus in the first place.

Evaluating Results:
If you answered "A" more than 7 times, check your pants to make sure you really ARE a man.
If you answered "B" more than 7 times, check into therapy. You're a little confused.
If you answered "C" more than 7 times, "YOU DA MAN!"

Regards,

Peter.

OK, lets have a go at a fairly simple explaination...

A volt meter is used to see a "snapshot" of the voltage at one instant
in time.
An oscilloscope will show that voltage over a period of time.

By watching the voltage over a set period of time, you can tell the
approximate frequency (not as accurate as a digital counter), peak voltage,
modulation on a carrier, and you can identify a type of distortion.
An example of this use could be if an audio amp is distorting. By putting a
sine wave into the amp and looking at the waveform out, you can often
identify the type of distortion, which can help you to work out what the
fault is. You can also use a square wave as a quick test of audio frequency
response.
If a circuit is putting no signal out, you can trace back to see where the
signal disappears.

The horizontal axis represents time, with the length of time represented
being adjusted with the "Timebase" control. The control is marked in
Milliseconds and Microseconds.
The vertical axis represent voltage level. As with a voltmeter, the voltage
represented by full deflection can be adjusted for different voltage ranges.
This is the "Volts/CM" control.

Usually, there is also an option to switch the timebase off and use an
external signal for the horizontal also. In this state, both horizontal and
vertical represtent voltage... each being for one of the two signals you are
putting in. This is great for comparing the frequency and phase of two
signals.

So, the line you see shows you what the voltage has done over the period of
time set by the timebase control.

Regards,

Peter.

Gosh Tim, "what Aaron Voobner said" weighs heavily on your mind (or what's left of it) lately, eh? OK, pay attention, because here it is from the horse's mouth. For the record, I don't think all 10 meter radios are illegal and certainly have never said or implied this. Without a doubt, the ones on the FCC hit list are illegal to import (even by licensed hams), and they can't legally be used on CB (by hams or CBers). Everyone knows that licensed amateurs can use non-type accepted gear as long as it is used legally on ham bands. Everyone also knows that hams are not the target market for phony "10 meter" roger-beep, echo-miked, rebel flagged radios. Sleazy manufacturers have hijacked the phrase "10 meter radio" in order to attempt to sidestep the CB type-acceptance regulations and get these rigs into the hands of freeloaders like you. So your sudden interest in the technicalities of legal 10 meter radio usage and what I said or didn't say regarding it comes off as nothing less than sheer desperation. You might as well be trying to discredit me on the basis of spelling errors. Waht the hecke, heres a bunch of them for youe; have funn. :
)

Well, "Arron",,let's see why you clipped the rest of the post you quoted...

>Because it was a tantrum where you blame Doug and Leland Scott for all your problems. >>

Mmmmmmph....you're missing posts agin...I have no problems...everything is just right!
What was posted was all true. Lelnad forges and lies and, well, everyone knows all about your posse of trouble consisting of Frank Gilliland, Lelnad KC8LDO the forger and obessive collector of mens undergarments, Dave Hall the socialistic commie, and Dogie who is pissed off cause he can't find any gay cbers.

>It made you look like a certified loony. I figured I did you a favor by snipping it. <

"Figuring" and "thinking" by you should be carefully selected, maybe even ran by a freebander for permission before you post, this way you won't continue to libel your troubled nocode friends anymore.

>Oh well. <

S'ok. As I demonstrated yesterday, you are still in the learning process.

could it be that my answer was in proper context to a fellow freebander and you merely tried but failed to make it look as if I was encouraging one to do so?

>You asked for an example of you encouraging someone to break the rules. So now it doesn't count because it was a "fellow freebander"? <<

I encouraged no one. I merely stated my opinion. We know you have difficulties telling the difference.

>OMG. <

Yes?

>LOL. Twist, you are a precious commodity, you make me laugh so hard.<<

I aim to please.

That pulled yahoo addy has you sore, eh?

>If wishes could come true, huh, Twist? <

If that were true, we would all be weraing the same uniform and Dave Hall would be the exalted dictator with you his ministry of foolishness and Dogie the jester and LElnad the knight that is in drag.

>I've never been pulled. <

You're the one that said you would post from there..we're still waiting. A quick change of the subject didn't make us forget your promise.

>That's because I've never posted anything to be pulled for. Maybe you're thinking of "Special Delivery Jones". Two of his google accounts were pulled for threats.<<

No, I',m speaking of voobner@yahoo.com

And it's the "Twisted Zone", not "Twistedhed".

>More like the "Twilight Zone". But I'm done visiting now. Buh bye. -A<<

Yea, I figured as much, as that usually happens whenever you get your tail slammed in the door.

You lie like a rug, Aanal Aaron. As usual. Or do you call it
"selective recall" so you won't embarass yourself?

Try looking through the excessively long thread about "Legal? ... at
eButt". You said and/or implied many times that ten meter radios were
illegal before you were drowned out by people who knew better. One,
Tom Sevart N2UHC, practically had to hit you over the head by
repeating that licensed amateurs could use any radio they want in the
ham bands, something you vehemently disagreed with.

The entire point of that thread was you crowing that the FCC had
declared all those ten meter radios somehow "illegal", and did you
ever crow. Until you were proven wrong.

You did NOT know that hams were exempt from type acceptance. You did NOT know that Novices and Tech+ license holders had 10 meter priviledges. There are so many things you didn't know that I cannot list them all. Nobody has to try to discredit you; YOU have totally discredited yourself.

But it isn't working, Aanal Aaron. And YOU will be the one that croaks if you continue to smear an innocent person. It's fascinating to watch you squirm and grasp at straws! One professional troublemaker and TROLL (Aanal Aaron) quoting another professional troublemaker and TROLL (Woodbury M. Parr/Radio Bob) as if either knew anything. Har! As Carly Simon once sang, "You're so lame!"

Certainly hasn't and isn't, since you cannot post one iota of PROOF,
Aanal Aaron. You don't have any proof, and repetition is not proof of
anything except your frustration and desperation. Lamer! You think if
you post it enough times I'll go away? Hell no! I want to see your
PROOF, dimbulb. You got none.

Source record: 139478

>Gosh Tim, "what Aaron Voobner said" weighs heavily on your mind (or what's left of it) lately, eh? OK, pay attention, because here it is from the horse's mouth. For the record, I don't think all 10 meter radios are illegal and certainly have never said or implied this. Without a doubt, the ones on the FCC hit list are illegal to import (even by licensed hams), and they can't legally be used on CB (by hams or CBers). Everyone knows that licensed amateurs can use non-type accepted gear as long as it is used legally on ham bands. Everyone also knows that hams are not the target market for phony "10 meter" roger-beep, echo-miked, rebel flagged radios.
<<

There is no such thing as "phony" ten meter radios. Either they are capable of 10 meter or not. Whether they have your favorite noise toys or not doesn't make them any less legal for a hammie, except our troubled pet nocodes, who are the ones doing all the crying over them. Ironic considering you can't even use HF and probably never will.

>Sleazy manufacturers have hijacked the phrase "10 meter radio" in order to attempt to sidestep the CB type-acceptance regulations and get these rigs into the hands of freeloaders like you. <<

Your tactics I would call sleazy, as you have no authority (something that pains you greatly) so it must be replaced with insults. You are doing a bit better since I taught you that an insult-free post carries much more weight than your usual rant. It has also kept you out of the kill-file to a degree. It's taken quite a while, but you have acquired knowledge from us lowly cbers. You have exhibited a conformity to a certain etiquette among these pages, as having your addys pulled for noncompliance pains you almost as much as being ignored.

What you refer to is merely big business savy marketing. When you buy a burger at Burger King, it's not the same vaseline covered-looking burger you see on your TV. Separation of reality from make-believe is possible, but you need to get out more to hone those non-skills you are attempting to learn.

>So your sudden interest in the technicalities of legal 10 meter radio usage and what I said or didn't say regarding it comes off as nothing less than sheer desperation. <<

Ummmm, I would say no. A semi-reasonable and lucid person would call your daily swimming in the archives "sheer desperation". In case you need reminded, your tactic of combing the archives and posting old posts from whoever it is that disagrees with you or shines a light on your

funhouse of hypocrisy is outdated and passe.
You're still impotent.

>You might as well be trying to discredit me on the basis of spelling errors. Waht the hecke, heres a bunch of them for youe; have funn. :
-A <

Not to worry, my tiny cb hating friend....no one ever had to discredit you. You did that all by your lonesome by inventing your imaginary playmate when your reputation was forever trashed as a hammie. Pointing fingers blaming others for their problems and conjuring up imaginary friends are signature symptoms among children who can't cope with reality or who have suffered a great trauma. Don't take my word for it, ask the doc.

Twisteboy wrote:
Better reread your threads and remember who you're replying to......it wasn't me who asked for your call, and it certainly isn't me that "keeps insisting" you prove anything. As far as I'm concerned, you're unbelieveable anyway.

>Gee twistie, you reading comprehension and retention is getting worse. Better reread YOUR threads twistieboy. In your posting of Fri, 4 Oct 2002 22:37:56 -0400 (EDT) in message id of <28700-3D9E5084-134@storefull-2318.public.lawson.webtv.net> you blathered:

Your *behavior* dictates it. You reiterate this hammie stuff of yours overand over so it must mean the world to you that you are indeed recognized as not just a no-code. To us, you are a nocode unless you put forward somethng you asked of us....your call.

>Still say you never asked for my call? Now who's lying? I haven't asked you to prove anything because I know you haven't anything worthy to prove, <<

Last post you asked for my call.
AS I have always maintained, I have never asked anyones call...UNLESS they have asked it of me...ditto with personal information. It's jst like I always maintained, you can dish it out but fail to take your own medicine. You asked, I merely returned YOUR question and apparently took issue with it, going as far as defending your invalid reasons for speaking so much of your hammie status but failing to produce. S'ok, really,,,you know where you reside among us.

>just an appliance cb operator who hides behind his 'handle'. I only ask you for a possible call, name or address after you first asked for my call, before that I never asked you proof of anything.<<

I didn't ask for "proof" merely asked you what you have posed to others. Hypocrisy works well with you. Did Lelnad share the crow? <g>
How about George? Tis funny ya' know....I have this image of your trouble posse sitting around a really small tin table dining on stuffed a-la crow, bibs and all..sorta like the beginning of really great things to come.

>By the way there is no semicolon in wasn't. <

Well, dayummmmmm! Maybe you can gain employment working at home or something...nah, on the other hand.....

See, you don't even rate the curiosity factor with me,

>Really? Boy to be so uninterested you sure keep coming back with the retorts. <<

Missing posts? I explained this before. I am so polite that when one addresses me, I will be so thoughtful as to respond, as long as the person who is attempting the dialogue is semi-skilled with communication. Again, ironic that our small contingency of troubled licensed nocode hammies lack the simple skill of communication. For you, to whom it is ever so important to make the rest of the world aware that you are indeed above nocode status, it isn't the irony that's troubling...it's tragic, as your posts are filled with the same type insults directed toward cbers as comes from the troubled posse "Aaron" named as Lelnad KC8LDO, Dogie N8WWM, Dave Hall-socialistic commie, and Franky Gilliland who doesn't know where he is. Oh yea, and George, who seems a tad younger than his aspirants-to-be-like-us he looks up to.

Yes the local library does but what he is talking about will take a few months to find the parts. Then the assembly and the trick is retuning the coils that should take another month and going to different parts of the book to find out how. If time is money then it is cheaper to have the book as reference by paying for it.

look frankie, some other guy did it for me already. that was convenient

>>>You lie like a rug, Aanal Aaron. As usual. Or do you call it
"selective recall" so you won't embarass yourself?

Try looking through the excessively long thread about "Legal? ... at
eButt". You said and/or implied many times that ten meter radios were
illegal before you were drowned out by people who knew better. One,
Tom Sevart N2UHC, practically had to hit you over the head by
repeating that licensed amateurs could use any radio they want in the
ham bands, something you vehemently disagreed with.

The entire point of that thread was you crowing that the FCC had
declared all those ten meter radios somehow "illegal", and did you
ever crow. Until you were proven wrong.

You did NOT know that hams were exempt from type acceptance. You did
NOT know that Novices and Tech+ license holders had 10 meter
priviledges. There are so many things you didn't know that I cannot
list them all. Nobody has to try to discredit you; YOU have totally
discredited yourself.

--
If you are implying that people, who
hold ham licenses, should be somehow

held to a higher moral standard than
the "common man", then that would
be faulty logic. A ham license is only
a "permit" to use radio, it is not a
"badge of morality".

You seem to be really hung up on this nocode thing, whatsa matter,
you can't pass the nocode test twister? How do you know you have
more fun on the radio than hams? After all, they are operating
legally and don't have to look over their shoulder like you non-cb
illegal operators do.

721. MB8719 and pll info??

Newsgroup: rec.radio.cb
Date: 2002-10-08 18:08:49 UTC
From: AJ Sanderson <sjay@noospam.com>
Message-ID: <anv6v4$vj2$1@slb6.atl.mindspring.net>
Source record: 139499

Seeking some knowledge about the nearly obselete MB8719 and Uniden Grant pll circuitry.... how low can the frequency be taken if the VCO coil is retuned/modified for lower frequencies? The reason I'm asking is because I'd like to use the Grant synthesizer in another application that requires 20 Mhz input (as opposed to the normal 34+ Mhz of the circuit normally). How would such a drop in frequency affect the following components: MB8719, uhic007, TR30 crystal oscillator since the crystal will be changed to 6.7 Mhz, and the low pass filter between TR20 and pin 17 of MB8719?

I realize these questions are pretty technical, but I am going to use just the synth output of this radio in another application and I'm wondering if the modification of frequency is possible.

Thanks,
AJ

Don't celebrate yet, Tim. Steve Rogovich aka Cranium doesn't have the answers, he just stopped by here to troll. If you read the 10 meter thread you see it's nothing more than the same old RRCB circus. Anyone who reads this newsgroup knows the drill by heart. When outlaws are told something is illegal, they immediately begin citing loopholes ("Oh yeah? It ain't illegal if...."). Of course, everyone knows the loopholes don't apply to the outlaw CB'ers. But they hope that a debate about loopholes will take the spolight off outlaw CB.

I'm not suprised. And did you ever consider the possiblity that the picture of the radio was taken IN A BOAT? Or maybe he powered up the radio just for the picture? Oh, that's right, having it connected implies use, therefore in every picture ever taken where the radio is shown powered, the radio must be transmitting. Right, Timmy?

> i better put up a vhf antenna

Hi Jamey, My name is Woody Parr and I'm up the road in Cornelia. I'm
afraid that I'm indirectly responsible for this troll who is
badmouthing you at alt.religion.urantiabook. You see he was only there
in the first place to attack me.

This idiot is Steven J. Rogovich, 1612 Lake Christopher dr. Virginia
Beach, Va. 23464 He followed me to the UB usenet page from
alt.radio.pirate He and I (were) both formerly loosely associated
with each other in the shortwave pirate radio listening hobby. I USED
to be a shortwave pirate but my station has been permanently retired
for more than 2 years now. Stevie is still a pirate and is the
operator of the station Radio Free Speech. He is also the moderator of
a message board at the Free Radio Network < www.frn.net > and goes by
the handle of Pat Murphy there. I had a falling out with the people at
the FRN a couple of years ago as they became corrupt and were doing so
inappropriate things. I dared to open my mouth and openly complain
about there stupid activities which since they havn't yet ceased to
follow me around the internet anywhere they can and attack me.

Steve is also on the usenet trolling people under the name of Richard Cranium (richardcranus@yahoo.com) He's far too much of a coward to debate anyone using his real name.

Hi Jamey, My name is Woody Parr and I'm up the road in Cornelia. I'm
afraid that I'm indirectly responsible for this troll who is
badmouthing you at alt.religion.urantiabook. You see he was only there
in the first place to attack me.

This idiot is Steven J. Rogovich, 1612 Lake Christopher dr. Virginia Beach, Va. 23464 He followed me to the UB usenet page from alt.radio.pirate He and I (were) both formerly loosely associated with each other in the shortwave pirate radio listening hobby. I USED to be a shortwave pirate but my station has been permanently retired for more than 2 years now. Stevie is still a pirate and is the operator of the station Radio Free Speech. He is also the moderator of a message board at the Free Radio Network < www.frn.net > and goes by the handle of Pat Murphy there. I had a falling out with the people at the FRN a couple of years ago as they became corrupt and were doing so inappropriate things. I dared to open my mouth and openly complain about there stupid activities which since they havn't yet ceased to follow me around the internet anywhere they can and attack me.

Steve is also on the usenet trolling people under the name of Richard Cranium (richardcranus@yahoo.com) He's far too much of a coward to debate anyone using his real name.

Can you say "circular argument"? The quote you are using is from Clyde, the same moron that made the claim for which you are defending. I understand that once you latch onto an idea, regardless of the facts, that you just can't let go of it (Seti? You still think I'm N7VCF?). And I also understand that those ideas are never your own, probably because you have never had an independant thought in your life. But for once take a crack at the qualitative reasoning process without someone holding your hand. If that's impossible (and suspect it is), then post a quote by Voobner (not Clyde, Richard Cranium, Randy, or anyone else) where he implies that all 10 meter radios are illegal.

Do you mean this?

"10 meters is a ham band. Calling an "expanded" CB radio a 10 meter radio is a phoney ploy to sell them illegally, hence the term 'phoney 10 meter radios'."

Or this?

"If you're trying to make a case that these phoney 10 meter radios are being widely used as CW rigs by Novices and Tech Pluses, that is unproveable and highly unlikely. And everyone reading this (even the keyclowns) know it."

Or this?

"The law states that phoney 10 meter radios are illegal. There is evidence that they are being used illegally. They will continue to be banned from eBay, and I and others will continue to support enforcement of the law."

I don't see any implication that "all 10 meter radios are illegal", do you?

>--

Not bad, but still amateurish (no pun intended). Luckily foks like Tim and I are able to shed truth on your misinformation.

> If you read the 10 meter thread you see it's nothing more than the same old RRCB circus. <

You're just upset because your presence has disrupted nothing especially those you attempt most.

>Anyone who reads this newsgroup knows the drill by heart.<

Agreed. The terms "Lelnad KC8LDO, Franky Gilliland, Dave Hall, and Dogie Adair N8WWM have become synonymous with trouble or the "drill" as you now refer it.

> When outlaws are told something is illegal, they immediately begin citing loopholes ("Oh yeah?<<

And whenever it is pointed out you lie, you immediately attempt a failed redirect..still waiting on the yahoo post from voobner you promised. Besides, why tell "outlaws" anything when it was your stated intent to reach the "fence sitters"?
Ah never mind, we know why.

> It ain't illegal if...."). Of course, everyone knows the loopholes don't apply to the outlaw CB'ers. But they hope that a debate about loopholes will take the spolight off outlaw CB.
-Aaron-
-
<<

LMAO! There is no spotlight on illegal cb..
But I'll humor ya' ex-"voobner@yahoo.com",....If one does indeed exist, how might one get under this imaginary "spotlight" in order to flaunt what one does to lying problematic nocodes like yourself that refer to cbers who DX as criminals? I'm curious, as my daily DX and usual freebanding for the last twenty- some-years, including the times I have ran wattage, has failed to produce this "light" you speak of.
Same goes for all the members of both DX clubs I belong to. Same goes for the majority of cbers in here. Same goes for the majority of cbers across the US. Same goes for the majority of US cbers who DX, freeband, and run amps. Hahaha...nice try..but there is no "spotlight on illegal cb" coming from anywhere but your imagination, which we know is a bit warped, but nonetheless quite entertaining. As long as someone is watching over you, you won't cut yourself on those scissors you keep trying to poke in your eye.

>the modification of frequency is possible.

The PLL should work fine, but the VCO won't. It wasn't designed for
that kind of range. You could swap components, but you will need to
swap components for just about every other stage as well.

The cheapest way to get a PLL sig-gen is to either buy one or build it
from scratch. The latter isn't hard or expensive. The last page on the
datasheet for the MAX038 has a synth that will go from nearly DC to
over 16 MHz. Just about any parallel-input PLL can be substituted for
the MC145151, and every MAX038 I have tested can go well above 30MHz.

>channels?

...uh... Your SWR knob is to adjust the -meter- to read SWR, it
doesn't adjust the SWR.

You should have a switch that says something like 'Cal' and 'SWR'.
Flip it to 'Cal', key the mic, and adjust the SWR knob for full-scale
on the meter. Unkey and flip the switch back to 'SWR'. Key up and the
meter will show your SWR. Then adjust your antenna for the lowest SWR
on channel 20 and leave it there. If your SWR is below 2 (or 2:1) at
it's lowest, you are doing fine.

Oh wow, wait a minute, you accuse the hams of degrading the cbers
and here you are degrading the nocode ham as only a half a ham.
Boy, you sure talk out of both side of your mouth don't you. A
nocode ham is just as much as a ham as any other license class, at
least he holds a license and can operate legally, something you
can't say. Too bad you can't pass the test.

>
> >How do you know you have more fun on the radio than hams? <<

The hams can operate with a clear conscience that they hold a
license which gives them the privilege to operate on the ham
bands, unlike you who operates illegally, any way you want to spin
it, you are an illegal operator operating in violation of FCC
rules. Does that make you proud? I guess if you can't pass the
test that is the best you can do.

Nice editing Frank, ego getting in the way again?

" "Export" radios and "10 meter" radios are names used to try and slip them
by the FCC. Bottom line is these illegal transceivers are being marketed to
CB'ers not hams, they are not type-accepted for CB, and they are illegal to
sell and use."

I have 3 Pearce Simpson Guardan 23 for sale. All 3 work.
Have 2 power cords and 1 hand mic. They need to be cleaned
up. They have been sitting in the closet for years. I checked
them and they all work, transmit & receive.
Also have 2 mobile brackets.

$75.00 plus shipping.

I bought this radio one year ago. It has only been used by me as a base station, has never been in a car. I had it professionally tuned up. It has Variable PWR from .5 to 8 watts and modulates to around 30. Modulation has been tuned up as well. This is a VERY loud radio and has alot of swing. I still have the Galaxy 55 Box, mounting brackets, power cord, the original stock hand mic, manuals, and whatever else it came with. I have it all. Has the freq counter, large eas to read meter and has Bands A thru F giving you 240 channels. I promise you will not be disappointed with this Galaxy. $170 OBO... Thanks for looking

You are pulling one paragraph out of the context of the post. I knew
you would do that, and that's why I posted the other paragraphs -- to
keep it in context. Also note the phrase "'10 meter' radios" and how
'10 meters' was in quotation marks, IMPLYING that they are not true 10
meter radios. By your logic, you could pull the phrase "these illegal
transceivers" out of context and claim that his implication was that
all cell-phones are illegal. But that wouldn't be any more true than
to claim he implied that "all 10 meter radios are illegal".

Nice try, sharkie. Try again.

See if she or you can figure this one out:

Given: a = b

a^2 = ba , multiply both sides by a

a^2 - b^2 = ba - b^2 , subtract b^2 from both sides

(a + b)(a - b) = b(a - b) , factor

(a + b)(a - b) b(a - b)
-------------- = -------- , divide both sides by (a - b)
(a - b) (a - b)

a + b = b

b + b = b , substitute b for a (since they are equal)

2b = b

2b b
-- = - , divide both sides by b
b b

2 = 1

(And nobody help him out!)

Let's take a look at power supplies and power amps. A 20 amp power supply should supply the full 20 amps at the rated voltage. (I say that because many don't.) So at 13.6 volts it should provide 20 amps, which translates to 272 watts. Ok? Let's drop a couple amps for use by the exciter, so we have about 245 watts left. Now we know that peak AM power requires four times RMS watts. Which means a 20 amp supply is good for 245 / 4 = 61.25 watts deadkey. That's assuming the amp is operating at 100% efficiency; which, of course, ain't gonna happen. So even if the amp is working at a realistic AB P-P efficiency of 50%, if your deadkey is much more than 30 watts you are going to be clipping the supply on the peaks and causing harmonics!

Think about that next time you are trying to match an amp to a power supply!

Since I have a damned good relationship with my boss, I could do as you ask and then quote him for you when he tells me to tell you to "pound sand." The reason that he would tell you this, as anyone with a slight knowledge of law enforcement will tell you, is that we *do not* enforce federal regulations. I have an amplifier mounted in my squad car, and the Chief is fully aware of it. He has more important things to concern himself with than whether sone "ham" is upset because I am using extra wattage on a CB.

Hmm...I wonder if the license for our squad radios would qualify us for this exemption?

A valid point, however, requests for local information and
accident/DUI/reckless driving reports *usually* occur on Channel 19. You
still gotta put some "fire to the wire" around here just to get them to
switch to anothert channel.

Dammit! I have to kick myself for this, but no, it does not. CB radio service is quite clear about this. No matter who, or whom you think you are, external amps are illegal in the CB radio service. Law enforcement is not excluded. You might as well have "extra channels" too. I mean hell, if you're gonna be illegal, why half-step?

Now, the above being said, I don't condone, nor condemn what you do with your CB. I am just providing information. Disregard with impunity what Aaron, Yeti, Dave Hall, Doug Adair(Keyclown Busters) and other's(George doesn't even rate as sane) have to say about legality. Their opinions don't matter in the real world nearly as much as they do in their minds. They are simply radio-cop wannabe's.

I have just recived a Johnson Viking Messenger radio, the guy who gave it to me called it a "Black Face" if that means anything. It apears to be a five channel radio with a permennatly attached mic, i assume its crystal controlled, can you add channels to it or can they be swapped out for other channels?? Also wondering if anyone might happen to have the power hook up pin configuration, it seems to be missing the plug for all that in the back.

By the way, thanks to everyone on the help with the midland cb with the mic problem, i finally got it working, and thanks to everyone for the info on the scope, im learning how to use it, should be a big help,

Thanks Again,
Jason

How about any radio that isn't on the FCC's ban list? There are really quite a few. I don't expect you to know much about them, since you only seem to be interested in the illegal rigs.

I need to see it too. It was your claim, so where's the post? Maybe you can do the same thing you did with Voobner: dig through his posts and find something you can pull out of context in order to support your statement.

Alright, since nobody else seems capable of 1st year algebra:

0.7(3x + 6) = 1.1 - (x - 2)

2.1x + 4.2 = 1.1 - x + 2 (don't forget to distribute the negative sign into the term (x - 2))

2.1x + 4.2 = 3.1 - x

1.1x + 4.2 = 3.1

1.1x = -1.1

x = -1

795. Info needed to ID set of 60's single channel walkie-talkies

Newsgroup: rec.radio.cb
Date: 2002-10-09 07:17:43 UTC
From: Will White <googlyelmo@earthlink.net>
Message-ID: <3DA3D82F.B4BED955@earthlink.net>
Source record: 139673

I just picked up a pair of working and cosmetically very, very fine Sears single-channel 100mW CB walkie talkies for $3.00 at a thrift store. Apart from the nomenclature on the back of the case, which indicates a mgr. date of 1965, it is a 9-Transistor model and "Chassis #787.10001" There is not much to go on in IDing this pair. They do work, on Channel 11, though with slightly distorted and weak audio. Solid metal, black wrinkle finish back and chrome and enamel front and a cute little analog battery indicator (they use, suprise, 9V batteries!), took me 15 minutes to find even one small scratch in the finish of *ONE* of them! Beautiful! And they are SOLID! A good whole pound-plus, each! We
sure made things well and to last once!

I looked through a lot of books and old old catalogs, and this set looks and specs out very, very close to the Hallicrafters CB-11 walkies in the Dachis Hallicrafters book. Principle difference is that the speaker-mic bzel on my pair are circular, inset into a texturized square. But same colors, meter, handstrap, ant., PTT, same number of transistors, RF power, power source, and some more. You think this might be it? My copy (first edition, not the current second edition which has been expanded) of the Dachis Hallicrafters book says, a page or three ahead or after the section on the CB-11, that Hallicrafters did in fact make CB's, including walkies, for Sears, Roebuck, during the late 50's and 60's. The CB-11 dates to 1964, while my Sears units are stamped as being manufactured in 1965. Hmmmmm. . . .

I'd like to find a Rider's or Sam's sheet on these, or some other information that will let me align the pair and make and R&R of parts as

neccesary and still possible avail. wise. Anyone have this, or know who can supply
it, or where I can find it on the web?

I am looking at a nice 1500 watt Linear Amp using 3-500z tubes and a floor stand power supply running 80 through 10 meters. The one on page 13.31 of the 1995 edition.
I find the book to be a great resource book and find my-self going back to it all the time for formulas or projects. Driving to a library every time I needed to look up something would drive me crazier then I already am. You don't need to have one each year but one semi-current, (80s or 90s) would do. I value my time at $23.00 per hr so one trip to the local library and the book is paid for.
If all of the wannibe radio heads on this NG had one book at their disposal then most of the questions and about 1/2 of the posts would not exist.

I don't know of any CB makers that make anything less then 40 CH now. So unless you buy second hand you will get the big 40. If you pay over $250.00 US new for a 40-SSB you are getting ripped-off. I noticed that Cobra has stopped making base CB and so to has Uniden, (I think). So good luck finding them. As for range with an inside antenna don't even bother. 5 miles and you will sound like crap. A car mag-mount on a metal balcony railing will do a little better but still not worth the effort or expense.

I couldn't tell you where to find info on these. You might call around
to some TV repair shops that have been around a while, one of them
might have an original service manual stuck in their file drawers.

What I -can- tell you is that the only thing you will probably need to
do is replace the crystals. By now I'm sure they have drifted well off
freq. If you want to align them anyway, a single channel radio isn't
that hard to tune up. Just use quality tools so you don't crack the
ferrite cores. And don't mess with the output circuit, cause those are

usually matched with the antenna at the factory and they can be a bitch to retune if you screw it up.

They are all "current" -- a radio that could be built in the 1930's
can still be built in 2002. And it will work just about the same.

>If all of the wannibe radio heads on this NG had one book at their disposal

You are assuming that they can read and comprehend the stuff, and also
assuming that they can tear themselves away from the internet's
technical voodoo guru's long enough to read a legitimate book. Then
there is the problem with someone actually reading a book (those
things made with paper and ink) instead of a boob tube.

But then again, if those people didn't exist, I wouldn't have much fun
in this newsgroup ;-)

No one was asking you to *enforce* federal regulations, Len. Yeesh.
You know the difference between "enforcing" and "breaking",
right?...as in "breaking" federal regulations and then publicizing it
in a Usenet newsgroup where everyone can read about it.

> I have an amplifier mounted in my squad car, and the Chief is
> fully aware of it. He has more important things to concern himself with
> than whether sone "ham" is upset because I am using extra wattage
> on a CB.

IMO, maybe he should be concerned when one of his officers is on the
Internet looking for advice on how to modify his contraband Galaxy 99V
with the intention of using it illegally on CB. Or arguing that it is
OK to ignore FCC rules regarding external amplifers.

>
> > (d) Paragraph (c) of this section does not apply if you hold a
> > license in another radio service which allows you to operate an
> > external
> > RF power amplifier.
>
> Hmm...I wonder if the license for our squad radios would qualify
> us for this exemption?

You'd deliberately use your department's FCC license as a smokescreen
to get away with breaking Part 95 CB rules? That would be mucho
dishonest, Len. You know the difference between right and wrong don't
you? Of course you do. Maybe you just got off the track here. Read
through that whole section of Part 95 slowly.

A license in another radio service does not *authorize* use of an external amplifier in the CB Radio Service. It only dis-applies Paragraph (c), which reads:

"The FCC will presume you have used a linear or other external RF power amplifier if--
(1) It is in your possession or on your premises; and
(2) There is other evidence that you have operated your CB station with more power than allowed by CB Rule 10, Sec. 95.410."

Meaning, for example, if an FCC inspector looks over your squad car and finds, for instance, an external linear that is unattached or wired to a radio transmitter which is used in a service where external amps are authorized and for which you hold a valid license, you'll be given a free pass. If he finds the linear attached by coax to the output of a CB radio, it's pretty clear what's it's being used for, and unless he's blind, deaf, and dumb, you'll be found in violation of Part 95 and the amplifier may be confiscated.

As always, don't take my word for it, I'm not an FCC attorney, and neither is anyone else in this CB newsgroup. Instead, do the smart thing. I urge you to look over US CFR Title 47, Part 95. Anyone who reads it will quickly ascertain both the spirit and letter of the law with regards to CB radio. Type-accepted radios used at authorized power levels are required in order to ensure equal access by all users. That's why it was called the "Citizens Band" and not the "Big-Radios-Keying-Over-Small Radios-Band", and that's precisely why the regulations were written. Excuses about crowded channels and lack of vigorous FCC enforcement do not give people the right to ignore the rules. Hope this clears things up.

-Aaron-

I do know that my 1976 hand-book is great but only 1/2 the content of the 1995 book.

The book does start with the basics and work its way up from that so most, (not all) should understand it. I think that most of the guys on this NG would be scared to go into a Ham toy store and find out that their is a real radio world out there.

I do know what you mean about fun but I was and still am a Crappy Bander.

"Yeti",
Which erronious statement, there were several. Starting
with, "A 20 amp power supply should supply the full 20 amps
at the rated voltage.". Most power supplies are ICS rated,
meaning it will deliver the rated current for short periods
of time, not continuously. If you want 20 amps continuously,
get a 25 or 30 amp power supply at least.
Is that enough, or do you want more?
'Doc

From: mrradio@hotbox.com (Sir Circumference)
You seem to be really hung up on this nocode thing, whatsa matter,<<

You're asking the wrong party. You malcontents brought it to my door.

>You didn't have to open it but you did. <

I always open my door when someone knocks. I also answer my telephone. I return phone calls, hold doors open for ladies, and always give blind respect unless something less is hurled my way.

>you can't pass the nocode test twister?<<

If I were entering hammie radio today, I wouldn't give the nocode test a second look. Why be half-a-ham to hang out here?

>Oh wow, wait a minute, you accuse the hams of degrading the cbers and here you are degrading the nocode ham as only a half a ham.<<<

I have never accused the hammies of degrading cbers, only *certain" hammies. You know, the ones that "Arron" mentioned are the ones I refer,,,....Dave Hall, Lelnad KC8LDO, Frank Gilliland, Dogie Adair N8WWM, George Busch...

>Boy, you sure talk out of both side of your mouth don't you.<<

No, actually, "Aaron" named that trouble posse,,,,,take it up with him, but youdid see him for what he is...just get your quotes straight and you'll be fine..

>A nocode ham is just as much as a ham as any other license class,<<

If that were true the same privileges would be extended him.

> at
least he holds a license and can operate legally, something you can't say.<

Sure I can. I can honestly say that each and every time I turn on my radio it experiences what you refer to as "legal use".

>Too bad you can't pass the test.
<

Yea...too bad you're not in the loop and feel I couldn't manage it. Or couldn't. Which was it?

>How do you know you have more fun on the radio than hams? <<

Look at us fun lovin' bunch in here and take it in context to you hammies posts, especially the few nocodes and the trouble posse named by "Arron"...Dave Hall, Lelnad KC8LDO, Frank Gilliland, and George Busch.

>You have fun breaking FCC rules? <<

Reread what I said,,,,now tell us, kind sir,,,what FCC rules am I having fun breaking in here?

>What a strange way of life. <

No stranger than the sociology and history lesson I gave you concerning Santa Cruz that lets you lay claim to the fact that you now know something you didn't before. Admitting you were wrong about something greaty upsets you. Were you raised this way or was this learned behavior you mimed from "Aaron's" announced posse of trouble-causing hammies of Lelnad KC8LDO, Frank Gillland, Dave Hall, N8WWM Dogie Adair? AT least we now know why Hall is so socialistic....look who he chooses to hang with....all nocodes who have attempted to perpetuate their sexual hangups, socialistic and commie ways among a forum of cb loving folks. THAT, is a strange way of life.

>After all, they are operating legally and don't have to look over their shoulder like you non-cb illegal operators do.<<

I operate cb daily. I DX daily. I've done so mostly for over 20 years, give or take a stale period or two. Never have I "looked over my shoulder". No need. What is your implication for such a profound remark?

>The hams can operate with a clear conscience that they hold a license<<

You equate a license with a clear conscience? Hoo-boy! Dave Hall feels it worthy of at least a merit badge, I can see where your mistakes are commonplace and originate. If you lay with dogs, you're bound to stink if you lay there long enough.

>which gives them the privilege to operate on the ham bands, <<

Why does one need a clear conscience to operate on the hammie bands? You're out of line, mister.

>unlike you who operates illegally, any way you want to spin it, you are an illegal operator operating in violation of FCC rules. <<

Yep, DX certainly is in violation of FCC rules. And you can't tell the difference between real life and these cartoon pages, evidenced by you accusing me of breaking FCC rules in this room. Now that takes a real IQ.

>Does that make you proud? I guess if you can't pass the test that is the best you can do.<<

You should listen up and read between the lines more often. Your "guessing", as has been suggested before, achieves the opposite effect of that which you so desire.

I see people are debating things I wrote, taking phrases out of context, reinterpreting them, and then deconstructing the reinterpretations.Holy Cripes, you'd think I was Wittgenstein or something. If Tim had put this kind of effort into his academic studies he could've made something of himself :)
-Aaron-
-
He already did. Tim is such a presence here that he had a direct hand in driving you underground, and he's like, what?.....half or a third your age? From what I see on his webpage, it looks like Tim has had more women and good times than you did your life. Is this the reason you're so encompassed with him? Is he living your dream?
If you look carefully, no one is debating you. They are merely pointing out your errors as usual while laughing at your vanity that stems from your erroneous thinking that you actually put something forward worth debate or consideration.

>As always, don't take my word for it, <

As always, no danger of that by anyone.

>I'm not an FCC attorney, and neither is anyone else in this CB newsgroup. <

There's that "mindreading" gift that Brain pointed out you claimed to have.

>Instead, do the smart thing. <

Killfile you? Nah, it's mucho more fun to watch you lose an addy then try to lie away why it's gone.

>I urge you to look over US CFR Title 47, Part 95. Anyone who reads it will quickly ascertain both the spirit and letter of the law with regards to CB radio. <<

Watch that word "ascertain", Frank took me to task for using it once, but we now see he looked up it's meaning and even managed to somewhat incorporate it into a semi-coherent sentence structure. Rock on, Frank.

>Type-accepted radios used at authorized power levels are required in order to ensure equal access by all users. That's why it was called the "Citizens Band" and not the "Big-Radios-Keying-Over-Small Radios-Band", and that's precisely why the regulations were written. Excuses about crowded channels and lack of vigorous FCC enforcement do not give people the right to ignore the rules. <

These "excuses" you refer to only appear when you go crying and begging for a reason *why* the rest of society doesn't practice your views and behavior instead of exercising their own.
It's because you are in the radical extreme minority and
i-m-p-o-t-e-n-t.

>Hope this clears things up.
-Aaron-<

There was never any doubt. Mr. Stover has informed you quite properly and effectively. As always, you don't like what you're hearing.

From: stryper2000@hotmail.com (Neill Burkett)
what is the least expensive new cb base station i can get that has all
40 channels, also what kind of range can you get w/ one if you use an
inside antenna.
-
Not sure what the exact "least" expensive base is, but you can get a low
cost mobile and power supply probably cheaper than a base and still run
it as a base. Best "bang for the buck" would arguably be the Washington
for a base station.
An inside antenna would suck to the *th degree, depending on what floor
you are on and comparing it to an outside antenna. Any way to disguise
it outside? How about trying a wire or dipole antenna? There is a hammie
or 2 on here that have experience disguising their antennas in order to
get around apartment restrictions...maybe one can offer an alternative
suggestion.

Hello Jason:

That old Black Face Johnson radio was quit the thing back in the 1960's and 70's. Some guys would put on a mic plug on the front or just on the mic cord.

There always semm to mic troubles with these radios. But they where great radios.

S-meters where added sometimes, but usually not.

Then Johnson came out with the white face, I believe it was a 12 channel radio. Yeah if you had a Black Face or a White Face Johnson, and a one tube Shrew linear Amplifier with a 5/8 ground plane you was somebody all right.

I think that they had a Vibrator 12 VDC power supply, that made a buzzing tpye noise, when run off 12 volts. One of the old locals had a old high current battery charger that would run his black face, sounded great, if ya know what I mean.

Here are a few of the great CB radio web sites showing the older neat O CB Radios:

http://www.retrocom.com/index.html
http://members.aol.com/radiokbob/index.htm
http://members.tripod.com/craig328/
http://www.cbgazette.com/gaz2.html

Enjoy, thats a oldie but goodie.

Jay in the Mojave

Message-ID: <jmYo9.822$j83.131133@cletus.bright.net>
Source record: 139602

TWO COMPLAINTS
A man was carrying two babies, one in each arm, while waiting for a train.

Along came this woman, and seeing the two cute babies, started asking the man, "Aren't they cute, what are their names?"

The man gave the lady an angry look and replied, "I don't know.

"The lady asked again, "Which is the boy and which is the girl?"

The man looking angrier than before replied, "I don'tknow."

The woman then started to scold the man, "What kind of a father are you?"

The man replied, "I am not their father, I am just a condom salesman and these are two complaints that I am taking back to my company."

Correct up to here.....
>
> 1.1x + 4.2 = 3.1

The line above is where you made your error.

To get rid of the -x term from the right side you need to
ADD an x term to both sides of the equation.

You added it on the right side and subtracted it on the
left side, which broke the rules.....

That line should have looked like this: 3.1X + 4.2 = 3.1

Subtracting 4.2 from both sides we get:

3.1x = 3.1 - 4.2

3.1x = -1.1

x = -1.1 / 3.1

x = -0.3548387

If you don't believe me, substitute the value of x=-1.1 in
your original equation and solve it.

Then try it with my value of x.

If I make a mistake somewhere, I can't find it, and when I
substitute my derived value for x the equation balances...

I believe your solution below is incorrect.........

>
> 1.1x = -1.1
>
> x = -1

If I use x = -1 in your equation, the results would be that
+2.1 = +4.1, and we know that cannot be correct.

See below:

if x = -1 then 3x = -3

Substituting for x to test validity of answer:

0.7(-3+6) = 1.1 -(-1-2)
0.7(+3) = 1.1 + 1 + 2
+2.1 = +4.1

+2.1 IS NOT EQUAL TO +4.1 , therefore the derived value for
X was NOT correct.

Regards,

Dennis O.

See a doctor quick!

We have a lot of folks dying of that West Nile Virus in
Illinois around where I live!

They had similar symptoms and thought it was just a cold or
the flu.

Regards,

Dennis O.

They're probably just reading the NG and decided to check your site out.
Of course, they haven't checked MY site out yet. Not that it matters,
really. I don't have anything usefull up there yet anyway.

Interesting, indeed. Who knew the fcc was still running IE 5.5?

Hey FCC dude (or dudette)!!! Tell your MIS department to upgrade your
browser. Better yet, tell 'em that Mozilla (http://www.mozilla.org) works
better and you would like that. Viewing illegal amp and freebanding sites
hosted on Geocities and such is more productive with a browser that kills
pop-ups. (That's what you're looking for, right?) You're welcome, FCC
dude (or dudette).

The "Black Face" is the Messenger II, while the "White Face" is the
original Messenger. But the Black Face has ten channels. Other than
that they aren't much different, and crystals for one can be used in
the other. TX crystals are the same freq as the TX freq, and RX
crystals are 455 kHz above TX freq.

The pins on the power socket on the power cord for AC:
Short pin 4 to 5;
Short pin 8 to 9;
AC to pins 3 and 6 thru two 2A fuses.

For DC (12.6V):
Short pin 1 to 2;
Short pin 5 to 7;
Positive to pin 6 thru 9A fuse;
Ground to pin 9.

What about the Radio Shack HTX10? I don't believe it is on the "list" as it
has no "channel"
numbers nor does it beep and squeak or echo. Isn't one or more of those
things what causes
a radio to get on the "bad" list? It may be out of production now, but I
understand it also gave
pseudo-technicians fits trying to modify it. My local Shack had quite a few
HTX10s that were
returned clearly butchered by CB "techs" trying to get it onto 11 Meters.

This also doesn't take into account that many good amps are class AB which
are only about 25% efficient anyway.

Realistically a 20 amp supply will comfortably run a 100 watt radio.

> Whatsamatter? You upset because a CBer is into your "sandbox?"

I don't think THAT many people care what is done on the 40 channels. But if
you use your
CB and amp up on 10 meters without the required license, then you are,
indeed, in "my sandbox".
And if I found that you were operating there, and I have no reason to think
so, I would then forward the info to Mr. Hollingsworth. LEO or no, then you
could find yourself in some difficulty.
That is where the rub is when it comes to hams' objections to Galaxy radios.
Again, I can't care
about what is done down on the 40 IF it doesn't interfere with me. I DO
care about 10 meters, tho. If you think they won't do anything about
unlicensed operators, that is mistaken. Some CBers
have found out that then even go after them on the regular 40--just not all
that many right now.

However, I notice that at least one Amateur has been appointed to the Senate
Committee on
Telecommunications by Billy Tauzin. This might be the beginning of some
changes, and an answer to the 10 Meter intrusion thing.

This is grossly off topic, so move on if you don't want to read my
computer ramblings...

Sure you can disable Java, but then nothing else that uses Java will
work. Also, some authors (such as myself) like to display images and such
in a pop up window. Disabling Javascript would prevent that (and lots of
other neat things like image rollovers). Mozilla can be configured to
only allow USER INITIATED popups (meaning YOU clicked something). Popups
that occur on page-load are killed. It works REALLY well.

Most people disable Javascript to avoid things that web authors do to
piss of their site visitors. The problem is, there is alot of really
usefull and cool things that can be done with Javascript. Why disable it

if you don't need to? Mozilla disables many of the more irritating functions in JS. For example, I hate it when web authors dick with my status bar. I like to see where I'm going before I follow a link, thank you. Mozilla can be configured to prevent sites from changing your status bar.

Better still, Mozilla is 100% standards compliant. Check out their site for a demo. IE is not. Here's one I noticed a little bit ago: IE screws up the colors in PNG graphic files. It doesn't display them accurately. I was going to use PNG's on my site. They looked great in Mozilla, but not in IE. Since most of my visitors use IE, I chose to not use them.

Now and then, some stupid web author designs a site that can ONLY be viewed correctly in IE. I RARELY ever have to use IE, but it happens occasionally. So I always keep IE installed and updated.

Hey, You can skin the user interface of Mozilla, as well.

The radio face, should be black then. In that case it is most likely a Viking Messenger II. If the front is chrome, or bare metal, it is a "white face" Messenger I. I want to think that the white face had five selectable crystal controlled channels while the black face had 10 and a 23 channel VFO. I could be mistaken on that though. You can add and remove channes as you like. Accoding to Dennis #12 (an old Johnson Factory Sevice Tech) you're best bet is to use the regular walkie-talkie type crystals. You do need to fabricate a plug, or extensions to get them to fit however. The Johnson crystals in the big "cans" can be difficult to find, be costly, and tend to be slightly off frequency. You should be pleased after you fabricate something. I use some rebarb wire, which is stiff, soldered it to the leads of the crystal and stuck it in and it sounds fine. As far as the power connector goes, I'm not sure. You can get those radios off E-bay for a decent price. I picked up a working whiteface for $35. You can get a non-working one for cheaper than that, and cannabalize it for parts.

I'm not an expert on this by any means, so the info I gave you may not be 100% accurate. I am however a hobbiest and this is my honest opinion.

Good luck, and enjoy your old Johnson. There is nothing like them.

Hi Jamey, My name is Woody Parr and I'm up the road in Cornelia. I'm
afraid that I'm indirectly responsible for this troll who is
badmouthing you at alt.religion.urantiabook. You see he was only there
in the first place to attack me.

This idiot is Steven J. Rogovich, 1612 Lake Christopher dr. Virginia Beach, Va. 23464 He followed me to the UB usenet page from alt.radio.pirate He and I (were) both formerly loosely associated with each other in the shortwave pirate radio listening hobby. I USED to be a shortwave pirate but my station has been permanently retired for more than 2 years now. Stevie is still a pirate and is the operator of the station Radio Free Speech. He is also the moderator of a message board at the Free Radio Network < www.frn.net > and goes by the handle of Pat Murphy there. I had a falling out with the people at the FRN a couple of years ago as they became corrupt and were doing so inappropriate things. I dared to open my mouth and openly complain about there stupid activities which since they havn't yet ceased to follow me around the internet anywhere they can and attack me.

Steve is also on the usenet trolling people under the name of Richard Cranium (richardcranus@yahoo.com) He's far too much of a coward to debate anyone using his real name.

My apologies for paraphrasing you, Len. Trying to summarize where you stand on this issue is difficult. I've already made my own POV extremely clear, so perhaps it is best that you clarify yours.

-Do you think all CB'ers should use linears, or just cops, and why?
-Do you think FCC CB rules should be ignored or obeyed, and why?
-Do you feel only certain rules should be obeyed? Which ones? How would the FCC enforce selective compliance to CB rules?
-Do you think selective compliance to the CB rules in everybody's best interest?
-If selective compliance is in everybody's best interest, why haven't the CB rules (US CFR Title 47 Part 95) been changed to reflect selective compliance? Should they be?

It's ironic but some time ago I defended police officers in this NG during a discussion about local LEO's ability to enforce FCC regulations viz a viz HR2346 (a House Bill that allows communities to authorize local PD's to enforce FCC CB rules). Quite a few regulars in this NG argued that the average police officer was too dumb (their words not mine) to be able to see the difference between a legal radio setup and an illegal one. I argued that cops are highly adaptable and trainable, as evidenced by mobile computer terminals, radar, drug testing, and other technologies that were successfully introduced to the field.

>Until then, stop trying to put words in my mouth to fit
>your twisted agenda!!!!

Asking you to clarify what you meant isn't "twisted". BTW, the famous "twisted agenda" is owned by Twistedhed, you know, the guy of whom you said:

>Guess it's true...great minds think alike. <g>

For the record, I don't believe all minds should think alike. That would suck. And as far as my "sandbox" goes, I don't own one, and I don't own this newsgroup. I enjoy open discussion with people of all persuasions. I happen to think diversity of opinion is great. That's what America is all about. We certainly couldn't be having this kind of public discussion in Iran.

With this in mind, note that there is a large contingent of regulars in this NG who believe that "bad citizens have more fun", certain laws are only suggestions, and if a crime is victimless, then it is trivial. It's their right to express these opinions, but I happen to disagree with them. Should I be quiet and keep my disagreements to myself? Nope. Freedom of Speech guarantees us both the right to sound off. You are going to hear my thoughts on the subject as well as theirs. This is as it should be, or don't you agree?

-Aaron-

I didn't stop by here to troll, Aanal Aaron, but you LIVE here to troll. And where's the proof you offered to "Gladly" post that I'm somehow Steve? You actually posted the proof that I'm not Steve, but you'll never acknowledge it.

Where are your answers, TROLL?? You ain't got any.

YOU made the statement that "all 10 meter radios are illegal". Prove that they are, Aanal Aaron. You couldn't, you didn't, and you can't now. You are nothing but a low-class, hearsay posting liar and troll, and you proved it yourself.

The 10 meter thread proved that you have no clue whatsoever; you claimed that hams were not excempt from FCC type-acceptance requirements, you claimed that a letter from the FCC to the Customs Service somehow made all ten-meter radios "illegal", and you did not know that Novices and Tech+ license-holders had 10-meter priviledges. You have NO credibility, you never had any credibility, and you will never have any credibility Aanal Aaron.

You don't even hold a license (and if you do you're afraid to post your callsign), so you have no basis for saying anyone is an "outlaw". You are nothing but a moron; the Nit Wit of the Famous Wit Brothers. Everyone is laughing at you and will continue to do so until you wise up and find something else to do with your pathetic life.

This was a stupid reply!

Call Bills 2 Way http://www.bills2way.com/ and ask for a Galaxy DX-2547 Base "CB" or the Texas Ranger TR-696FSSB

These are CB radios and will work good for you.

Dino

They are not "DC amplifiers" they are power converters. In an
amplifier we are concerned with reproducing the input waveform at the
output at either increased amplitude and or power. Power converters on
the other hand use everything from sine waves, square waves etc. to do
the power conversion, and don't have an input waveform to amplify. For
example the inverters I was commenting about above, they use a square
wave of voltage while the current is a sine wave!

If the drive amplitude switches between +V and -V there is NO DC
component. This is no different than a sine wave switching between

+169.71 volts and -169.71 volts, i.e. 169.71 = 120 * sqrt(2). Put a DC voltmeter across the 120 volt line in your house it should read zero. It will read zero across a square wave with the same voltage values too.

Unless I "AC couple" the stage. 8-))

> When you
> change the duty cycle, you change the AVERAGE DC of the square wave!
> That's how switching power supplies work! Don't tell me you didn't
> know that....

Once you start switching it, DC, around its no longer just DC. That's how those neat little power converters work. Takes 12 VDC input, and generates 120 volts rms AC output. If you get any significant amount of DC out of one of those you may end up wrecking the appliance connected to it. Particularity the ones with a transformer input!

If you change the duty cycle of a square wave it is no longer a square wave. In fact high performance so called "servo amplifiers", and they are NOT technically amplifiers either, operate by varying the duty cycle of a high frequency square wave. As long as the duty cycle is exactly 50 percent, where the waveform switches between +V and -V supplies, the DC component is zero. By varying the duty cycle one way or the other you can generate a net positive or negative DC component to form in the spectrum of the resulting waveform. Using the huge inductance of the DC motor armature winding as a crude low pass filter the only component that remains is the DC one. This causes the motor to spin one way or the other depending on the net DC component.

In variable AC motor drives a set of electronic switches are driven in such a manner that the resulting rectangular waveform has a lower frequency AC component after filtering. No DC component is generated because the duty cycled is varied in a sinusoidal manner about the zero line. By using three sets of such switches, where the phase angle between the sinusoidal modulation of the duty cycle is 120 degrees, you can generate 3 phase power at a variable frequency and voltage level. Coupling the above outputs to a 3 phase induction motor allows one to change it's speed by changing the modulation frequency (thus

effective line voltage frequency), and voltage thus motor torque, by
adjusting the modulation "depth". Changing direction only requires
reversing the phase angle of two of the outputs.

> only a power equation for a sine wave.

True. However all of the equations for reactance, power etc have been
developed for a sine waveform. It turns out sine waves are very easy
to use for AC circuit analysis. Through the use of the Fourier
transform a signal can be analyzed using the techniques for sine wave
analysis except one has to apply it to every harmonic term present in
the NON-sinusoidal waveform. This is the basis of all non-sinusoidal
signal analysis used in circuit design work. It also makes the math
rather messy except for some well define non-sinusoidal waveforms,
where the terms can be represent as an infinite sumation series, and
the coefficients are a simple function of the order of the term. For
the general case the analysis is done typically by computer, which can
easily handle the 100's of terms required to get accurate results.

> That's what mine say as well. Why should they differ on Class A
> efficiency?

I think it depends on just what kind of amplifier they analyze. For an amplifier with a purely resistive load (at all times and the simplest case to work with) only for the signal component. I have assumed a resistive load at all times. Consider for a minute an amplifier using a "tuned", i.e. a parallel circuit of a capacitor, inductor, and resistor load. It should be apparent that at no signal condition the DC bias power wasted in the load should be near zero, unlike the purely resistive load case, since the load is shorted out by the normally much lower in resistance inductor. For this case the DC load line does not match the AC load line. That makes the efficency analysis more "interesting" and likely different.

When getting in to discussions like this it is VERY important that everybody fully understands the exact circuit typography in question.

>My apologies for paraphrasing you, Len. Trying to summarize where you stand on this issue is difficult.
<<

Which is why you fail at it so often. It's not up to you to "summarize" where another stands on any issue. You are usually way off the mark, such as you are here.

> I've already made my own POV extremely clear, so perhaps it is best that you clarify yours.
<<

Why should he clarify anything? Just because you don't like his answers? You're the only one having a comprehension problem with this fella, in case you haven't noticed.

>-Do you think all CB'ers should use linears, or just cops, and why? -Do you think FCC CB rules should be ignored or obeyed, and why? -Do you feel only certain rules should be obeyed? Which ones? How would the FCC enforce selective compliance to CB rules? -Do you think selective compliance to the CB rules in everybody's best interest? <<

Certainly. The FCC reiterates this stance with only selective enforcement.

>-If selective compliance is in everybody's best interest, why haven't the CB rules (US CFR Title 47 Part 95) been changed to reflect selective compliance? <<

"Cause the feds rarely admit wrongdoings, no matter how trivial.

>Should they be? <

Nah, the laws are just fine the way they are, the squeaky wheel gets the grease and some of the hammies are loud.

>It's ironic but some time ago I defended police officers in this NG during a discussion about local LEO's ability to enforce FCC regulations viz a viz HR2346 (a House Bill that allows communities to authorize local PD's to enforce FCC CB rules). Quite a few regulars in this NG argued that the average police officer was too dumb (their words not mine) to be able to see the difference between a legal radio setup and an illegal one. I argued that cops are highly adaptable and trainable, as evidenced by mobile computer terminals, radar, drug testing, and other technologies that were successfully introduced to the field.
<<

Not quite. I have claimed in the past that MOST cops couldn't care any less concerning cb infractions. I was right then and I'm right now.

-Until then, stop trying to put words in my mouth to fit your twisted agenda!!!! -

>Asking you to clarify what you meant isn't "twisted". <<

But you didn't ask, you ASSumed and put it forward as fact, when in fact it was bullshit what you attributed to him.

>BTW, the famous "twisted agenda" is owned by Twistedhed, you know, the guy of whom you said: <

-Guess it's true...great minds think alike. <g>

>For the record, I don't believe all minds should think alike.<

Neither do I, but I think "great" minds tend to parallel each other in several ways. The irony of the above line written by you apparently was also lost on you as well.

> That would suck. <

Even when it comes to selective enforcement? Or should we all blindly go and adhere strictly to the letter of the law, ...as Dave Hall has claimed..a rulebreaker is a lawbreaker is a criminal, eh? Throw that woman in Wichita in the state pen for hanging her laundry on a Sunday outdoors too close to a church...no matter the law is no good,,,,it;s there...*we-must-follow-law".

>And as far as my "sandbox" goes, I don't own one, and I don't own this newsgroup. I enjoy open discussion with people of all persuasions. I happen to think diversity of opinion is great.
<

You also happen to think diversified email addys to post with are great. You also are a hypocrite, as you feel it is ok to break your ISP agreements and TOS agreements with the internet, hence you losing the voobner@yahoo addy. You practice selective compliance all the time, but need someone subjective enough to point it out.

>That's what America is all about. <

So now America is what some tight azzed underground nocode claims it is? Yuh, that's brilliant.

>We certainly couldn't be having this kind of public discussion in Iran.
<

Another attempted but failed redirect for being admonished by a newbie, no less, for putting words in anothers mouth.....tsk tsk! He pegged you immediately, junior!

>With this in mind, note that there is a large contingent of regulars in this NG who believe that "bad citizens have more fun", <<

Underground Arron took it upon himself to try some failed propaganda by inserting "large contingency" of regs because of one (1) who used that as a sig busts him out on a regular basis. He's just taking a pot shot at him here.

>certain laws are only suggestions, and if a crime is victimless, then it is trivial. It's their right to express these opinions, but I happen to disagree with them. Should I be quiet and keep my disagreements to myself? Nope. <<

We don't want you to go anywhere Aaron. We enjoy having you as the group's jester.
You brighten my day.

>Freedom of Speech guarantees us both the right to sound off. You are going to hear my thoughts on the subject as well as theirs. This is as it should be, or don't you agree?
-Aaron-<<

Oh, absolutely, but why is it when someone gives an opinion that disagrees with yours, you threaten to see "How their boss would feel?" Never mind, we know the answer to that.
Go clean yourself off.

I'm not sure, but I think this is a trick problem because:

If a = b, then a-b would equal ZERO, and you cannot divide
anything by ZERO and expect to get a valid result.

This same guy has written an EXCELLENT essay. Check it out:

http://wb0nni.dakotamade.com/whyham.html

"WHY HAM RADIO?

To start with, it might be helpful to state that this is not a critique of CB Radio. Despite what you may have read or heard, the Citizens Radio Service was created by the FCC to permit the average Joe an opportunity to use two-way radio to conduct personal and business communication over relatively short distances. If that's all you want to do with it, than CB will likely be the ticket for you.

Personally, I toyed with a CB walkie-talkie in my teens only long enough to begin worrying whether the knock on the door was the FCC coming to take me away. For me, radio was something I wanted to learn about - that I wanted to get inside of and tinker with. I wanted to fool with dreaded electro-magnetic waves and see what I could do with them. I knew that just turning knobs and talking into a microphone would never cut it. So, fearful of what my mother would say when the FCC showed up at the door, I gave the CB walkie-talkie away. It wasn't until several years later that I rediscovered radio and was fortunate enough to be drawn in the right direction.

One of the things that appealed to me when I began seriously looking at radio was the ability to communicate with radio operators world-wide. The thought of talking to another radio operator in Asia, for example, appealed to me - as did the possibility of receiving written confirmation of the contact. The problem I had with CB at the time, was that more than one of the operators I visited lied to the guy on the other end of the radio about where they were located. They joked about it afterward, which made me wonder whether CB was for me. When I finally had a chance to meet some hams, the experience was altogether different.

These were people that strictly operated on the right side of the law - in every aspect of their lives. That seemed important to me. Not only did they understand radio theory, but were able to use their knowledge to benefit the community at large. Many had been ship board operators, others were volunteer dispatchers and licensed radio

technicians. Still others had been radio operators in the service - one of which had served as a code breaker in the Army during WWII. When I thought about the kind of people that I would prefer to communicate with world-wide, it was this group that I settled on.

This is not to say that there aren't bad hams - there are! However, those that misrepresent themselves and violate not only FCC regulations, but the bonds of common courtesy, don't last long. Ham radio is something that gets into your blood and has enough facets to keep you going for a life time. After you've worked all States, you might decide to fool with antenna designs. And then there's the tinkering part - actually getting inside and making things better (or ocassionally worse). There is experimentation - working other stations by bouncing your signal off the moon. And, finally, when you get ready to seriously pursue DX, erect a tower and beam and assemble an amplifier, you'll never have to fear that the knock on the door is anyone other than the postman with another load of QSL cards from overseas.

Best 73s - Bob WB0NNI"

No one in his right mind would run a class C amplifier for anything other than fm, cw, or frequency shift keying. They are NOT linear and can cause a lot of problems. Class ab will give you up to 60%; class B can get up to perhaps 65% in normal use. Class C can easily go WAY over 70% efficiency. Switchmode amps (square wave output) run over 90%.

Is that the "modified sine wave" that comes from an APC?

878. FS: Rohn 25 Package Deal!

Cross-posted to: alt.ham-radio.marketplace,rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.cb,rec.radio.swap

I have 60 feet of Rohn 25 available in North Jersey. This is a package deal which includes:

One top section with rotor plate and guy brackets
Five regular sections
One short roof mount base with foot plates
One ground mount base plate
One house bracket
And, Three philystran guy cables with attached hardware.

This is pickup only as I no longer have a truck to transport it in.

I will take $350 for the whole package or possibly trade for something of equal value.

73, de Rich

I don't hate CBers at all, and until I learned of the sneaky birds on
28.085, I didn't say anything.
I only got involved after that. Hehe, you'll notice (in my defense) that I
rarely comment on other
matters (amps, etc) Hey, I've been pretty quiet lately just a-readin' the
mail, as it were. I only get
"irate" when that 10 Meter thing comes up. LOL! I don't get too upset over
what happens down
on the 40; after all, if it isn't bothering me, why should I get involved?
It is for the Feds to decide.
When I find someone else's cows in my pasture, I grab my "broom" and go shoo
'em out! LOL
Once in awhile, you'll notice I WILL make a corny joke. <<G>>

Well, you lost me there. How in the heck to they get square voltage
with sine current on the same line? Are we talking an anti-sine load
or something?

That depends if the area under the curve is equal above ground as it
is below ground. If not, then it has a DC component. A Class A amp,
therefore, has a DC component -- even if it's a square wave -- because
there is no circumstance where a Class A amplifier is going to swing
below ground (well, except maybe with an inductive load, but that's a
different story altogether...)

> This is no different than a sine wave switching between

Not if it's coming off a Class A amplifier.

>connected to it. Particularity the ones with a transformer input!

I did miss your statement earlier about power 'inverters', but again it depends on the method of inversion. A transformer powered from a Class A amp must dissipate the DC power as heat. If the method is cap/diode multiplication, you should be able to get all the power to the load (ideally). Same with inductive backwash inverters.

But if all you are doing is filtering the square wave for DC output, then the amp is just a DC amplifier.

>If you change the duty cycle of a square wave it is no longer a square
>wave.

Hmmm...

> In fact high performance so called "servo amplifiers", and they
>are NOT technically amplifiers either, operate by varying the duty
>cycle of a high frequency square wave.

Since the duty cycle of a square wave can be changed, then they are no longer square waves, are they?

> As long as the duty cycle is
>exactly 50 percent, where the waveform switches between +V and -V
>supplies, the DC component is zero. By varying the duty cycle one way
>or the other you can generate a net positive or negative DC component

>inductance of the DC motor armature winding as a crude low pass filter
>the only component that remains is the DC one. This causes the motor
>to spin one way or the other depending on the net DC component.

Whoa, hold on there! Duty cycle is only partly responsible for the DC component of a square wave. You can have a square wave that hovers between +10 and +20 volts DC and if the duty cycle is 50% then the DC component is +15 volts DC. So if a Class A amp puts out a square wave from zero to Vcc with a 50% duty cycle, then the DC component of the output will be Vcc/2.

>In variable AC motor drives a set of electronic switches are driven in
>such a manner that the resulting rectangular waveform has a lower
>frequency AC component after filtering. No DC component is generated
>because the duty cycled is varied in a sinusoidal manner about the
>zero line.

What you are doing there is not changing the duty cycle of a square (or rectangular) wave, you are pulsing alternate and equal positive and negative potentials with equal pusle widths. That requires a pulse-width modulator, and is not the same as varying the duty cycle of a square wave. Actually, the operation is more like the triac control in a light dimmer, except the gate is replaced by your motor-driven switches (but not always).

> By using three sets of such switches, where the phase angle
>between the sinusoidal modulation of the duty cycle is 120 degrees,

SAA except for a three-phase application.

My math sucks lately so I won't go there. But when the signal is the theoretical square wave then Vpeak = Vrms, and under no circumstances can Vrms of a symmetrical waveform exceed Vpeak. Which is why max efficiency for a Class A amp can only be achieved with a square wave.

That depends on the DC resistance of the circuit. It's not necessarily "near zero", and many tanks have resistance added in order to lower the Q of the circuit. Case in point: grid swamping resistors.

> unlike the
>purely resistive load case, since the load is shorted out by the

>analysis more "interesting" and likely different.

True story. However, when the DC resistance IS negligible, the DC resistance of the active device becomes the current-limiting factor, and therefore the primary means of DC power dissipation.

>When getting in to discussions like this it is VERY important that
>everybody fully understands the exact circuit typography in question.

Agreed.

That's bullshit, Timmy. It's Cranium's claim that that Voobner said "all 10 meter radios are illegal" (notice the quotes), and that has been the rally-cry of his whining campain against Voobner for the past couple months. But I can't find any post where Voobner said such a thing. Can you? If you can, post it. If you can't then quit backing up Cranium's lies.

I misunderstood your non-answer, and for that I apologize. I'll rephrase my question: Who claims that a ham license is a "badge of morality"?

I guess I have to simplify it even further so you can understand the
question:

Q: Who (what person or persons) believe(s) that an amateur radio license is equivalent to a "badge of morality"?

Now was that simple enough? Or are you going to pull a Twistedhed and act like you didn't understand the question for the third time?

Hi Dennis,

You know, the fact that these companies were started by people that
had
ham licenses should not be all that surprising.

Before the age of computers, people played with RF as their "high
tech"
outlet. Those that were in the position to "know RF", also tended to
have ham licenses, as a ham license was the ticket to play in the RF
sandbox, as it were, for those who were technically inclined. Once
apon
a time, Ham Radio was THE high tech hobby. Today, of course, this is
no
longer true.

If you are implying that people, who hold ham licenses, should be
somehow held to a higher moral standard than the "common man", then
that
would be faulty logic. A ham license is only a "permit" to use radio,
it
is not a "badge of morality".

I truly believe that "every man has his price", and even though what
these supposed hams did was legal, at the time, they were corrupted
by
the lure of making big money, from hordes of CBers who had little
reservations about breaking the law, and were more than willing to
spend
their hard earned cash on anything that glowed in the dark, and made
their signal stronger.

Perhaps many of these "hams" tried to comfort their own conciences by
telling themselves that they, themselves, were not the ones operating
illegally, and that it's ultimately the end user's responsibility to
abide by the law, and in fact, until the tighter regulations on the
manufacture of amplifiers were enacted, this was pretty much a
legitimate claim.

Today, there's no getting around it. If you make an amp that works on
11
meters, without extensive modifications, it's illegal. This bothers
some
people, and make little to no difference to others. I guess it all
depends on your "price".

Dave
"Sandbagger"

It looks like you are making a hobby out of misrepresentation. You go
right ahead, sharkie, and whenever you misquote someone in that manner
I'll be there to provide the context that you selectively omit.

The answer is that I never used the phrase "badge of morality" to
describe a ham license. That term came about as a twisted paraphrase of

an interpreted meaning, from a party who's a few fries short of a complete happy meal upstairs, and an associated meaning that I never attempted to convey.

A ham license is a permit to operate ham radio. It is also a testament that the holder passed certain tests, and therefore has a certain degree of understanding of radio principles and operating rules and regulations. It is also further implied that the holder will abide by those rules as set forth by the FCC, and apply good engineering practice when building and modifying any gear or accessories that would be commonly used in a ham station.

Since one must apply a certain amount of effort to obtain a ham license (The degree of effort depends on your aptitude in radio), there is a certain amount of value associated with it, from those who hold similar licenses, and a further amount of respect from others who have also worked to achieve something, and recognize the dedication and resolve to accomplish a set goal.

There are a few malcontents, on this newsgroup, that have no respect for a ham license or for the effort and accomplishment that is involved. Considering that these same people have no respect for radio rules at all, or any societal law that they also do not agree with, it should be no surprise. Much of this disassociation with goals and accomplishments, says volumes about their own ineptitude at accomplishing anything truly significant in their own lives. It's much easier to denigrate anothers' accomplishments, than to come to terms with your own failures.

There is a word that describes these people, and their associated behavior: Sociopath.

What the Heck are you talking about? "misquote" I took an
entire paragraph, not one sentences or a word, so that was by
no means a "misquote" Again, your ego is getting in the way
of you're vision. I guess if I pull up that post you made offering
to build an amp for someone on the cb, I would be taking that out of
context? Right?
Boy you sure are arguing a lot over nothing, Gheesh.
Almost just for the sake of arguing.

Landshark

Well Dave I never said that just because one holds a
ticket doesn't mean that either. But you did type it and I thought
it was very well said. Just because one holds a license doesn't give you the
right to harass others on what they are doing on

other bands that you don't even operate on. Nor does it give
you the red badge of courage to think that anyone that
operates, talks, uses, owns amps, export radios is an immoral
corrupt person, as some out here would like you to believe.

Landshark

PS, this was not meant to be directed at you, it is towards
those who act like that, you have not.

This is true! But much of the energy is producing noise and heat and not
any useful signal.

Still, a 20 amp regulated power supply will handle a 100 watt radio.

Wow! I actually did make that comment, (not that I can remember every exchange I've made on here for the last 8 or 9 years) but from the context of the quote, it is plainly obvious that this happened at the time when there were people on here that accused some of us of believing that the ham ticket was somehow a "badge of morality", simply because we understand the responsibilities that go along with the privileges granted.

I also find it amusing, and if I weren't somewhat humble, a significant boost to my ego, that so many people have taken to using some of my passages as quotes. I guess despite so many protests to the contrary, maybe the truth isn't so hard to ignore......

What's that old saying about imitation being the highest form of flattery?

Harrass, no. Express an objective opinion, yes. And as far as operating on bands not under the privileges of a ham license, it should be fairly evident that many hams are also CBers, and share a concern about the direction with which the band is heading.
It might be easy to think that once hams "upgrade" that they need not concern themselves with CB any more, but I can assure you that this is often not the case. Otherwise, why waste time here?

> Nor does it give
> you the red badge of courage to think that anyone that
> operates, talks, uses, owns amps, export radios is an immoral

Some people would say the same thing about drug dealers, or pimps, or any other "vice" crime. Whether or not you consider the law serious enough to follow is a choice you make. But breaking the law invites you to enter the fine institution of the criminal justice system.

License or not, if you break the law, you are technically a criminal. While many would seek to trivilize certain laws such as traffic laws, or radio regulations, the logic of it is still valid. If being tagged as a lawbreaker, makes no difference in how you perceive yourself in the grand scheme of things, then fine. Otherwise, when people spin, fight, twist, and attempt to justify the various reasons why they should not be looked at as criminals, that tells me that deep down inside, it does bother them to some degree, and these spin tactics are done to appease their own consciences, and to a lesser extent, an attempt to soften their image in the eyes of other people. People who deliberately disobey rules and regulations, do have questionable moral standards. Otherwise they would follow the rules. For those who have deep convictions that certain rules are inherently wrong and should be changed, they have a constitutional process, that can be followed to have the laws changed. Mearly breaking them in some sort of "protest" earns no respect, but making the effort to accomplish your goal will earn tremendous respect. But that effort is way too hard for most of these individuals. They want everything easy. That's why they operate CB illegally, and don't have ham licenses OR take the steps to have the laws changed.

The answer is that I never used the phrase "badge of morality" to describe a ham license. That term came about as a twisted paraphrase of an interpreted meaning, from a party who's a few fries short of a complete happy meal upstairs, and an associated meaning that I never attempted to convey.
A ham license is a permit to operate ham radio. It is also a testament that the holder passed certain tests, and therefore has a certain degree of understanding of radio principles and operating rules and regulations. It is also further implied that the holder will abide by those rules as set forth by the FCC, and apply good engineering practice when building and modifying any gear or accessories that would be commonly used in a ham station.
Since one must apply a certain amount of effort to obtain a ham license (The degree of effort depends on your aptitude in radio), there is a certain amount of value associated with it, from those who hold similar licenses, <

You were ok until here. Plenty of upper classman feel the nocode tech entry level was a sever "dumbing down" of amateur radio and has contributed to the trash to be found on hammie bands. If you wish my opinion, ask it, but these are the facts.

>and a further amount of respect from others who have also worked to achieve something, and recognize the dedication and resolve to accomplish a set goal.<

Here we go again.
To many, the nocode license is no accomplishent, Dave. It's a way to get wet without actually swimming. The sense of accomplishment one feels over an individual achievement varies. I think it's funny as hell it galls you to no end that you don't automatically get the respect you seem to think is entitled you due to you holding a license......no matter what class you hold, it does not ENTITLE you to respect. This is something you and your cohorts named by "Arron" have never learned and it is a very valuable piece of life advice....respect is earned, not demanded.

>There are a few malcontents, on this newsgroup, that have no respect for a ham license or for the effort and accomplishment that is involved. Considering that these same people have no respect for radio rules at all, <<

You couldn't name 2, let alone a "few" that fits that bullshit you're slinging.

>or any societal law that they also do not agree with, it should be no surprise. Much of this disassociation with goals and accomplishments, says volumes about their own ineptitude at accomplishing anything truly significant in their own lives. <<

And it really says something about one who has no good in their life and can only achieve it by admittedly upsetting another. Or insulting them. But good for you, Dave, because since I have been on you about staying pertinent and pointing out your insult after non-deserved insult in so many of your old posts, I must admit, you have been watching yourself, and with a moderate degree of success. Congratulations. Now work on the admitted pleasure you derive from making others upset and you will be an honorary human again. Don't give up the fight.

>It's much easier to denigrate anothers' accomplishments, than to come to terms with your own failures.
<<

Yea, that has been your history here.

>There is a word that describes these people, and their associated behavior: Sociopath.
Dave
"Sandbagger"<<

And one that describes you and the other angels named by "aaron" as his posse of hate ....socialists.

Sorry,here's the page link:
http://wb0nni.dakotamade.com/rfamp2a.html

This same guy has written an EXCELLENT essay. Check it out:
--
It would have been better posted in a hammie forum, but since you posted here, let's commence and shred the bullshit as it applies to cb, shall we?

>http://wb0nni.dakotamade.com/whyham.html
"WHY HAM RADIO?
To start with, it might be helpful to state that this is not a critique of CB Radio. Despite what you may have read or heard, the Citizens Radio Service was created by the FCC to permit the average Joe an opportunity to use two-way radio to conduct personal and business communication over relatively short distances. If that's all you want to do with it, than CB will likely be the ticket for you.
Personally, I toyed with a CB walkie-talkie in my teens only long enough to begin worrying whether the knock on the door was the FCC coming to take me away. <

For toying with a cb walkie-talkie? Were you f'n with the cops?
Emergency freqs?
C'mon, now.

>For me, radio was something I wanted to learn about - that I wanted to get inside of and tinker with. I wanted to fool with dreaded electro-magnetic waves and see what I could do with them. I knew that just turning knobs and talking into a microphone would never cut it. So, fearful of what my mother would say when the FCC showed up at the door, I gave the CB walkie-talkie away. <

Aw, go on.

>It wasn't until several years later that I rediscovered radio and was fortunate enough to be drawn in the right direction.<

As opposed to WHAT? The "wrong" direction?
Can't say this post wasn't biased from jump.

>One of the things that appealed to me when I began seriously looking at radio was the ability to communicate with radio operators world-wide. The thought of talking to another radio operator in Asia, for example, appealed to me - as did the possibility of receiving written

confirmation of the contact. The problem I had with CB at the time, was that more than one of the operators I visited lied to the guy on the other end of the radio about where they were located. <<

If you're receiveing written confirmation of the contact, then tell me how they managed that Slovenia stamp and PO cancel from...oh, say Ohio? <g>

>They joked about it afterward, which made me wonder whether CB was for me. <<

Correct. Those with no sense of humor, proceed directly to hammie radio, do not stop at cb.

>When I finally had a chance to meet some hams, the experience was altogether different.
These were people that strictly operated on the right side of the law<

Again, I ask you, as opposed to WHAT?
The WRONG side of the law?

>- in every aspect of their lives. That seemed important to me. Not only did they understand radio theory, but were able to use their knowledge to benefit the community at large. Many had been ship board operators, others were volunteer dispatchers and licensed radio technicians. Still others had been radio operators in the service - one of which had served as a code breaker in the Army during WWII. When I thought about the kind of people that I would prefer to communicate with world-wide, it was this group that I settled on.
<<

That's great, but it doesn't merit your obvious slant. Paranoia did that stemming from a childhood walkie-talkie. (Voices...I hear voices)

>This is not to say that there aren't bad hams - there are! However, those that misrepresent themselves and violate not only FCC regulations, but the bonds of common courtesy, don't last long. <<

Doesn't this go both ways? Do you not feel these hammies that violate FCC law break all other laws, as you seem to believe that since a hammie claims he obeys the FCC, he must be honest when he tells you he obeys all other laws.

>Ham radio is something that gets into your blood <<

Or under your skin, thanks to the likes of "Aaros' named hate crew of KC8LDO Lelnad, N8WWM Dogie Adair,
Frank Gilliland, and Dave Hall.

>and has enough facets to keep you going for a life time. After you've worked all States, you might decide to fool with antenna designs. <<

Or do it again with less power. Or in other modes. Or try every year to get all 50. I know it's been done on eleven a whole bucnha times this

cycle.

>And then there's the tinkering part - actually getting inside and making things better (or ocassionally worse). There is experimentation - working other stations by bouncing your signal off the moon. And, finally, when you get ready to seriously pursue DX, erect a tower and beam and assemble an amplifier, you'll never have to fear that the knock on the door is anyone other than the postman with another load of QSL cards from overseas.
Best 73s - Bob WB0NNI"<<

Thing is, there is a common misconception among our resident pissed off hammies that such a fear exists among cbers. It doesn't, but I can appreciate the fact that so many hammies seem desperate, even exasperated to spread this bullshit. Listen to 27.555 any day of the week, any time of day, and tell me these guys seem the slightest bit "fearful". No, it's more of the same,,,always coming from a hammie that "cbers are fearful". The gist of his message was anticb, originating from one of the hammie four we would expect it most.

Correct, again same argument. Speeding, jay walking all are laws that
are broken everyday by thousands of people, are those people that have
admitted to those crimes harassed to no end by people? Hell look at
littering, it carries a fine in some states as high as $2,000.00
dollars, has it stopped people? No. Here's another one thatï¿½s a killer,
copy a video tape, CD, DvD the fines are as much as $250,000.00, and
people do it all the time, so where's the throngs of posse members
doing to them, what others are doing here?

> License or not, if you break the law, you are technically a criminal.

OK, thatï¿½s fine, but to brand your mother a criminal for copying a movie,
then giving it to others to view, why? Does that make her any less of a
mother to you? Does she now look like a "hardcore" thug now? No, of
course not.

Well, thatï¿½s your opinion and what you believe in, good for you. I for
one think just because someone uses an amp, export radio, freebands,

isn't an immoral person anymore than again, someone that copies videotapes or litters. If you do those things, you take a chance and with that chance is a possibility of getting caught and fined.
Well this has been fun, but I'm not going to sit here all day like others, have a good one.....

Landshark

Source record: 139700

>Imagine my surprise when I realized that I DID make that comment. But I agree with myself nonetheless. ;) <

You're easily entertained, Dave. Google can surprise you all day, if you want. Oh, Fraaaaaank.....

"Just because one holds a license doesn't give you the right to harass others on what they are doing on other bands that you don't even operate on."

>Harrass, no. Express an objective opinion, yes.<

Bullshit. Your license gives your opinion no more validity than anyone elses.

> And as far as operating on bands not under the privileges of a ham license, it should be fairly evident that many hams are also CBers, and share a concern about the direction with which the band is heading. <

Well, there is some logic.

>It might be easy to think that once hams "upgrade" that they need not concern themselves with CB any more, but I can assure you that this is often not the case. <

Wrong, Whatever problem you have with cb is personal. In fact, the majority of hammies do not share the hard on the-anti-4 have for cb.

>Otherwise, why waste time here?<

You answered your own question...you derive pleasure from making another upset.

"Nor does it give
you the red badge of courage to think that anyone that operates, talks, uses, owns amps, export radios is an immoral corrupt person, as some out here would like you to believe. "

>Some people would say the same thing about drug dealers, or pimps, or any other "vice" crime. <

Nah, only you hatemongers. Lelnad
says freebanders should be shot in the head, you call anyone who doesn't agree with a law a criminal, and here you are reeeeeeeeally reaching.....

>Whether or not you consider the law serious enough to follow is a choice you make. But breaking the law invites you to enter the fine institution of the criminal justice system. <

Such as going 56 in a 55 MPH zone, I know, you already said as much.

>License or not, if you break the law, you are technically a criminal.<

And here is where your radical minority view manifests.
You speak of "society" quite often, but know not what the majority believe. It is quite apparent the majority of law abiding citizens do not believe that flicking a butt out the window or driving 56 in a 55, or double-parking for a moment, or stopping in a no stopping zone, or parking in a reserved spot "just for a sec" makes one a criminal.

> While many would seek to trivilize certain laws such as traffic laws, or radio regulations, the logic of it is still valid. <<

But the analogy isn't.
Speeding can kill, DX can't, yet you minimize the subject quite well when speaking of it in context to radio protocol violations.

>If being tagged as a lawbreaker, makes no difference in how you perceive yourself in the grand scheme of things, then fine. <

Well, consider who is doing the "tagging".
You are correct, Hall..it makes no difference.

>Otherwise, when people spin, fight, twist, and attempt to justify the various reasons why they should not be looked at as criminals, that tells me that deep down inside, it does bother them to some degree, and these spin tactics are done to appease their own consciences, and to a lesser extent, an attempt to soften their image in the eyes of other people. <

Yup, you're right...like those that derive their delight from insulting or inflicting malice on another.
And then there are those of us who don't give a damn what others think of us.

>People who deliberately disobey rules and regulations, do have questionable moral standards. <

You're about as qualified to make that statement as I am to say that those who take pleasure in anothers discomfort have severe psychological problems.
Scratch that, no you're not.

>Otherwise they would follow the rules. <

"-must-do-as-told-must-do-as-told"
Is that what was being repeated while you were assaulted as a child by a grandfather who should have been genuinely loving? No wonder you are the way you are. Dave, seriously man, talk to a counselor or someone about that. Just the way you relegated that tale, the words you used describing your grandfather "slapping you upside the head" leaves little doubt as t your deep rooted hostilities. It's a good thing you have this forum to vent, otherwise, well.....

>For those who have deep convictions that certain rules are inherently wrong and should be changed, they have a constitutional process, that can be followed to have the laws changed.
Mearly breaking them in some sort of "protest" earns no respect, <

Now that is irony in all it's finest.

>but making the effort to accomplish your goal will earn tremendous respect. <

Dave, who are you preaching to here? Who do you feel needs to earn this respect that eludes you so? Most cbers couldn't give a damn whether you respect them or not.
We're out to DX and have a good time, not play Miss Manners with some disgruntled hammie that has emotional problems.

>But that effort is way too hard for most of these individuals. They want everything easy. That's why they operate CB illegally, and don't have ham licenses OR take the steps to have the laws changed.
Dave
"Sandbagger"
<<

Why bother? No one rallying for a law change were responsible for the double nickel speed limit being repealed. Non-compliance was.

922. What is Good Operating Practice

Newsgroup: rec.radio.cb
Date: 2002-10-10 17:56:55 UTC
From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <%9jp9.5793$CE4.353258@news.bellsouth.net>
Source record: 139699

This is something that all radio operators could heed and make radio a better hobby for all of us

"Good Amateur Practice is a hard thing to define. I'd have to say it's operating with the realization that frequencies are shared, that there's going to be occasional interference and that's no reason to become hateful and paranoid. You have to realize that more people listen than ever before, especially since the events on 11 September, and our rights end where another person's begins."

"It means giving a little ground even if you have a right not to, in order to help preserve Amateur Radio and not cause it to get a bad name or hasten the day when it becomes obsolete."

"It means not using that one Kenwood rig on 6kHz bandwidth when there are lots of people on the band."

"It means not acting like an idiot just because you were stepped on. It means being aware that we all love Amateur Radio, and why damage it just to save face?"

"It means cutting a net or a contester a break even if you don't have to and even if you have no interest whatsoever in nets or contesting."

"It means being nice, because one thing we don't need more of are idiots in the radio world. Now this doesn't touch on a lot of technical issues such as using 1,500 watts when your signal report received is 20 over 9."

"It just means a lot of things that can't be qualified, such as respecting a band plan because it makes it possible for every mode to have a chance."

"It means operating so that if a neighbor, niece or nephew or news reporter hears you, that person is impressed with Amateur Radio."

"It means realizing that every right carries responsibilities, and just because you may have a right to do certain things doesn't mean it's right to do them in every circumstance."

"It means just because you haven't done a creative thing in Amateur Radio in 25 years, and have been on the same frequency every morning for 135 years shooting the breeze with Harry, who's 200 miles away, doesn't mean you own the frequency."

"It also means NOT operating so whoever hears you becomes sorry as hell they ever got into Amateur Radio in the first place."

Riley Hollingsworth

The right direction to legal ham radio operation as opposed to
illegal cb or 'freeband' operation maybe?

Spin it any way you want but operating illegally on cb or the so
called 'freebands' is on the wrong side of the law.

> >in every aspect of their lives. That seemed important to me. Not only

As opposed to the ones who only understand cb myth, run modded
illegal radios overdriving splatter box leenars, operating on
frequencies they do legally have the right to use, trying to 'walk
all over' each other and spouting endless foul language. You made
the right choice. This is not to slam the many of those who do
operate legally on cb.

That's why we let Twistedhed rant. There is no better advertisement for legal CB. Anyone drawn in by his "CB rules are trivial" campaign soon gets put off by his shell-game conversational maneuvers and the dishonesty and nihilism that goes along with them.

Ham radio is something that gets into your blood <<

Or under your skin, thanks to the likes of "Aaros' named hate crew of KC8LDO Lelnad, N8WWM Dogie Adair,
Frank Gilliland, and Dave Hall.

>
Or under your skin if you could never make the grade to become a ham
maybe?
<

Maybe. You'll never know. But just to set the record straight, I love
certain aspects of hammie radio, I just take issue with the downfall
aspect of it which people like yourself and not unlike "Aarons" hate
posse contribute to.
But you can always ask Dave Hall. I received a few emails that obviously
weren't orignally meant for my eyes...he's a real, um......character,
but he is on record as spying on cbers and several of his lies were
categorized and giftwrapped for me quite nicely. Appears Frank isn't
the only hammie that knows how to use google, only this one is obviously
tired of the myths and lies from some of these hammie cretins..

Why?

Those principles existed on both ham AND CB in years past. If you are
telling me that CBers are
incapable of applying those principles, you are full of it. Irrelevant?
Maybe, that is, if you subscribe
to the anything goes, electronic Darwinism, BIG "Reddio" mentality over
civil sharing of a valuable
resource.

Well, it's a good thing we're on CB, and not amateur radio! :)

When and where is the next big "break/keydown"? I haven't called the cops to report illicit drug activity in a while and need something to report. It's funny to see the cops pull up to all these illegal pot heads keying up their biiiiiiig radid-e-o's. Maybe it'll be at one of those departments that I mailed the latest FCC information to in regards to enforcing FCC rules. :)

Hi Jamey, My name is Woody Parr and I'm up the road in Cornelia. I'm afraid that I'm indirectly responsible for this troll who is badmouthing you at alt.religion.urantiabook. You see he was only there in the first place to attack me.

This idiot is Steven J. Rogovich, 1612 Lake Christopher dr. Virginia Beach, Va. 23464 He followed me to the UB usenet page from alt.radio.pirate He and I (were) both formerly loosely associated with each other in the shortwave pirate radio listening hobby. I USED to be a shortwave pirate but my station has been permanently retired for more than 2 years now. Stevie is still a pirate and is the operator of the station Radio Free Speech. He is also the moderator of a message board at the Free Radio Network < www.frn.net > and goes by the handle of Pat Murphy there. I had a falling out with the people at the FRN a couple of years ago as they became corrupt and were doing so inappropriate things. I dared to open my mouth and openly complain about there stupid activities which since they havn't yet ceased to follow me around the internet anywhere they can and attack me.

Steve is also on the usenet trolling people under the name of Richard Cranium (richardcranus@yahoo.com) He's far too much of a coward to debate anyone using his real name.

Check this out, sharkie:

"Congress shall make no law respecting an establishment of religion,
or prohibiting the free exercise thereof; or abridging the freedom of
speech, or of the press; or the right of the people peaceably to
assemble, and to petition the Government for a redress of grievances."

There are two parts that should jump out at you. First, the freedom of
speech. If someone wants to complain about the current state of the
Citizen's Band, that's their right, and they don't need to be a CBer
to do so.

The second part is the right to "petition the Government for a redress
of grievances", which means that if you don't like a law you have the
legal means to change that law. If all the pirates and bootleggers
were to take even half the money and energy they spend on illegal
operation and use it to change the law legally then I'm sure the law
would change. But they don't, which demonstrates the character of
these illegal ops -- they are nothing but spoiled brats that have no
ambition beyond taking what they want, even if by criminal misconduct.

>dollars, has it stopped people? No.

Yes. In case you haven't been paying attention over the past 20 years, the amount of litter being casually tossed into our environment has been drastically reduced, mainly because of such stiff penalties.

But your argument is still lame, because people don't make a hobby out of littering and jaywalking, and they certainly don't spend hundreds and thousands of dollars of equipment for the sole purpose of doing so.

> Here's another one that's a killer,
>copy a video tape, CD, DvD the fines are as much as $250,000.00, and

If that's your grounds for morality, consider that the MD sniper is taking the chance that he won't get caught. Does that make his actions not immoral? Go soak your head, sharkie.

Thanks for pointing that out, Fred.

Hey sharkie, I used google for a couple months and now I'm an "amigo
of google"? And even when I used it my ISP was in my headers. Matter
of fact, my ISP has been in ALL my headers. So how does that make me
an "amigo of google", sharkie?

This is because the Rockies are little more than a high wall which <30
MHz signals can have a pretty tough time going over. I know this
because AA6FW sez so, and I proved him right with a SW rcvr... I could
get the Pacific Rim nations very easily from my QTH in L.A., but never
got DX from back east, Europe, Africa, Brazil, or Mideast unless the
xmtr was cranking out a LOT of power (still haven't picked up India).
OTOH Pacific is said to be pretty tough for SWLs on east coast to pick
up... maybe the Appalachians have the same effect as the Rockies.

BTW >155 mile QSO on CB is (*gasp!*) a form of lawfucking and
therefore sacrilegious, but I've done it anyways, and had some pretty
friendly chats with CBers in TX and NC. Then came ham ticket and 6m...

958. Is a 10-12 meter rig considered a CB???

Newsgroup: rec.radio.cb
Date: 2002-10-11 04:43:53 UTC
From: CBnoobie <cbnoobe@cb.com>
Message-ID: <uGsp9.20014$ZO1.1182677@news20.bellglobal.com>
Source record: 139737

Found this base station, but the specs show 25 - 150 watts, is this considered a CB?, does the operatorhave to be licensed?. If this is not a CB but a ham radio, why is the frequency coverage so limited compared to other HF rigs, I don't get it.

http://www.rfwiz.com/Ranger/RCI-2985DX.htm

Puzzled.

BTW, if I remember correctly, some of those radios used 6 volts
instead of 12, and some may have had a positive ground. Better check
that before you hook it up to your car battery. Also, I don't know if
the white-face had a tone-alert or car-tel socket, but if they do and
you need the pinouts, just drop me an email. Or you can scout around
for a Sams Photofact for this radio, it is in the CB radio series #2
(CB-2).

Salvia Divinorum has been compared to LSD by a recent ABC News article at the following link http://abcnews.go.com/sections/us/DailyNews/divinorum020401.html

You can legally purchase this sacred herb from various online sources. My favorite is at http://www.iamshaman.com which has both an online store for dried Salvia Divinorum leaf, or super enhanced extra strength leaf which is many times more powerful than just regular leaf due to special extraction techniques that iamshaman.com uses to increase the amount of the hallucinogenic compound known as Salvinorum A back onto regular leaf with many times the concentration of just regular leaf.

The www.iamshaman.com web site is devoted to only Salvia Divinorum and Salvia Divinorum alone. They also have a forum community comprised of over 300 members which are very excited about this sacred plant. Some reports, as the link to the ABC News article above have compared Salvia Divinorum to LSD but in truth it is NOT a new LSD and unlike LSD is so many ways that this kind of comparison is ridiculous, with the exception of the intense visionary experiences reported by those who have smoked or chewed the leaf of this plant.

The owner of the iamshaman.com and Salvia store does not allow the sale of this unique and sacred herb for human use or as a consumable in any way shape or form. Iamshaman strictly forbids its sale for such use and before purchasing this item from them you must promise that you are not going to use it this way. Regardless many individuals have used their products this way and continue to do so, including many of the iamshaman.com online forum members. IamShaman cannot restrict how people use this plant or enhanced products after they receive them and are not responsible for such use. Please do not email them asking about dosage levels etc because Salvia Divinorum cannot be sold for human consumption as this is illegal by both FDA and DEA rules and regulations.

If you are searching for more information about Salvia Divinorum and Salvinorin A my suggestion is to join the iamshaman forum to learn more about this sacred plant used in Shamanistic rituals. The iamshaman forum is a closed forum and cannot be seen by anyone unless they are a approved member of the forum. Law enforcement agencies or individuals who enforce FDA or DEA regulations have not been allowed to join and all individuals applying to join that forum are asked to confirm that they do not work for such agencies. You must be at least 19 years old to either purchase Salvia Divinorum or join the forum. (Age restriction may change without notice.)

This post was NOT made by the owner or administrator of www.iamshaman.com or anyone associated with this group in any way and has been posted without the consent or permission of iamshaman.com. I am not the owner of IamShaman nor have I been asked to make this post for iamshaman.com. I am just a guy who wants to see this information available to as many people as I can get it to. The best place to start is at www.iamshaman.com. Anything written here should be independently verified for accuracy as the forum rules may change without my knowledge.

964. Re: Is a 10-12 meter rig considered a CB???

Newsgroup: rec.radio.cb
Date: 2002-10-11 06:25:23 UTC
From: Will White <googlyelmo@earthlink.net>
Message-ID: <3DA66EB8.46ABA942@earthlink.net>
Source record: 139742

Because it is a rig that is marketed towards a certain segment of the CB community that wants to (illegally) run high power. You will also see linear amplifiers is the 100-500 watt range that purport to be amateur, but are sold as (and without extensive modification will not function below 25 MHz or so) "10-meter amplifiers"most often iin the 2-300W range (why? All the true ham amps on the market today have outputs of at *least* 500W ,usually the solid state ones for running mobile, and most in the 600-1200 range, because of the convenience of using the tubes that happen to achieve that output (and of course the 'legal limit' amps, that do a full 1500, though there are a few, wink wink, that mention that their power supplies are capable of much, much more!) Same principle at work.

There are many makes and models, though the RCI is the better quality electronically. They are often sold with the tag, "Export 10-meter radio" or something similar, but the intention is clear. Yet, some licensed ham operators do use them (There is a group known as !)-X or "Ten'Ten" that is devoted to the 10-meter band. There are sevotees of many individual bands, like 6-meters and 160-meters ("topband") and there have always been radio manufacturers marketing to these groups.

The kicker of course is that these radios are very easily modified to cover CB channels 1-40, usually by clipping or unsoldering a single wire. Your questions are right on the mark, and though some hams use 10-meter only radios, my experience is that they are usually mobiles, in places where there are 10-meter FM repeaters, or else homebrew or Clegg/Gonset bases for 10 AM (which can be found around/above 29 MHz, usually).

One word of caution. Whether you choose to run "overpower" on CB or not (and I truly do not care as long as the signal stays IN THE CB BAND!), the FCC has announced its intentions of stopping the sales and marketing of the above amps and radios. That means if you buy one today, chances are that the warannty will be worthless, and future help with repairs and spare parts will not be there. From following the FCC Compliance Bureau's moves and whims for the last several years (Since they began the long road back to Ham/CB/Part 15 enforcement) it is evident from the press releases and public statements that the crackdown should begin sometime early next Spring, so be careful how you spend your money.

Don't compromise, get a 102" whip and mount it on the rear bumper.
It's the best you can get, and it's also cheaper than most other
antennas. Tie it down towards the front while city driving.

967. Re: Is a 10-12 meter rig considered a CB???

CBnoobie,
No, it isn't a 'CB' radio. It's a radio marketed
as a 'ham' radio, but in actual fact designed to be
converted to 'CB' radio use. It's a ploy to get around
the regulations.
'Doc

Obfuscation is a common tool, to attempt to discredit a valid point. The
key to defending against this is to not allow the subject to be changed.

Are you somehow implying that you have exclusive rights to common English vernacular? Using the same term that you might have used during one of your brief periods of lucidity, is certainly a much different situation than quoting an assembled paragraph.

Your lack of comprehension is exceeded only by your absurdity, and is as true to form as ever.

It's time for YOU to open wide, Aanal Aaron, and post the alleged PROOF you offered to "Gladly" post. Funny how it was YOU who posted the conclusive proof that I could not be "Steve". Even funnier how you continue to disavow that information. It shows your complete lack of intelligent reasoning.

When you can PROVE otherwise, feel free to post it. Otherwise all you're doing is wasting your time and everyone else's space. And everybody knows that, even George and Frank. Time to put up or shut up, Aanal Aaron.

Dave
"Sandbagger"
-

Here's dave talking about the "identity game" preferred by Frank, Lelnad, and himself.

>
This "Identity Paranoia" seem very prevelant on the CB band. I've always chalked it up to the fact that most people run illegally in one respect or another, and have a need to "hide behind the mike", to make any law enforcement action that much tougher.
The real irony is that despite the steps that people take to "hide" themselves, a clever "sandbagger", can gather tons of information from just listening to conversations. I've listened to people, and just from their casual comments, I figured out where they worked, how many kids they have, how old they are, the general area that they live in (And simple DFing would narrow it down from there), they type of cars they drive, the make and models of their radio gear (And whether it's illegal) and so on. You don't have to announce your name and address for people, intent on finding you, to track you down. Dave
"Sandbagger"
<<

Here we have our little angel putting forth that it's the cbers wishing to play the identity game, but admits it's HIM figuring out all this personal stuff on people. I mean, why exert such useless energy? Never mind, you denied doing it.
Hell, this has been Frank and Nads favorite game on this board for years....why just recently Frank Gililand was posting satelllite pics of my neighborhood, and the other day he posted one of my neighbors phone numbers and address. Oh yea, it's the cbers that want this stuff.....yet here Dave Hall meticulously and methodically tells of his exact personal experiences and admits what he has "figured out" about people.
Oh yea, this "real irony" you speak of, Dave, is lost on you.
And just for the record, Hall, I am not "going" off the deep end, nor am I suffering from insanity. I am thoroughly enjoying every minute of it and have always been in the deep end. You're just a s-l-o-w learner.
There's more, Dave, but as I suggested, you should take your little self-waged firefight and grudge you have with me to email, as there is

nothing to gained by posting your personal bullshit except to show those that may be "sitting on the fence" or "newbies" <g> how you lie and are not to be trusted, but that's alright with me if that's what you really want.
But I don't think you will cease your personal activites of troll, as the other loathsomes named with you by your friend "Aaron" of Frank Gilliland, Dogie Adair N8WWM, and Lelnad KC8LDO have all been told this before when they begin personal attacks and they refuse to honor ng etiquette also. "Aaron" was right on with that post naming you four...birds of a feather and dogs of the same smell.

Or how about this little hypocrisy, Dave?
-
>
"I agree with your assessment and attitude WRT the CB radio situation.
Human nature, such that it is, tells us that if you give someone an
attitude, they will likely not pay much attention to what it is you're
trying to say, good or bad. "
<

Self-contradictory. You claimed it gave you pleasure just the other day.
You're on such a downhill spiral that even us lowly cbers feel sorry
for.

>
"This also illustrates my point about "intent" of the law vs. the
"letter" of the law.
I, personally, don't have a problem with someone who keeps a low
profile, runs equipment that is clean, and at modest power levels, and
is considerate of the rights of other operators.If that means that same
operator occasionally escapes to a "freeband" channel or bumps up the
power a few watts to maintain contact with their base/mobile, over
adverse conditions, then so be it."
<

That's Dave Hall...hypocrite galore.
Whatsamatter Dave, having problems deciding just exactly how you feel
about these criminals or do you change your mind to suit the thread
you're trolling? Of course, you can always claim you didn't remebber it,
or you forgot about it.

>
"That being said, I do not support protesting the 155 mile limit by
deliberately engaging in skip talking. Talking skip is the primary casue
of the noise levels and interference that hamper the ability of locals
to communicate with their respective friends and family. It goes with
"respecting the rights of other operators". Skip talkers are not being
considerate (or even cognizant in many cases) of the potential
interference"
<

There is that magic word..."potential"...sorta like the word "if", eh?
<g>

>
that their activity can cause to people that are not even in the same
area.

Since the intended purpose of CB radio was short distance LOCAL communications, the 155 mile limit is reasonable in that vein, even if the frequency band is not always conducive to only local communications. I've always favored moving the CB band to somewhere in the VHF spectrum, where skip would be a rarity, and that whole piece of the equation would be effectively removed."
<

And since things aren't as you like them you figured you would just come in here and lie like hell, contradict yourself, and spread calamity while getting your tongue cut a few times by those that you mistakenly thought you were above.

>
"As for recruiting CBers to the ham radio fraternity, my attitude is this: Most CBers, that are serious enough about radio that they are running on the freeband, are undoubtedly aware of the existance of ham radio. If they already know about it, they are either interested in it or not. If not, it most likely has to do with preconceived notions about ham "attitude" (Stuffed shirts)." <

Hahahahahahaha! Dave can't grasp the concept...hahahah!

>
"I make an effort to try to enlighten the person,"
<

With lies, deliberate disinformation and plain old bullshit.

>
"but if he's set in his ways, I let it drop".
<

You wouldn't still be trying to hump my leg if that post had an ounce of integrity. But as you have shown quite well, none of your posts do.

>
"If they want more information, I leave the door open and will gladly help if and when they decide that they want to make the plunge. Frankly with the current license requirements, I can't understand why more people don't move to ham radio. "
<

That's right...I just said that...you can't grasp the concept. This ignorance isn't shared by all.

>
It's not that difficult,
<

Neither is philately, can younot comprehend why one doesn't take that up as well?

>
" and there are enough diversity in operators,
that almost anyone can find "kindred" spirits on one band or another.
Dave
"Sandbagger"
<

You have demonstrated you're about as far removed from "kindred spirit"
as one can be when comparing yourself to the majority of this group.
It's the concept thing again, Dave. You can not grasp it, no matter how
many times you redundantly reiterate *your* conjured reasons aloud to
yourself. It simply is something you have demonstrated a propensity for
not comprehending.

You could go with a 102" whip, it works well and
is cheap in price. Also you could go with a Firestick, Quadwound or anyone
of those types of antennas. The
problem with a 102" is that if you are off 4X4, it will
be smacking every low tree limb, branch or whatever
low object is around. The wound antennas, while not
giving you quite as good as performance, will be a lot
lower, thus not hitting low objects.

What it means is, people are sick and tired of unlicensed operators stealing
frequencies,
operating anywhere they want, and ignoring the law of the land. With the
appointment of
a ham to the Committee on Telecommunications under Billy Tauzin, perhaps
this is the first
action towards getting some badly needed things done. FCC has already
admitted they made
a mistake by ignoring CB for all those years. Perhaps Mr. Walden and Mr.
Tauzin can get
some funds directed towards getting rid of that kind of interference to
licensed services.

It's quite true! 60 miles is possible. For the best performance you
should use horizontal dipoles as antennas (dipole = 2 x 262 cm = 2
x 103 inches, minimum height = 200 inches above the ground). I use
this antennas for 80 miles (between cities Lodz and Warsaw) and they
are working OK. Mode - SSB. What rig are you going to use?
Best regards,
Chris,

No, this is not a cb rig and is illegal to transmitt with unless
you hold an FCC Amateur (Ham) Radio Operator's License.

"Aaron" wroted:
It's ironic but some time ago I defended police officers in this NG
during a discussion about local LEO's ability to enforce FCC regulations
viz a viz HR2346 (a House Bill that allows communities to authorize
local PD's to enforce FCC CB rules). Quite a few regulars in this NG
argued that the average police officer was too dumb (their words not
mine) to be able to see the difference between a legal radio setup and
an illegal one.
<
--

My apologies, "Aaron". I didn;'t think this true, as I merely thought
you were trying to smear someone....cbers in particular. Hell, it
happened so long ago, who could remember? Compliments one of your hammie
peers (not pals). Someone apparently doesn't like an upperclassman like
Dave Hall messing around with cbers giving the rank and file hammies a
bad image when they are trying their damndest to further hammie radio.
This one surprised even me, as their are a few whopper ironies in the
post:

I definatly agree with your posting on the cheap electronics like tv's
and cellular phones that have little or no tvi filters. I also believe
in creating a clean running system. Between these two things, I believe
we (> CB / Ham / Amatuer radio operators could live in harmony
with the general
public.......Later.........Patrick
<//>

The thing that scares me is the turning over of radio enforcement to
local police agencies.
Police are not trained in RF or radio theory, and as such, cannot make
intelligent decisions regarding who's at fault. I guess is that they
would tend to follow the "squeaky wheel" theory, and vote in favor of
the loud complaining neighbors over your legal right to operate a radio
station.
I operate both CB and ham stations, and have the legal right to run 1500
watts if I choose. Currently I have nothing that exceeds 180 watts, but
if my neighbors were to start complaining, I don't want/need the hassle

of trying to defend my hobby to someone that has NO idea of what they are dealing with, and then having to deal with being labeled as a criminal because I tried to stand up for my rights to my hobby. Right now people are yelling "yea! we need some enforcement to clean up the bands and get rid of all the illegals". But what heppens when LEGAL operators start getting the gestapo treatment by the local "fuzz"? The FCC is still the only fair bet on radio related complaints. Maybe they need more money to enforce the rules, but I'd rather have them than the cops telling me the what-for......

> > for around 25 peak in typical circuits.
* don't use 2SC1969 ! it's only 18WPEP
2SC2312 is better and more safe
the best substitute of MRF477 is MRF455 (another case, but working
in the same electrical conditions)
>
> I have known the 1969 used in small amps but, with the Lincoln

Still using the same old lame excuse. Maybe you should check the
want-ads in the Sunday newspaper -- someone might have some excuses
for sale.

>You haven't proven me wrong yet(i), Frankie. And why are you backing
>up Aanal Aaron's lies?

You haven't proven your argument. You ask me to prove that he DIDN'T
say such a thing, but I can't prove a negative, therefore the burden
of proof is yours. So far you haven't been able to back up even one of
your claims, so I don't suspect you will ever back this one up.
Regardless, is this the post that is causing you so much grief?

Wrong. There's something called "type acceptance" for CB equipment.
The phoney 10 meter radios (old or new) are not type accepted for use
on CB. That means they are illegal for use. (Once again you are
responsible for generating another "CB myth". What's next? You'll be
telling people to disconnect their coax and put it in a mason jar
during lightning storms?)

>The ONLY thing the Notice states is that
> they can no longer be "imported and marketed" as of the effective date

> I make up nothing.

Then post your proof. A statute. A rule. A notice. But you haven't.
All you have done is to speculate that, "the law doesn't say anything
about X, so X is OK".

> But I do remember a similar Notice about
> cell-capable and cell-restorable scanners - which did NOT make every
> previously existing scanner "illegal", just like this one does NOT
> make previously existing ten meter radios "illegal".

Terrific, you found a loophole for sleazy pirate ops to buy and sell
old phoney 10 meter equipment made before 1978. But, if the radios are
not type accepted, they are illegal for unlicensed use, and ilegal for
use on CB. Can't use 'em. Can't operate 'em. Might as well junk 'em.

> I have also given you information on how you can check your "facts",
> something you are afraid to do because it would prove you wrong.
> Contact someone at the FCC and ask for clarification of this Notice.

> least. While you're at it, call the FCC's Interference Complaint line
> and see what they have to say about the causes of interference (hint:
> usually it's cheap consumer electronics!).

It can be. Um, what does that have to do with the sale of phoney 10
meter radios?

> Until you do some research
> I would suggest you find something constructive to do with your time.

I have posted factual documents from the FCC. These are 100% accurate.
They would not be posted if they were inaccurate. If you have an
official statement (or even an unofficial one) from the FCC that
contradicts anything I've posted, then by all means show it. Otherwise
you're wasting your breath with tales of what you imagine you hear on
the phone.

> There is nothing "phoney" about a ten meter radio. It's designed for
> (gasp) ten meters! Whadyano!

You know as well as I do that "10 meter" is a phrase used by sleazy
dealers to sell illegal gear to CBers. There is no legitimate amateur
demand for these contraband radios. It's generally acknowledged
(except by sleazebag CB tech's) that the phoney "10 meter"radios with
roger beeps, channelization, and rebel flags, do not appeal to the
legal amateur market. They are used by illegal outlaw freebanders and
dumb truckers, often on 10 meters.

> Again, where is your righteous indignation about all those amateur HF
> rigs that can be "widebanded" so easily? Every one of them can be
> modified for 11 meters, too. No comment? Loser!

First, it must be emphasized that use of this type of amateur
equipment on unauthorized frequencies, including using it on the C.B.
radio channels or other non-amateur frequencies in the 24 to 32 MHz
range, is illegal, and doing so will subject the user to the same
penalties as mentioned above.
That being said, there are legitimate reasons for some amateur
equipment to be used on certain non-amateur frequencies, such as on

military M.A.R.S. (Military Affiliate Radio System) and C.A.P. (Civil Air Patrol) frequencies. MARS and CAP radio stations are only authorized to operate on specific assigned (non-amateur) frequencies. With just a few exceptions, most of the assigned MARS and CAP frequencies do not fall within the 24 to 32 MHz frequency range. Although some models of amateur equipment (manufactured by companies such as Alinco, Icom, Kenwood, Ten-Tec, Yaesu, etc.) may be capable of operating on the C.B. radio channels, they do not display the assigned C.B. channel number, nor are they designed to deliberately facilitate operation on the C.B. channels.

> I have created no CB myths, but you ARE one. At least I have a ham
> license. And you? Nope. You have no reason to live except to spew your

Hi Jamey, My name is Woody Parr and I'm up the road in Cornelia. I'm afraid that I'm indirectly responsible for this troll who is badmouthing you at alt.religion.urantiabook. You see he was only there in the first place to attack me.

This idiot is Steven J. Rogovich, 1612 Lake Christopher dr. Virginia Beach, Va. 23464 He followed me to the UB usenet page from alt.radio.pirate He and I (were) both formerly loosely associated with each other in the shortwave pirate radio listening hobby. I USED to be a shortwave pirate but my station has been permanently retired for more than 2 years now. Stevie is still a pirate and is the operator of the station Radio Free Speech. He is also the moderator of a message board at the Free Radio Network < www.frn.net > and goes by the handle of Pat Murphy there. I had a falling out with the people at the FRN a couple of years ago as they became corrupt and were doing so inappropriate things. I dared to open my mouth and openly complain about there stupid activities which since they havn't yet ceased to follow me around the internet anywhere they can and attack me.

Steve is also on the usenet trolling people under the name of Richard Cranium (richardcranus@yahoo.com) He's far too much of a coward to debate anyone using his real name.

Negatory, good buddy Georgie-girl WA3MOJ. YOU made the claim that
there were "fewer CBers now than ever before". Prove it. And Aanal
Aaron has posted NO proof of his claim that I am somehow "Steve", even
when you have posted that you know I'm not Steve. Maybe you're
challengeing the wrong person? (Of course, Aanal Aaron H. Voobnutz
isn't a real person.) And even YOU made fun of him when he claimed he
was "studying for his Extra" by saying he had to have a ham license
first! I wonder what caused you to change your position? Maybe Aanal
Aaron bending over for you?

Yes, he said he would post it "Gladly". But he hasn't because he
doesn't have any proof. In fact, he posted a bunch of DNS numbers and
their associates ISP names which proves I'm NOT "Steve". But he'll
never acknowledge it because he'd have to admit he doesn't have a
clue.

Mind you, we already know he doesn't have a clue about much of
anything!

It's really not complicated, Tim. Steve asked for my proof. I "gladly"
posted it. Steve doesn't like seeing it. So he's whining, as usual.

Nothing boring about the FRN. It's been a very useful site since you
were forced to leave for causing trouble and slandering people. And
just sos you know, theres only 1 administrator on the FRN. The owner.
He has a couple of people acting as moderators to keep things in line.
I've lurked in the UseNet groups for years, bobbie-girl.

It's not hard to define at all. It would be stopping Aanal Aaron H.
Voobner (a true phoney) from posting his bovine excrement on a regular
basis, since it isn't relevant, and because he has no license (or, at
best a no-code Tech license) and cannot use HF at all, legally, so has
no Right or reason to complain about "intrusions" on 10 meters or
anywhere else.

How about it, Jerry? Rein him in? He undermines everything you try to
do for the benefit of amateur radio. And YOU have some right to
complain.

Yes this was in direct response to you claiming there were 30-40 million, at the time I asked you to prove it you still haven't then I said there are fewer now than before. So why do you want me to prove what I say and you don't have to? Mine was in direct rebuttal to your claim the burden of proof squarley rests with you, so you prove once again you are not credible and are only a troll making wild claims that cannot be backed up. So I will ask you to provide proof to back up your claim.
--
If you expect people to believe you,
it's up you to prove your correct.

Richard Cranium

Prove it. And Aanal
> Aaron has posted NO proof of his claim that I am somehow "Steve", even

The key here is what other radios do they offer for sale? I see UHF (was VHF in there too?) business type radios, a general coverage HF radio (with optional encryption capability), another HF radio (with 'channels'), as well as the one radio you mentioned. That one radio you mentioned is the only one they had on that site (although, admittedly, I didn't check thoroughly) that could loosely be called an 'amateur radio'. Yes, you would need a license for use on 10 or 12 meters. As others have pointed out, that is not likely the intended audience, however. First, only two bands which won't be terribly useful in a couple of years, plus the fact for less than twice that price you could get a much more capable radio with many more bands plus four times the power output. I did note a 'cb' selection button on the site. Although allegedly an amateur radio, with only that one radio being of ANY use to a licensed amateur, guess what market that radio is aimed at.

--
If you are implying that people, who
hold ham licenses, should be somehow
held to a higher moral standard than
the "common man", then that would
be faulty logic. A ham license is only
a "permit" to use radio, it is not a
"badge of morality".

If it's any help the GE 3-5871A came with a Mitsubishi M58472P chip which can be modified by changing the loop mixing crystal. The radio shared the same board as many Teaberry's from that era. Output was determined by L903, L905 and VR6. I don't have any further information readily available.

So where is it, Aanal Aaron? You haven't posted anything about me yet. All you do is a lame repetitious post of hearsay that you didn't even bother to verify.

Again, your list of DNS numbers and their associated ISPs proves that I'm not "Steve". Try understanding what you post before you spam the newsgroup, Aanal Aaron.

Where's the PROOF, lamer?

I was at work, not my standard 40 hrs. but, my own company,
so I could make some extra cash that is not over-taxed by
the 'Rules Nazi's" in D.C.(you know, our rules means your gold
is now ours!), and the local TV station did its ID etc...
5.4 megawatts of power?
Yeah I know theres a need because of bandwidth and fade.
but talk about a key-down....
If you had a box big enough to hold an elephant, you could
cook him...whole (in about an hour and half).
[Sauce? what goes good with elephant?]

I like SSB, don't get me wrong [good for skip],
but how about FM for local? all that AM QRM QRN etc...
go to 50 or 100 watts and FM, and squelch out the noise.

Antennas
If the thickness of a radiating element has an effect on bandwith,
why not tubing instead of wire?
so which has better RF qualities: red brass plumbing or
steel electrical condiut?
or even foil coated PVC.

Cheep delta loop: coat hangers [for hams]
I must hook up my MFJ 259b to one to see just where
it tunes to.

New Vehicles:
Plastic,more and more.
you wonder why, at least Some radio mfgr. are making their
products with a remote head (face plate) nowhere to mount anything
anymore.
I own a '95 P/U with a bench seat and stick-shift, which leaves only
the roof to mount to. [a no-go] It should go under the dash, but
it is all plastic and the shift lever is right in the way.
Solution: rip out bench seat, go with buckets and console.
not the best,but ok. Makes you want to beat auto engineers
with a drive shaft. Remember when you bought a Dodge,
you could get a CB built into the dash? (shure it was a junk box,
but a great place saver!)

Cell phones,PDA's,and laptops now, why isn't there room?
do engineers ride in the new vehicles before they go to production?
If you grew up making models and modifing them,become rich!
take those talents and fix this (after-market of course!)

I was able to access some data sheets for the MC145151. An interesting design. I especially liked the circuit examples provided. I wonder why I can't seem to find any circuit examples for the 8719? I know its an old chip, but there must be a universal, workable PLL example circuit somewhere for it, or even the data sheet for that matter. However, a websearch has turned out a no-no.

AJ

Why Bob, when has "OT" mattered in this group?
Also, he did include "for sale" in his subject line.

with each other in the shortwave pirate radio listening hobby. I USED
to be a shortwave pirate but my station has been permanently retired
for more than 2 years now. Stevie is still a pirate and is the
operator of the station Radio Free Speech. He is also the moderator of
a message board at the Free Radio Network < www.frn.net > and goes by
the handle of Pat Murphy there. I had a falling out with the people at
the FRN a couple of years ago as they became corrupt and were doing so
inappropriate things. I dared to open my mouth and openly complain
about there stupid activities which since they havn't yet ceased to
follow me around the internet anywhere they can and attack me.

Steve is also on the usenet trolling people under the name of Richard
Cranium (richardcranus@yahoo.com) He's far too much of a coward to
debate anyone using his real name.

These 3 amps are in excellent condition. Prices do not include shipping

Texas Star V-MOD 1 pill with variable output control and rec preamp $75

No Name 5lb Maul 1 driving 4 pills, auto SSB, rec amp, external jacks for on/off and rec amp. This amp is like new $300

Thunderbolt 305 Tube Base Amp 1 driving 3 6LQ6's, rec amp, SSB switch, standby, Excellent shape, Tubes are all good producing 400-500 watts pep with 2-4 watts input. $300

I bought this radio one year ago. It has only been used by me as a base station, has never been in a car. I had it professionally tuned up. It has Variable PWR from .5 to 8 watts and modulates to around 30. Modulation has been tuned up as well. This is a VERY loud radio and has alot of swing. I still have the Galaxy 55 Box, mounting brackets, power cord, the original stock hand mic, manuals, and whatever else it came with. I have it all. Has the freq counter, large eas to read meter and has Bands A thru F giving you 240 channels. I promise you will not be disappointed with this Galaxy. $170 ... Thanks for looking

> Is that the "modified sine wave" that comes from an APC?

Nope. What they mean is the APC unit generates a rectangular waveform output. It's NOT a square wave. The width and amplitude of each half of the rectangular waveform is designed so that it reads about the same voltage as a sine wave does on a meter. Also the exact waveform is designed so that your "typical" rectifier circuits end up with approximately the same output voltage as they would have with a true sine wave input.

The negative point about these UPS supplies has to do with consumer equipment that uses line transformers in their power supplies. The rectangular waveform generated by these UPS supplies are rich in high frequency harmonics. The transformers used in your typical consumer goods are only designed to handle frequencies between 50 and 60 hertz. The frequency limiting factor is the thickness of the iron laminations used to make the core. The higher the frequency the transformer is designed to work with the thinner the laminations must become. If the laminations are too thick for the frequency they heat up from eddy current effects. Now with the high frequency content of the voltage waveform, out of those APC supplies and similar units, have a tendency to heat up the input line transformers. In some cases they have out right failed. That's why you may hear people recommending you use a UPS supply with a "true sine wave output". They cost more, but that is due to the fact that generating a good quality sine waveform is harder to do than a rectangular waveform.

Ah, no, but it is rather simple to explain. The inverter bridge
generates a square wave of voltage, switching between +V and -V
supplies. The output of the bridge is connected to a series tuned
load, which is tuned for the frequency of the square wave being
generated. The series tuned load acts like a "filter", which lets only
current at the resonate frequency flow through the circuit if the "Q"
is high enough. Thus mainly the frequency component in the spectrum of
the square wave, which matches the load frequency, cause any current
to flow. The series tuned circuit look like a high impedance at all
other frequencies that are present in the square wave's frequency
spectrum. Since the frequency components, in the voltage square wave,
we are talking about are sine waves the current resulting from just
one component will also be a sine wave.

It also is no longer a square wave either. A square wave has to have a
50 percent duty cycle, i.e. must be symmetrical about it's center.

> A Class A amp,

Yes the signal on the collector, or plate, will have a DC offset. Most of the time the amplifier stages are AC coupled so the resulting output signal has no DC component. If you look at the open end of the coupling camacitor you will indeed see the square wave swinging below ground.

Consider the no-signal condition with a class "A" transformer coupled stage. Normally the transformer's primary, which is connected between the transistor's collector and supply, is going to be much lower in resistance than the reflected load impedance under signal conditions. Thus little power is wasted in the transformer's windings.

For example lets take a transformer with a 1 to 1 turns ratio, just to keep the math simple. Let the load on the secondary be an 8 ohm speaker. The transformer primary winding's resistance will be only a faction of an ohm. However when a signal is present the primary will now see the low primary winding's resistance PLUS the 8 ohms due to the load impedance. Since DC is NOT coupled through a transformer the bias current does not cause any losses in the load impedance, just in the very low transformer primary resistance.

The case, where the transformer's primary resistance is much lower than the reflected load impedance, is normal. If this were not true then the transformer could not efficiently couple power on it's primary to it's secondary winding. Most power transformers are around about 95 to 98 percent efficient.

True. Read what I wrote above a bit more carfully - "by varying the
DUTY CYCLE of a high frequency square wave."

>

Yes the square wave on the collector load will have that offset. Now
if you couple that square wave to another stage using a capacitor the
DC offset is gone since capacitors don't pass DC.

> and negative potentials with equal pusle widths.

Which is a square wave.

> That requires a
> pulse-width modulator, and is not the same as varying the duty cycle
> of a square wave.

Samething, different terminology. Pulse width modulation would be the more accurate term to use however few on this news group would understand exactly what it meant so I used a term that, I hope, would be more familiar to people.

wave.

Then the transistor would be switching between saturation and cutoff. You could do the same thing with another circuit that doesn't even look like an amplifier. I don't know of anybody wasting a class "A" amplifier like this when other circuits work just as well with fewer parts. And yes the efficiency would be high, but then we are no longer really talking about linear operation either.

And if you look closer you will see that the resistors are across
points where you would expect to find the inductors. Now where are you
going to find a "resistor" that has less DC resistance that a couple
of turns of 14 gage wire? You see my point?

I've heard may people do the same. The rich harmonic content of a
square wave gives somebody with a lot of experience a clue to the
frequency response of an amplifier by looking at the output waveform.
But you really have to know what to look for.

Have you ever tried using a sweep function generator to do the same
thing? You put the frequency sweep voltage on the X-channel, and the
response from the amplifier on the Y-channel. Then you of course have
to have the scope in the X-Y mode. I would like to find a good used
high frequency function generator, around 10 MHz or more, to use the
sweep function for checking plug-in or home brewed IF filters.

The MC145151 is a general-purpose PLL, but the MB8719 was designed for
specific applications. You will find that most of the PLL's found in
CB radios were designed only for CB radios, and are difficult to put
into service for any other function. For the same reason, the VCO's
used with these specialized PLL's also have limited capabilities.
That's why I suggested the MAX038.

You should be! With more companies looking for spectrum to use for
their new digital wireless service they would like to offer. Nobody's
spectrum is safe anymore.

Anybody can use HF. All it costs is $49.95 to get a cheap AM CB rig at
Rat Shack, and another $19.95 for the antenna.

Now that's an IC I didn't get a chance to check out yet, but will. You know, I have a circuit diagram around here somewhere that uses the MC145106, a popular CB Pll IC, in another application where the frequency out is between 1-3 Mhz. I guess at least some of the MC series are a lot more flexable.

AJ

No kidding. Unless you have the trigger function fully mastered, you
might completely miss a repetitive leading-edge spike, even if you
have already filtered out the ringing.

>Have you ever tried using a sweep function generator to do the same

I don't normally do that. If the distortion analyzer tells me
something is amiss, I'll put it on the scope and feed it with square
waves sweeping through the full spectrum. This way I can tell if there
is a transformer that is self-resonant, or if feedback is causing
oscillation or ringing at one or more frequencies. This should be done
dual-trace, comparing input to output, as I'm sure you are already
aware.

> I would like to find a good used
>high frequency function generator, around 10 MHz or more, to use the

Then you are just filtering the square-wave, making it a Class E amp.
The output of the filter is still going to be sine in both voltage and
current.

That's what I said. And that DC voltage means there is DC current, and
therefore DC power that must be dissipated. In a Class A amplifier,
that DC power is at least half of the input power. It cannot be any
less.

>> >Unless I "AC couple" the stage. 8-))

Most power AND audio transformers are 90+ percent efficient at
coupling the AC power. You agree that a Class A amp (sine wave) can be
no more than 25% efficient. That means 25% of the power is the AC
power that is coupled to the load. The other 75% MUST be dissipated.
Whatever isn't lost in the transformer WILL dissipate from the
transistor/tube, even if it's the majority of the DC power.

>> >If you change the duty cycle of a square wave it is no longer a

That's true, but the DC power doesn't disappear when you add a cap. If it is prevented from being dissipated by the load then it MUST be dissipated by the source (the amplifier).

>> you are pulsing alternate and equal positive
>> and negative potentials with equal pusle widths.
>
>Which is a square wave.

No it isn't. Mental picture: Go one second at ground potential, then pulse positive for, say, 50 ms. Go another full second at ground, then pulse negative for 50 ms. Continue. That's not a square wave.

And you are confusing your own terminology. First you say that "A square wave has to have a 50 percent duty cycle, i.e. must be symmetrical about it's center", and "If you change the duty cycle of a square wave it is no longer a square wave", but then you say that even though you change the duty cycle it's still a square wave. Pick one definition and stick to it, will ya?

>> That requires a
>> pulse-width modulator, and is not the same as varying the duty cycle
>> of a square wave.
>

>Samething, different terminology.

No it isn't, as I stated above and below.

> Pulse width modulation would be the
>more accurate term to use however few on this news group would
>understand exactly what it meant so I used a term that, I hope, would
>be more familiar to people.

When you vary the duty cycle of a square wave, you are not stopping at
ground potential. Also, when you shorten the positive cycle you
necessarily lengthen the negative cycle by the same amount.
Pulse-width modulation does not necessarily change the length of the
negative cycle. However, pulse-position modulation DOES, and THAT'S
another story...

>wave.
>
>Then the transistor would be switching between saturation and cutoff.

Absolutely true. But if you are suggesting that the transistor is not capable of power dissipation because it is saturated or cutoff then you are wrong. If both the transistor and the load have negligible resistance when the transistor is in saturation, then the power supply would drop to almost zero and you would have almost infinite current through the transistor and load. Obviously, that doesn't happen (unless something or someone is faulty).

If the load is resistive, then the load is going to be dissipating a considerable part of the power. However, if the load has negligible DC resistance, then the DC power must be dissipated elsewhere. But you are forgetting that any AC coupling is not going to be purely resistive. So while the active device is switching between cutoff and saturation, that doesn't mean the current or voltage is going to follow suit. For example, AC coupling using an output transformer: When the transistor saturates, the voltage across the transformer begins at maximum but the current lags the voltage (apply time constant of Rtotal and L, etc). So the current isn't following a square wave. That's how part of the DC power gets converted to AC power. Now remember you still have DC power that isn't converted to AC power, and MUST be dissipated by the total DC resistance of the circuit. And that DC resistance is Vcc divided by the sum of the DC current of the transformer plus the average DC current of the transistor. Don't forget that the current doesn't follow a square wave, but lags the voltage according to a time constant. And if the current isn't following a square wave, then the resistance of the saturated transistor is not constant, or even zero, but variable throughout it's time under saturation. If it has resistance, it dissipates power.

>You could do the same thing with another circuit that doesn't even

It depends on whether you are using the amp as an AC or DC amplifier. As a DC amplifier it can be very efficient, as is proven daily by the use of switching power supplies.

>> >I think it depends on just what kind of amplifier they analyze. For

Actually, I misread your original comment, that DC bias power wasted
in a LCR parallel load with no signal would be zero, as it would be
with any other type of load. The power lost to DC bias is complete
BECAUSE there is no signal.

"Sheer unstoppable usage"? That seems to imply that CB'ers around the world would defy their governments and operate on 11 meters even if the 27 mhz CB service were dissolved and the spectrum were reallocated. You're probably right. But it wouldn't be something to be proud of.

If you are going to defend Cranium, why don't you answer some of the questions he refuses to answer? Like, what was his standard of 'proof' that I am Jon Avery? Or his claim that nobody abuses the 10 meter band? How about explaining why he keeps whining about Voobner under the premise that Voobner hates CBers, but when someone ELSE posts something hateful about CBers he ignores it? And you STILL haven't found the quote that supports Cranium's claim that Voobner said, "all 10 meter radios are illegal". Where is that post, Timmy?

You say want 'proof'? No you don't. You want another reason to whine about Voobner.

It's far from safe. Pager services can work even on low HF. Commercial beacons and tracking systems can also work on 11m, as could remote control appliances. Or CB could easily be eliminated to expand the legitimate 27MHz commercial services. That's not a far-out possibility as the VHF hi and lo bands are filling up fast. And if there is enough money behind such a change, you can bet that the FCC will get off it's lazy ass and enforce the band.

>flexable.

Flexability depends on how much money and effort you want to spend. If
you want to use the MB8719 as a code practice oscillator you could
probably make it work. But I can think of a lot of better and cheaper
ways to accomplish the same task.

1090. Re: SWR?

That's true. BTW, I did get a chance to check out the MAX038 site and I'm impressed, especially with the workable PLL circuit example they provide.

To be a proper CB radio it must follow precise specs as laid out by the FCC.
Otherwise, it is an amateur radio.
Having an output of 25 watts makes it illegal to operate on 11 meters.
As the specs show that it covers 10 AND 12 meters, this does not mean to say
that it also covers 11 meters.
Knowing Ranger's reputation, I would venture a guess and say a good
technician could convert it to work on 11 meters quite easily.

Yes. You would need a ham radio license to operate the radio. BEFORE you use
it.

Since he claims that he's not a CBer, and that rarely exercises his
[alleged] ham priviledges, by his own "logic" he has no business
complaining about ANYTHING in this newsgroup!

Cool, huh? I built one and it works great. Sometimes you need a cap
across the output because there can be bumps in the sine wave. But I
don't think that would be an issue if the thing was built properly on
a PC board and everything well bypassed, instead of thrown together on
a protoboard like I did it...;-)

Pager services can work even on low HF. [it can,but the services wanted by
"normal" users need bandwith (marketing hype from mfg.s)]

Or CB could easily be eliminated to expand the
legitimate 27MHz commercial services. [yes, they might,but then
again 220-222MHz ? who knows? not much of a success.(see:UPS)]

That's not a far-out possibility
as the VHF hi and lo bands are filling up fast. [Why do you think thoose
FAT analog TV band(s) were sold?]

You will see more digital modes and trunking. buying bandwith from Uncle
"fatcat" Sam is bit pricy now that the economy has tanked.
With anti-cellphone laws for use in cars, you might see audio file downloads
[narrowFM pulse] to replay later.

and...

for all that licenced use, try monitoring and see if there really is use?
Might just be "camping" like internet domain names.

the move on freq. migh be on the 1GHz and up.

FS/T TEN-TEC 705 MICROPHONE

I have a like new Ten-Tec 705 mic has a 2 tone SSB Pulser to tune your amp installed. Does not have the Goofy Beer Can foam head I put a Brand new Black Round Bullet style foam Ball on the head. I hate Those Grey beer can foam heads!. I think i still have it here if you want it though.
I put a Brand new 12 foot Heavy Duty Motorola High Way Patrol type Coiled cord on it Also. So you can move around in the shack. It is currently wired for a Kenwood TS-930.
I would like to eithier sell it or trade it for maybe a Kenwood mic or a Shure 526T. Or sell out right for 80.00 + shipping. paypal check etc.

1105. Re: What is Good Operating Practice

Wow, a ton of active licensed users listed. And not one of them are
"freebanders". Sure blows hell out of the excuse that it's a
"victimless crime"...

And I didn't even list all of them. Anyone that wants a list of even
more licensees can go to FCC's search page and compile their own list.
But yes, it does kinda demonstrate that these freqs are not abandoned.
Blows the hell out of Twisty's excuses, doesn't it? LOL!

Agreed... I'm sure Uncle Sam would be REAL proud to have wannabes like
Aaron along for the ride, oh yeah... he's probably upset because he
couldn't pass the bar exam and the police depts don't want him either.
>

Ehh, he'll fabricate something... just like he thinks I'm guilty of
all these horrendous jamming incidents. But little does he know that I
haven't even transmitted on CB or 6m in 5 years!!! Doesn't mean he'll
try to put together a bogus tape of "me", the day he decides to get
personal.

> Aand Aanal Aaron couldn't call down the wrath
> of his Mommy if he tried!

LOL---that old broad's probably 6 feet in the ground. Her son probably
drove her to it.

No, not really, You want to make the SWR's as even throughout the band as possible. that is why you should check it, on CB, at channel 1 - 20 - & 40

Naw yeti, you must be mistaken, twistie and timmyboy say these
'freeband' frequencies are abandoned and unused, so no harm in
them using those frequencies even though they are not licensed to
do so. You trying to stir up trouble?

I am not familiar with the wilson antenna, but if it is like most mobile antennas it isn't very broadbanded. So the best you can do is pick one end of the band or the other, or middle, where ever you are most likely to transmit and adjust the swr (swr is singular, not swr's plural) for best performance there. You aren't likely to get it even over the entire 40 channels. By setting it at channel 20 that will be the best compromise for the entire band.

Seeing as I don't respond to your posts, it's pretty clear who's doing the "fabricating" here, Guy. But if it makes you happy, go right on imagining that I'm accusing you of jamming, making bogus tapes of you, etc. whatever.

Uncle Charlie,
I'm not particularly worried about part of the ham spectrum being sold out from underneath me. Which doesn't have anything that I can see to do with good operating practices. I think your demonstrated attitude is fairly common on the CB band, unfortunately. It just shows a lack of foresight. Good operating practices are not easy to 'do'. It requires a little self discipline, will power, and some consideration of others. What goes around, comes around, and that's what you see these days. I think that's a shame, and a sad comment about CB'ers and hams.
'Doc

Is that like a double negative?

If so, wouldn't a transsexual homo be a straight person?

And this will be my final comment in this NG.

I regret that this thread brought out the "no-code nazis" to dictate federal regulations to the group. I simply had a problem that I needed resolved, and a great number of you were kind enough to help me resolve that problem.

My sincere appreciation to those that provided info relative to my initial post. The mod worked great and I am enjoying the radio.

Just one thing in case the question is ever posed to the group again, the wire to cut wasn't green, it was red.

Ozark333, I'll "holler" at ya whenever I am in the Springfield area.

Thanks again for all the info, folks. See ya.

Funny as heck, Aanal Aaron. What do you call it if not a response? Geez, you lie like a rug! All you've ever done is fabricate, so we know who's doing the fabricating. His name is (allegedly) Aanal Aaron H. Voobner, except that there's not a single Voobner in the entire US of A so it's just another fabrication.

Aanal Aaron has proved that he believes whatever he wants to believe,
whether he himself has posted proof to the contrary or what. Sorta
like Georgie-girl Busch: He doesn't have to prove anything, he just
has to say it to make it true! ROTFLMAO!

LOL you have been taking notes from Twistie I see, you make comments can't back them up now you try and turn it around LOL. No the post are out there and they don't lie as you do. You have made a few specific "wild" claims and have yet to offer any proof. Yet you want proof from others ie, aaron ? Your a flat out Joke Dick Head as well as a lying Troll Which you were correctly labeled long before you got to this NG and deservedly so.

Here are a few question you have left unanswered which are in direct rebutal to claims you have made.We want proof you demand proof from other the ball is in your court or will you be a hypocrite as usual?

Did you find the 10 meter band?
How many Cber's are in the USA?
If your not afraid to post or be anonymous whats your callsign?

Maybe it would be smart to get your Ham Ticket , FM is better then AM , get
a 10 dollar book at radio shack and study and get your license and talk
around the world after getting your code,
just a thought .. 11 meters is out of date

You're grasping at straws now. Slobbering with the anticipation of flaming Aaron.

> Geez, you lie like a rug! All you've ever done is fabricate, so we
> know who's doing the fabricating.

Aaron isn't the only one on this news group who has been caught in a lie.

>His name is (allegedly) Aaron H. Voobner, except that there's not a
>single Voobner in the entire US of A so it's just another fabrication.

How do you know there are ***NO*** persons in the USA by the name Aaron Voobner? I'm guessing you did a simple online search? Used an online people directory? Again this comment you made can be summed up thusly: "You're grasping at straws now. Slobbering with the anticipation of flaming Aaron."

Do any of the points you made mean ANYTHING? This is very weak. Richard, I think you can do better.

Dave

about

You should really be paying more attention. The FCC created the FRS service to give the kiddy CBer's some place to hang out and not cause trouble over more than a mile or so. Then they created the MURS channels for those who have a real need for license free local communications over a 5 to 10 mile range fixed or mobile. Or for a few extra bucks for a GMRS license which allows the use of more power and repeaters for city wide coverage. That takes care of the needs for most users of the band. It's not to far fetched to see the day when the FCC pulls the plug on domestic 11m action. Since they are going to pull the plug on analog TV in a few more years, like they switched from low band to mid band VHF for domestic FM broadcasting some long years back, pulling the plug on 11m can happen real easy. All it takes is somebody with a real need for the spectrum, cash in hand, and then just tune in to any of the 40 CB channels for an example of what a sewer pit 11m has turned in to over the years for the final push off the cliff.

Try getting a 10 meter receiver that actually works. Been hearing
plenty of illegal truckers on 28.085 and that is with just a 50 ft
wire antenna strung out in the tree. "OH!!" says dickie as he
slaps his forehead, "an antenna of course!!!, why didn't I think
of that?"

It's not an amplifier since there is NO input waveform to amplify. The
common name for the circuit is a 'series resonate "H" bridge'
inverter. The square wave is generate by the switching of the power
devices, and has nothing to do with any kind of input waveform.

There is no "DC bias power" being wasted since the amplifier never
comes close to operating there. That just goes right back to the
electronic switch example I discussed before.

Possible with a different circuit topology.

>That means 25% of the power is the AC
> power that is coupled to the load. The other 75% MUST be dissipated.
> Whatever isn't lost in the transformer WILL dissipate from the
> transistor/tube, even if it's the majority of the DC power.

Ah no I don't. Remember the comment I made about circuit topology? In
the case above the AC load line, and the DC load line are not the
same, thus the analysis is going to be different from the case where
the DC bias power is also dissipated in the load. Since in the

transformer coupled case the load is isolated from the collector, and assuming in the ideal transformer case zero winding resistance, there can be NO bias power wasted in the transformer, theoretically of course.

You keep missing the point. If the square wave switches between it's two states in zero time, just when do you think the amplifier is operating near it's bias point? It never does. It's either in cut off or in full saturation.

That's correct because you have three levels, +v, ground, and -v. A
square wave has only two levels. I never mentioned that the waveform
had any level other than +v and -v.

>
> And you are confusing your own terminology. First you say that "A
> square wave has to have a 50 percent duty cycle, i.e. must be
> symmetrical about it's center", and "If you change the duty cycle of
a
> square wave it is no longer a square wave",

Correct.

> but then you say that even
> though you change the duty cycle it's still a square wave. Pick one
> definition and stick to it, will ya?

Read a bit more carefully. I wrote about changing the duty cycle of a
square wave. I did not call the result a square wave. In fact what I
did write was "that the resulting rectangular waveform", which is not
the same thing if you remember what the definition of a rectangle is
from geometry.

>
> >> That requires a
> >> pulse-width modulator, and is not the same as varying the duty
cycle
> >> of a square wave.

> >be more familiar to people.
>
> When you vary the duty cycle of a square wave, you are not stopping
at
> ground potential.

That's modifying the amplitude of the square wave. If I told you that I was going to use something at a 50 percent duty cycle are you going to tell me that you expect I'm going to run it at half setting, or only run it about half the time? Duty cycle when I mention it means a time variation, not an amplitude variation. So my usage above is correct as it stands. I've never had somebody mention a change in duty cycle when they meant a change in the amplitude of some quantify.

> Also, when you shorten the positive cycle you
> necessarily lengthen the negative cycle by the same amount.

Not always. It depends on the method used. For example some schemes use a fix length pulse repeated at a varying frequency. You end up with a variable duty cycle waveform, or as you would prefer a PWM type waveform, but varying in frequency. Try it using a pulse generator sometime. Or. Make a one-shot, then trigger the one-shot using a variable frequency signal source connected to the trigger input of the one-shot, then look at the one-shot output as you vary the trigger frequency on a scope.

> Pulse-width modulation does not necessarily change the length of the
> negative cycle. However, pulse-position modulation DOES, and THAT'S
> another story...

Save that for another thread topic. 8-)

> >
> >Ah, no, its rather different.
>
> Not much. It's just more primitive.

It is more complex because either the exact switching points have to be pre calculated and stored in logic, or calculated on the fly using a microprocessor. Take a look some time at those variable speed AC motor controllers. It didn't surprise me to see several DSP processors in there to do all of the duty cycle control required. With a simple light dimmer you're just triggering the SCR's gate at a variable time

delay from the zero crossing of the line voltage.

> you are wrong.

In the ideal case there is zero power loss. If you want to skate off
in to "real world" circuits the discussion will quickly get out of
hand because everything will get mired in the details. Many of which
don't matter for the main points.

> If both the transistor and the load have negligible
> resistance when the transistor is in saturation, then the power
supply
> would drop to almost zero and you would have almost infinite current
> through the transistor and load.

Can't happen. You did say "load" right? So unless that "load" is also
a short circuit the load will set the limit on the current.

>Obviously, that doesn't happen
> (unless something or someone is faulty).

A slip of the finger on the keyboard perhaps? 8-)

>
> If the load is resistive, then the load is going to be dissipating a
> considerable part of the power. However, if the load has negligible
DC
> resistance, then the DC power must be dissipated elsewhere.

Only if there is a real resistance somewhere. Don't forget that P =
I^2 * R. The smaller "R" becomes the less power is lost in the circuit
for a fixed value of current.

> But you
> are forgetting that any AC coupling is not going to be purely
> resistive.

This is an example of getting in to non-ideal circuit operation. All
this is going to do is confuse the heck out of both of us. You can't
on one hand argue about theoretical this or that, then start dragging
in non-ideal circuit behavior. Just stick with ideal circuit elements.
The discussion works just as well with them, and without the
additional confusion and lengthy the explanations required too.

> So while the active device is switching between cutoff and
> saturation, that doesn't mean the current or voltage is going to
> follow suit. For example, AC coupling using an output transformer:
> When the transistor saturates, the voltage across the transformer
> begins at maximum but the current lags the voltage (apply time
> constant of Rtotal and L, etc).

If the load is purely resistive on the transformer secondary, and
assuming an ideal transformer with zero leakage reactance, the
transformer primary will be also purely resistive, thus the voltage
and current will be in phase.

> So the current isn't following a
> square wave. That's how part of the DC power gets converted to AC

They call them "switching power supplies" not Class "A" amplifiers for
a reason. And if they were "amplifiers" where does the input waveform
it amplifies comes from? No amplifier I've ever seen generates it's
own input. If it did there is another word for that, they are called
"oscillators".

>
>

> aware.

As long as the square wave is low enough in frequency input and output will look close. As you crank up the frequency the higher frequency harmonics get filtered out. Then you can expect to see some ringing and or a general smoothing out of the waveform so that it looks closer to a sine wave. You get the nasty ringing effect many times when testing filters that have a high "Q" value.

>
> > I would like to find a good used
> >high frequency function generator, around 10 MHz or more, to use
the

I'm looking for a good used one at a swap if I can find any. I did pick up a used B&K model 3010 for $50. It's only a 2 MHz function generator. I had to fix it since the DC offset for the output waveforms were screwed up. It turned out it was just a cheap 3 terminal 15 VDC regulator IC failed. Once that was replace I tweaked it up and now it works just like new.

Hello,

I have been out of the swing of things for a while. I recently came back to CB to find out that the old familiar faces are gone. Who makes a good export CB (10m/11m) radio these days? Also, what chasis is it based on?

Thanks in advance.

Best Regards,
Mac

Actually, you're not.
Anything you operate on 11M has to be type accepted for that service.

Sorry, Eric. You are wrong on all counts.

-Aaron-

FCC Part 95
RULE 9 - Equipment
{A} You must use an FCC type accepted CB transmitter at your CB
station. You can identify an FCC type accepted transmitter by the
'type acceptance'label placed on it by the manufacturer. You may
examine a list of type-accepted equipment at any FCC Field Office or
at FCC Headquarters. Use of a transmitter which is not FCC
type-accepted voids your authority to operate the station.

FCC CALL CENTER INFO
2. NON-APPROVED C.B. RADIOS

Q. What is a legal C.B. radio?
A. All radio transmitters and receivers which are intended to operate
on the 27 MHz Citizen's Band (C.B.) channels must be approved by the
F.C.C. before they can be imported, advertised, sold or used. The
manufacturer must be issued an F.C.C. grant of equipment
authorization, called "certification", as indicated by an FCC ID on
each unit. If the radio has a label showing an FCC ID, and the ID can
be verified by checking the Equipment Authorization database on the
F.C.C./OET Web page, then the radio is legal.

Q. What kind of radios are illegal to use on the C.B. radio
channels?
A. Any radio transmitter, receiver, or transceiver which is designed
by the manufacturer to operate on the C.B. radio channels, but which
has not been granted an F.C.C. equipment authorization is illegal.
These non-approved radios may appear in several different forms:
1. "10-Meter Amateur" radios, which have been designed so as to be

readily alterable to operate on the C.B. radio channels, and/or on other non-amateur frequencies in the frequency range from about 24 to about 32 MHz;
2. "Export" or "full channel" radios, which are designed to operate over all, or a portion of, the radio spectrum from about 24 to about 32 MHz, including the 27 MHz C.B. radio channels; or
3. F.C.C.-approved C.B. radios which are designed so as to be readily alterable to operate on frequencies in the range from about 24 to about 32 MHz, which are not assigned to the 27 MHz C.B. Radio Service.

Q. I've heard that some of the "big name" amateur radio equipment can also be altered to operate on non-amateur frequencies, including the C.B. radio channels. So why are these radios not considered to be "non-approved C.B. equipment"?
A. First, it must be emphasized that use of this type of amateur equipment on unauthorized frequencies, including using it on the C.B. radio channels or other non-amateur frequencies in the 24 to 32 MHz range, is illegal, and doing so will subject the user to the same penalties as mentioned above.

Nice try but no cigar fool. Your Kenwood is not type accepted for
the cb service and is not legal to use on 11 meters, even if you
do have a ham ticket (which means nothing on 11 meters) and even
if you do keep the power levels to the legal limits. So up yours.

Sorry to upset you Len, but it has nothing to do with code, no-code,
or Nazism. Since you were unaware of federal regulations governing CB,
I provided accurate information in order that others reading this NG
would not be misled.

The plain facts are that your Galaxy 99V is illegal to operate on CB
channels and your CB linear is illegal to operate on CB channels.

If you still believe this info is inaccurate, email me the address of
your police chief, I will be glad to provide him with a copy of US
CFR Title 47 Part 95.

What would be the purpose? You would not be able to make a decent
contact on 11 meters because of the total chaos that exists there.
Hams have the entire 10 meter band, they hardly ever used 11
meters when it was a ham band. That is one reason the FCC took if
from the amateur service and established the cb band. It is just
too bad that the operators who use it turned it into such a mess.

Maybe to you it is useless, but to the hams it isn't. It belongs to the amateur radio service and the hams obtain the right to operate there by virtue of obtaining a license. It isn't there just for the taking by illegal operators. It is in use, if you listen when the band is open you will find plenty of cw in use on the band. If you want to hear a useless span of radio frequency spectrum, just tune your precious 11 meters and listen to what those with your attitude have made of it. As I say, the hams do care about 10 meters.

All spectrum issues are covered by the ITU at some point, from extremely low frequency in the tens of KHz up past 300 GHz for example. The main concern is sharing spectrum among all countries that have a need to use it. That doesn't mean that a different use can't be found for some segment of the spectrum. I think most CBers are in for a bit of a shock when they find out just what is ALL of the allowed uses that 11m can be put too. So as long as the spectrum is used as per ITU agreements the FCC can do what ever they feel like with it. You haven't noticed all the shifting around the FCC has been doing the past number of years taking away spectrum from one group of users to give to another for all manner of old and new uses?

I don't think he's clipping your pipe for no reason.
My neighbors never do that.
Maybe you have an RFI problem that you need to clean up?
Of course staying with legal limit gear would simplify that.

I'm not defending his actions, they are clearly wrong.
However, it would seem that you threw the first punch.

I've heard em on 28.055, .075, .085, & 28.135, and thats just the
domestic stuff, and not to mention the south of the border Spanish
speaking mess. Good Luck putting that Genie back in it's bottle.

The TRC-440 is an AM radio if I recall correctly, you can't add sideband but
can gain extra channels by changing the loop mixing crystal. To peak the
radio adjust L102, L104 and L106. I believe the modulation limiter is D107.

Then it's a power oscillator, but the principle is the same, and you
still haven't explained how to get square wave voltage and sine wave
current on the same line.

>> >output signal has no DC component. If you look at the open end of

>electronic switch example I discussed before.

Technically, EVERY wave has a DC component, even if the DC is at
ground potential.

But are we talking about the same thing here? Where the output is
switched between Vcc and gnd? If so, and unless the output is
permanently held at ground, there MUST be DC potential (offset), and

it will be somewhere inbetween Gnd and Vcc.

How can I explain this any more clearly?

>> Most power AND audio transformers are 90+ percent efficient at
>> coupling the AC power. You agree that a Class A amp (sine wave) can

>course.

Then the DC power is lost in the active device! It's got to go
somewhere, right? Haven't I said that before? Does the 'power fairy'
swoop down and magically dispose of the DC power? Of course not, it is
DISSIPATED, if not by the LOAD then by the SOURCE.

>>

No, YOU keep missing the point: it DOESN'T NEED to operate at or near it's bias point, it only needs to have an average DC offset, i.e, DC power, which is INHERENT TO and DEFINITIVE OF a Class A amplifier, and is also the LIMITING FACTOR for the efficiency of a Class A amplifier!

If the output waveform is symmetrical, regardless of shape, DC power can be no less than half of total input power! Haven't I said THAT before, too?

And if there is any doubt, think about this: If there is no DC power being dissipated then there is no DC power being conducted, and the amp won't work!

Read a bit more carefully yourself: I said "pulse witdths".

Hey, I have an idea: let's drop this nowhere semantic argument to the
benefit of both of us, and just define a square wave as switching
between two voltage potentials. Kinda like the generally accepted
definition, ya know? Whaddya say?

>>

>cycle when they meant a change in the amplitude of some quantify.

I wasn't talking about varying the amplitude -- I was reiterating my
comments on the pulse-width modulation used to vary the output of a

switching AC power supply/amplifier. Remember when I talk about "pulse widths"?

>> Also, when you shorten the positive cycle you
>> necessarily lengthen the negative cycle by the same amount.
>
>Not always. It depends on the method used.

Oh bullshit, the 'duty cycle' is a universally understood term, and I didn't say anything about changing the frequency. It's clear that you are just arguing for the sake of argument, and this conversation is finished.

That wholly depends on the frequency response of the amplifier.

> Then you can expect to see some ringing
>and or a general smoothing out of the waveform so that it looks closer
>to a sine wave. You get the nasty ringing effect many times when

Like I said, it depends on the frequency response of the amplifier.
BTW, pushing a square wave through an amplifier is a very good way to
determine the fidelity of an audio amp.

Like I said (once again), check out the MAX038. It's a VCO chip with
sine, square and triangle outputs, and works to well over 20 MHz. If
you need a sawtooth, just blank half the triangle. If all you want is
a triggered sweep, you can build a sawtooth and blanker with a couple
logic chips and a couple transistors. Mimms came up with a really easy
and fast triggered sweep generator; I built it when I was in High
School and I still use it.

http://www.arrl.org/news/stories/2001/04/04/2/

Response to ARRL 10 and 12-Meter Intruder Survey "Overwhelming"

by ARRL Monitoring System Coordinator Brennan Price, N4QX.

NEWINGTON, CT, Apr 4, 2001--The response to ARRL's call last fall for reports of apparent unlicensed operation on 10 and 12 meters has been "overwhelming," according to Brennan Price, N4QX, administrator of the ARRL Monitoring System. The survey last October 1-14 was initiated in response to an increasing number of complaints from the amateur community. Such reports have increased over the past few years, right in line with increasing solar activity.

"We expected a moderate response, but the volume was overwhelming," said Price, who's been analyzing the reports. "More than 400 separate reports, nearly all from United States amateurs, detailed over 1000 separate instances of apparent unlicensed operation."

An analysis of the languages being spoken indicated that a substantial amount--nearly half--of the apparent transmissions originated in the United States. Most of the remaining reports appeared to document transmissions originating in Latin America, with a small fraction, about 2 percent, originating in Europe.

Reports varied from respondent to respondent. A few gave a specific location of the unlicensed operator. The reporters were queried for additional information, but Price said that in all cases, the operation ceased before efforts to find the station could commence.

"The variety of languages, dialects and beam headings relating to these transmissions clearly indicates that this is a worldwide problem" Price said. Surveys by monitoring-system administrators in other IARU Region 2 countries confirm this conclusion.

Price says the data collected have documented the magnitude of the problem and should help the administrations of IARU sister societies to address the problem. He explained, however, that operation within a given country is a matter that only the telecommunications authority in that country can address.

ARRL shared its data with the FCC. Enforcement Bureau Special Counsel Riley Hollingsworth already had indicated a willingness to take action against domestic unlicensed operators, and the results of the survey have prompted a renewed FCC interest on that front. Price points out that before the Commission can take any action, an offending transmission must be documented and its source found.

"Given the changeable nature of 10 and 12-meter propagation, especially at the top of the sunspot cycle, this is not an easy task," Price said. "Domestic intruders should become less widely heard, but more easily found, as the solar cycle declines and propagation tends to become more localized."

Price said the amateur community also has to realize that the FCC's technological resources are limited. "Although the Commission's HFDF facility is a useful tool and is generously made available to help amateur concerns, it is not available for routine requests to DF this type of operation," he said.

One fact remains indisputable: unlicensed operation declines drastically when licensed operators are in abundance and yielding few clear frequencies. On major contest weekends, unlicensed intruders often are nowhere to be found on 10 meters, Price said. Active usage of the spectrum not only is the quickest, easiest way to discourage unlicensed operation, it is also the best way to defend exclusive amateur allocations against interests that continually seek more room for commercial allocations.

Price said the FCC relies on the Amateur Service to be self-policing and has indicated that it is most likely to act in suspected unlicensed operator situations when amateurs themselves document the cases. "It is not easy or quick work, but it has been successfully done in the past," he said.
To introduce amateurs to the work required, ARRL has published--with FCC review and approval--the article, "Unlicensed Operators on the High HF Bands: What to Do?" (QST Mar 2001, pp 102-103).

Since the fall ARRL survey, the FCC has received information regarding instances of unlicensed 10-meter operation. Enforcement letters were expected.

"ARRL appreciates the efforts of all survey respondents who have volunteered their time," Price said in his summary report. "We encourage your continuing efforts to document specific instances of unlicensed operation. We hope that publicity of forthcoming enforcement actions will minimize the problem on the domestic front."

With some area of overlap, perhaps we could more easily interest them in
moving up.
SSTV, APRS, packet, psk31, there's lots of things that might interest them
to move up.
Plus, I'd hope that some degree of sanity might rub off on the band :)

Licence class has nothing to do with it. Tech, gen, or extra, all can run
homebrew or modded equipment, in the ham bands.

Similarly, no class of licence allows operating non type accepted gear in
the CB band.

See, I knew you were clueless... You can't "legally" operate ANYTHING on (in) the CB band that is not type accepted... Now that doesn't stop most of us, but hey, at least we KNOW the laws unlike yourself, who only THINK you do...

Where is the section of Part 97 (or any Part of US CFR Title 47) that
grants hams the privilege of running modifed equipment on CB, or
operating non type accepted equipment on CB? There isn't one.

Gotta wonder where these rumors come from. Truck stop techs?

With some area of overlap, perhaps we could more easily interest them in
moving up.
SSTV, APRS, packet, psk31, there's lots of things that might interest
them to move up.
Plus, I'd hope that some degree of sanity might rub off on the band :)

>Lelnad attempted a conveyance to Tim with:
You should really be paying more attention. The FCC created the FRS service to give the kiddy CBer's some place to hang out and not cause trouble over more than a mile or so. Then they created the MURS channels for those who have a real need for license free local communications over a 5 to 10 mile range fixed or mobile. Or for a few extra bucks for a GMRS license which allows the use of more power and repeaters for city wide coverage. That takes care of the needs for most users of the band. It's not to far fetched to see the day when the FCC pulls the plug on domestic 11m action. Since they are going to pull the plug on analog TV in a few more years, like they switched from low band to mid band VHF for domestic FM broadcasting some long years back, pulling the plug on 11m can happen real easy. All it takes is somebody with a real need for the spectrum, cash in hand, and then just tune in to any of the 40 CB channels for an example of what a sewer pit 11m has turned in to over the years for the final push off the cliff.
--
Leland C. Scott
KC8LDO
<

And you shouldn't still be telling people what to do, but since you apparently don't have a problem with it, you won't be upset with me telling you something......educate yourself. The condition of the bands (IE: skip, amps, bababooey) mean nothing in the context of frequency allocation. You upgrading before Christmas? You can change your vanity call plate to refect such positive changes.

We all see you outright lie. This is the usual course of action from
"Arrons" named posse of trouble on rec.radio.cb...Lelnad KC8LDO, Dave
Hall, Frank Gilliland, and yourself.
Besides, you're missing posts again. You asked for a reference even
after you were told you were wrong and I gave you the laws of the entire
state of California along with Santa Cruz, once again showing what an
illiterate joke you have made of yourself. Anyone else you wish to
falsely accuse of something?

>No the post are out there and they don't lie<

You're right...it's you that's lying.Ddo you need to see just exactly
where it is you told me I was wrong concerning Santa Cruz? How about the
post where you asked for proof because you couldn't figure out how to
find it yourself? You RAN from the post, I supplied everything you
asked. Lying is *your* forte, George. It's required to be included in
"Arrons" club of calamity he formed by naming Frank Gilliland, Dave
Hall, Lelnad KC8LDO, and yourself the troublemakers of
rec.radio.cb....all nocodes and an upperclassmen that lies and spies and
drools.

my point was the 11 meter band is in very heavy usage world wide. the fcc cant pull the plug on it alone and even if the itu tried the third world countries will never give it up. mexico will be 30db over 9 no matter what riley and the feds do and thats just the real life truth whether you guys like it or not

Pay no attention to twistie, because he can't even pass the nocode
test he accuses anyone that does have a ham licensee of being a
nocode. There is nothing wrong with holding a nocode license, it
is a good entry class license to ham radio.

> Stop looking under Part 95

The holder of any class of ham license can use modified, or
homebuilt equipment, but on the ham bands only. Holding a ham
license does not grant one the authority to use this equipment on
the cb band.

Hi Jamey, My name is Woody Parr and I'm up the road in Cornelia. I'm afraid that I'm indirectly responsible for this troll who is badmouthing you at alt.religion.urantiabook. You see he was only there in the first place to attack me.

This idiot is Steven J. Rogovich, 1612 Lake Christopher dr. Virginia Beach, Va. 23464 He followed me to the UB usenet page from alt.radio.pirate He and I (were) both formerly loosely associated with each other in the shortwave pirate radio listening hobby. I USED to be a shortwave pirate but my station has been permanently retired for more than 2 years now. Stevie is still a pirate and is the operator of the station Radio Free Speech. He is also the moderator of a message board at the Free Radio Network < www.frn.net > and goes by the handle of Pat Murphy there. I had a falling out with the people at the FRN a couple of years ago as they became corrupt and were doing so inappropriate things. I dared to open my mouth and openly complain about there stupid activities which since they havn't yet ceased to follow me around the internet anywhere they can and attack me.

Steve is also on the usenet trolling people under the name of Richard Cranium (richardcranus@yahoo.com) He's far too much of a coward to debate anyone using his real name.

No, not really, You want to make the SWR's as even throughout the band
as possible. that is why you should check it, on CB, at channel 1 - 20 -
& 40
I am not familiar with the wilson antenna, but
<

BUT, you are going to comment on it anyway and give advice...yea, we
know what to expect from the nocodes of cannery row..

>
if it is like most mobile antennas it isn't very broadbanded.
<

Wrong. For cb and freeband purposes, this antenna is very broadbanded. I
can go from 24 to 32 and the highest I'll get anywhere is slightly over
a 2:1 SWR, and this is only in one area. It's dead flat where I want it
and is below 2 almost everywhere else. It's not an accident this is one
of the best mass-produced mobile antennas. Can't comment since Barjan
took them over.

>
  So the best you can do is pick one end of the band or the other,
or middle, where ever you are most likely to transmit and adjust the swr
(swr is singular, not swr's plural) for best performance there. You
aren't likely to get it even over the entire 40 channels. By setting it
at channel 20 that will be the best compromise for the entire band.
<

BS. This antenna can be adjusted to be practically flat out on the legal
40. There is no need for compromise on the legal 40 when speaking of the
SWR in this manner with this antenna.

Oh, not many worry, I assure you.

>
If you expect people to believe you,
 it's up you to prove your correct.
<

When asked about the validity of a claim, that would usually be the
proper thing to do. Frank hasn't figured this out. He thinks repetition
of his claims will make it true if he puts it forward enough times. Ask
him about the replies he received concerning the utility communication
companies, or the design company, or the modes that are now used.
Or else you can do get the info yourself then drop this thread as fast
as you dropped the Santa Cruz thread you were dead wrong about. We
wouldn't be offended if you ran from this one as fast as you did the
Santa Cruz thread.....we know how it must pain you, just base it
on Lelnad and Frank's responses and shill posts. Still, it makes one
feel good when they know they have made a fantastic contribution to this
place, such as taking a certain responsibility for making the
malcontented nocodes reduce themselves to the point of..well..you see!
Give a child a sharp object........

Uncle Charlie,
I'm not particularly worried about part of the
ham spectrum being sold out from underneath me.
<

Of course you're not. You spend more time on cb evidenced by the sheer time you spend among us as compared to the time you spend among the hammie boards. They intimidate ya' Paul? Y'a probably freeband, too. Ask me how I know,,,go on....ask me....I dare ya'!

>
Which doesn't have anything that I can see to do with good operating practices. I think your demonstrated attitude is fairly common on the CB band, unfortunately.
<

As is yours among the hammies that plague both servicest. Hell, they need an upperclassmen to hone their bullshit on, no wonder you're hand is always in the air saying, "OOoooooooo, Mistah Kottah, pick ME PICK ME!"

>
It just shows a lack of foresight.
<

One doesn't need foresight to see that you forsaked your hammie duties, both written and unwritten rules...(morality ya' see)........ Dave Hall said this makes YOU a criminal, Mr Lalli.

>
Good operating practices are not easy to 'do'.
<

For the MAJORITY (hahahahah) it is extremely easy, for one not unlike yourself, we understand...it is the mantra of the nocodes, here, and unfortunately, some upperclassmen such as yourself as well practice this crap.
It requires a little self discipline, will power, and some consideration of others.

<
Hahahaha...Paulie admitting it's a challenge for him to be polite and act human......

>
What goes around, comes around, and that's what you see these

days.
<

I agree. I thnk it's a great thing. A shining example can be seen in all
the ISP's that were ripped from beneath your lousy azzes....but
wait...us lowlife freebanding criminals mostly have the same addy's
,ISP, we always did. AND we still access the group the same
way.....let's start with you Paul, YOU don't. But who cares why, I
chalked it up to "what goes around comes around". ...but who gives a
dman what I think? I'm just here to educate and not let you pearls of
swine intimidate. Now isn't that noble and valiant of me?

>
I think that's a shame, and a sad comment about CB'ers and hams.
'Doc
<

Good thing angry prejudiced hammies opinions like yours have a cb forum
like this to vent. Who knows what you might do with all that rage?

Do you think that all these licensees are just "camping"?
<

Noooope! Most are just abandoned. Dunno where you got that chart, but it's not accurate at all..but hey Frank, you already proved they were abandoned. We had this little session last year where you were shooting your mouth off about the same thing. ANOTHER claim you made was that you were about to contact a bunch of these private companies to ask them if they still use these modes an freqs..you even went as far as to say you would come back here and post the results. As was expected, you turned tail and ran, producing nothing, and when asked about your claim, you ran further.

Appears you indeed did some inquiring and once again the ego damage was too great for you to handle from being wrong and me being right. The info you put forward is deliberately wrong concerning these companies. For the most part, they long ago abandoned these freqs...matter of fact, I did some checking of my own and in the first paragraph of yours I found several frequencies that were not even correct according to your allocation chart...of course, you didn't take into consideration the age of the chart and how many of those businesses simply let their "frequency rental permit" expire..matter of fact, you didn't even bother t check if your info was the least bit accurate.....anyhow, it's not accurate and you know it.

You were called on this before...now post your responses from the company (like you claimed) to prove me wrong. On second thought, you already tried that and failed, didn't you, Frank mah boy? Figured enough time would pass and people would forget? Maybe, but I won't let that happen. Back your claim...this old, outdated and misappropriated chart means nothing. Next time, do the work yourself instead of plagiarizing something you found on the net or parroting another. Or you can post from voobner@yahoo..whoops...no you can't.

Blesss you my child. I didn't know you were breaking your neck to join my
fan club.

Fan Club? Sorry don't try and flatter yourself numnuts the only thing I
would break twisty is your pencil neck

We all see you outright lie.
****
Really post something I lied about

Besides, you're missing posts again. You asked for a reference even
after you were told you were wrong and I gave you the laws of the entire
state of California along with Santa Cruz, once again showing what an
illiterate joke you have made of yourself. Anyone else you wish to
falsely accuse of something?

>No the post are out there and they don't lie<

You're right...it's you that's lying.Ddo you need to see just exactly
where it is you told me I was wrong concerning Santa Cruz?

Yes, and show me the proof that what you claim is indeed exactly correct

How about the post where you asked for proof because you couldn't figure
out how to find it yourself?
****
I want to see the post where you provide proof of your claims. Just because
you say it doesnt make it so.

You RAN from the post.
****
I didn't run anywhere, I grew tired of waiting for you to post proof
instead of telling me to find it you made the claim just back it up with
solid proof that marijuana is LEGAL in Santa Cruz without a doctors
prescription. It should be real simple to find since you said you posted the
info just repost califirnias Laws or whatever.

I supplied everything you asked.
****
Except proof that marijuna is legal in Santa Cruz without a precription.

I am still waiting and please remember "Just because you say it doesn't make
it so."

From: Ole Shit <oleshit@hemphead.com>
Message-ID: <mvecnTW9o47YsTagXTWc3w@News.GigaNews.Com>
Source record: 140066

I thought marijuana was Legal Twitsy, you said it was decriminalized what about these prison terms, For you to have pot someone had to sell it you right?

Selling marijuana in any amount is punishable by 2 - 4 years in the state prison.

Means it is ILLEGAL

Sale of marijuana to a minor is punishable by 3 - 5 years in prison.

Means Illegal

Possession of 28.5 grams or less of marijuana on school grounds when the school is open is punishable by up to 10 days in jail and a $500 fine. Possession of greater than 28.5 grams or more of marijuana in a school zone is punishable by up to six months in jail and a fine of up to $500.

Means it is Illegal

Cultivation
Offense
Any amount (exception for patients or caregivers) felony 16 months

Possession
Offense Jail time Fine
28.5 g or less misdemeanor none $100
More than 28.5 g misdemeanor 6 months $500
28.5 g or less on school grounds while school open misdemeanor 10 days $500
More than 28.5 g on school grounds while school open misdemeanor 6 months $500

Decriminalization: The state has decriminalized marijuana to some degree. Typically, decriminalization means no prison time or criminal record for first-time possession of a small amount for personal consumption.

are 30-40 million Cbers across the USA
-
What will that prove? Losing face on the Santa Cruz debate didn't
satisfy your voracious appetite,.....ah..well, some prefer the
ornithological diet.

>Twithead I didn't lose anything Marijuna use is Illegal in Santa Cruz.
Plain and simple, end of story until you prove otherwise Ill just sit
here and wait seems like it is eating at you<<

Hi, George. I claimed it was decriminalized, you said it wasn't so and
asked for proof. I don't see you as a mess of total contempt yet, and as
you asked politely, I so chose to provide you with a page of California
drug laws showing my exact claim correct.
Nah, George, nothing is eating me, but I did notice it seems like you
are busting your tail more and more each day to lay with the swine.
Usually you throw your one-liners at Landshark or someone else and get
on down the road......but lately, I've noticed a shift in attitude from
you. Everything ok up there? It's a little early for the winter blues
and depression to be kicking in...hasn't even snowed except a few
flurries this morning in MN.

Absolutely. I just got word that another of my students passed his
test, and is on the air.
Me, I never held a no-code ticket, they came in about 6 mos after I got
my novice.
-
Novice? You can disregard my question about how the ARRL helped you and
has your best interests at heart, as you wouldn't know, since you were
never a nocode. Student? Are you a v.e.?

I will be once I get my paperwork turned in.
I run classes locally for anyone who is interested in getting a ticket.
You don't have to be a ve to run classes, just to give the test for real.
We use online tests for practice, to find out what parts they are weak on,
then we go through that so they understand it, not just drilling on the test
answers. When you understand the reasons behind the answers, then the
questions are easy.

As far as the arrl, I've never noticed any help from them.. Could be my
local section manager, a luddite at heart.

Where did he say that, Lamer Franikie-girl? He didn't. Another BS
misinterpretation from you.

why don't you answer some of the
> questions he refuses to answer? Like, what was his standard of 'proof'
> that I am Jon Avery? Or his claim that nobody abuses the 10 meter
> band?

I never said that; I said that I haven't yet heard anyone "intruding".
Making things up as you go, Frankie-girl? Naturally you are.

How about explaining why he keeps whining about Voobner under
> the premise that Voobner hates CBers, but when someone ELSE posts
> something hateful about CBers he ignores it? And you STILL haven't
> found the quote that supports Cranium's claim that Voobner said, "all

> Rock on,Dave. Do you still use 11 meters?

Very infrequently. I find it essentially useless near cities, but on the road I've had as much luck in finding interesting people to chat with as on the ham bands. It's certainly more useful for highway conditions.

1305. Do HAMS use more than 1500 watts ?

Newsgroup: rec.radio.cb

This may be a silly question,but...if HAMS are legally allowed to use 1500 watts (,just as c.b.ers are allowed to use 5 watts a.m.) how can you tell if a HAM is using more than allowed ? Does this ever happen ? I mean in todays "age of mega-power",dial -a-watt,multi KW capabilities,isn't it just as easy for a HAM to use too much power as it is a c.b.er ?

It's called a station inspection.

Does this ever happen ?

Ever, probably.
Is it more than 0.1%, I'd guess not.
Doubling your power, all other things remaining the same, increases your
signal at the other end by 50%. At 1kW, you're way into diminishing
returns.

I mean in todays "age
> of mega-power",dial -a-watt,multi KW capabilities,isn't it just as easy
for a
> HAM to use too much power as it is a c.b.er ?
> Semper Fi , Scooter Tramp

Also depends on the band, I don't know anyone who could afford, or could use
1kW on 24GHz.
OTOH, I have a schematic and construction article for converting a microwave
oven to an FSTV transmitter on the 2.4GHz band, and a 1400 watt oven! :)

Hello there,

: This may be a silly question,but...if HAMS are legally allowed to use 1500
: watts (,just as c.b.ers are allowed to use 5 watts a.m.) how can you tell if a
: HAM is using more than allowed ?

By measurement of their signal done locally and even to some relative
extent from a distance using calibrated S-Meter and some references. Other
measurement methods also work pretty well.

: Does this ever happen ?

All the time...

: I mean in todays "age of mega-power",dial -a-watt,multi KW
: capabilities,isn't it just as easy for a
: HAM to use too much power as it is a c.b.er ?
: Semper Fi , Scooter Tramp

Done all the time... even many legal amateur amplifiers will exceed the
authorized power level.

cheers
skipp

Hi Jamey, My name is Woody Parr and I'm up the road in Cornelia. I'm afraid that I'm indirectly responsible for this troll who is badmouthing you at alt.religion.urantiabook. You see he was only there in the first place to attack me.

This idiot is Steven J. Rogovich, 1612 Lake Christopher dr. Virginia Beach, Va. 23464 He followed me to the UB usenet page from alt.radio.pirate He and I (were) both formerly loosely associated with each other in the shortwave pirate radio listening hobby. I USED to be a shortwave pirate but my station has been permanently retired for more than 2 years now. Stevie is still a pirate and is the operator of the station Radio Free Speech. He is also the moderator of a message board at the Free Radio Network < www.frn.net > and goes by the handle of Pat Murphy there. I had a falling out with the people at the FRN a couple of years ago as they became corrupt and were doing so inappropriate things. I dared to open my mouth and openly complain about there stupid activities which since they havn't yet ceased to follow me around the internet anywhere they can and attack me.

Steve is also on the usenet trolling people under the name of Richard Cranium (richardcranus@yahoo.com) He's far too much of a coward to debate anyone using his real name.

  Absolutely. I just got word that another of my students passed his
test, and is on the air.
Me, I never held a no-code ticket, they came in about 6 mos after I got
my novice.

-

>Novice? You can disregard my question about how the ARRL helped you and
has your best interests at heart, as you wouldn't know, since you were
never a nocode. Student? Are you a v.e.?
--

>I will be once I get my paperwork turned in. I run classes locally for
anyone who is interested in getting a ticket. You don't have to be a ve
to run classes, just to give the test for real. We use online tests for
practice, to find out what parts they are weak on, then we go through
that so they understand it, not just drilling on the test answers. When
you understand the reasons behind the answers, then the questions are
easy.
<<

No argument there. If more took this approach, it would be a better
hobby.

>As far as the arrl, I've never noticed any help from them.. Could be my
local section manager, a luddite at heart.
<<

Ha! Wonder if they could have been the inspiration for American
earthfirst! monkeywrenchers.

Or else you can do get the info yourself then drop this thread as fast
as you dropped the Santa Cruz thread you were dead wrong about.

>Sorry Twist you never posted the info that you claimed to be true
instead you tell me to look for it well Twist ya know what No Banana.<<

You missed the post. I did post the link to the laws...go back and check
it out.

****
I did see you post a link from Norml, if that what your talking about I
stand corrected I didn't see it until this evening when i searched g88gle.

.

> Remember this classic line from Cranium " If you expect people to
believe you, it's up you to prove your correct"

I tend to agree, especially if someone questions the claim and it seems
outrageous, and most of it is that comes from the house of Usher that
Frank Gilliland, Lelnad KC8LDO, and Dave Hall, named by "Aaron" attempt
to re-deconstruct.
****

Ok Twist without making this long and drawn out I think we have been arguing
semantics, you claimed mere possesion, and of course thats all you claimed
you did not specify any quantity. i claimed It is illegal I also did not
specify anything in particular such as possesion sale growing etc. So
anything other than possesion is Illegal would you agree with that
scenario, even if you didn't the law is what it is and really even under
28.5g is Illegal, you say "decriminalized" call it what you want you but
you cannot fire up a joint in public without some repercussions call it a
misdemeanor or what have you it is still considered Illegal. You guys like
to refer to it like a traffic ticket, well is speeding allowed, left on red?
racing? etc the answer is No, it is illegal to speed what happens if
caught? You are punished, fined what have you. Ok here is the best part Sale
of marijuana is *more* Illegal than possesion jail time, growing it is
Illegal, so where did you get yours? Someone probably had to sell it to you
right? then you helped them comit a felony. twist I am not against marijuana
at all I am just pointing out it is not just something that can be done when
and where you want without repercusisons. Posses marijuana in a school zone
that fits your classic *mere possesion* but yet that is also illegal and

highly illegal in many states enough to warrant possible mandatory jail time. So you see I think me saying it is illegal makes me in fact still correct because it is , you said mere possesion was decriminalized I can agree with that without getting into specifics. Just because it is decriminalized doesn't mean it is not in fact still Illegal. Have your rebuttal and i am done with this thread

>Instead Twist just because you say it doesn't make it so I am still waiting for you to provide proof of your claim re: Santa Cruz.
<<

Already did. Get one of your buds to teach you how to find the thread and click on the appropriate link, Frank is an expert in google, maybe he'll help, or are you still pissed at him for including you in his named posse of hate?

They included me without my permission How dare them. I did see it tonite while searching google a link to norml

We wouldn't be offended if you ran from this one as fast as you did the Santa Cruz thread.....

my point was the 11 meter band is in very heavy usage world wide. the fcc cant pull the plug on it alone and even if the itu tried the third world countries will never give it up. mexico will be 30db over 9 no matter what riley and the feds do and thats just the real life truth whether you guys like it or not
--

>Guess you have never heard of the Russian woodpecker, if the FCC likes they can render 11 meters useless and run your sorry ass off of there. Or they can enforce those stupid enough to continue to talk there pick your poison.<<

Anything is possible, but think about it for a second...do you think there is a remote possibility that a great number of those that used to talk there may take to greener pastures? I mean, this angle has been put forward many times.
Let's say, oh , a tenth of all cbers decided to do that.....isn't that way too many for the feds to deal with? Isn't a hunderedth too much?
I mean, all hammies know about the clubs that let "all the wives" use the same call when on the repeater...what would stop this from being implemented on a wide scale that would make what some cry about now seem like small potatos? According to Dave Hall, these folks are criminals. How about it, JerryO? Are these guys criminals? "Cause it's happening in your backyard right where ya' live, Jer, if ya' really wanna report them.....!

Point... nowhere in any of my ham mags does it give credit to an
"Aaron H. Voobner" for tipping off the FCC about guys like bigmouth
Flippo. This adds to my sneaking suspicion that the whole Aaron
Voobner persona was cooked up by some tongue-in-cheek prankster who
may or may not be a closet right-winger... apparently he thinks it's
pretty damn funny to read our responses to his police-state fantasies.
Ah well, if a concentration camp barrack is his idea of heaven, that's
his business, not mine...

BTW if the FCC knows they can collect $100K fines from clods like
Howard Stern & Dr. Gene Scott, why would they knock themselves out to
go after broke guys like us? FCC doesn't offer rewards for turning in
jammers, either.

Guy Richards

Hi, George. I claimed it was decriminalized, you said it wasn't so and
asked for proof.

Read one of my other posts. regarding this. decriminilized doesn't take
away from it still being illegal. The only thing that means the pentaltys
are less severe for *mere possesion*

I don't see you as a mess of total contempt yet, and as
you asked politely, I so chose to provide you with a page of California
drug laws showing my exact claim correct.

Yes up to a point it does say decriminalized. Again I wont get into in this
thread I already explained it earlier tonite check that one why duplicate
things.

Nah, George, nothing is eating me, but I did notice it seems like you
are busting your tail more and more each day to lay with the swine.
****

We sow what we reap, the fruit of my labor are courtesy of the other posters
If they themselves acted in another fashion i may as well but as you see
Twist it is me and there is a gang who try to pile on me but I am like the
immortal Hulk Hogan I say my prayers and take my vitamins and come back
strong with the big boot

Usually you throw your one-liners at Landshark or someone else and get
on down the road......but lately, I've noticed a shift in attitude from
you. Everything ok up there?
****
Yeah just a little ornery lately, the peanut gallery keeps me busy posting
here.

It's a little early for the winter blues
and depression to be kicking in...hasn't even snowed except a few
flurries this morning in MN.
****
Perhaps mid life crisis setting in and a few keyclowns to flare it up. I do
appreciate the concern though, perhaps a spell of the Florida sun will perk
things up.

Nice try, not even close though split works, tx on 1 freq and after you un
key listen on another freq unless he would need a repeater to listen and
talk on the 2 different freqs same time, same band etc etc

And my point that it is Illegal has been validated time and time again. In fact I did bring this to light in an earlier post I think you jumped in to the thread when I was talking to "tools" who said it was Legal, and to this day I maintian it is indeed ILLEGAL. You say decriminalized, for mere possesion and you are correct for anything under 28.5 and not in a school zone anything else regarding it has not been decriminalized even with that big fancy word it is still Illegal. we are arguing semantics. You cannot say I am wrong or I lied how can I lie by saying it is Illegal that is the truth.

Scooter,

If you poll the average citizen about human nature they will say that the vast majority of people are basically honest. But when you ask the small minority of people who are criminals the same question, they will swear that the majority of people are dishonest. Funny how that works. Could have something to do with the company one keeps. Or maybe it's because dishonest people need validation from their own kind to keep them feeling OK about what they do. To them the whole world is as crooked as they are. Criminality loves company, or something like that.

But back to the question at hand. Scooter, you want to know essentially if many hams run too much (i.e. illegal) power. Hm. Let's see. You want facts not opinions, so unlike Skipp May out in Davis, CA, I'll reserve my opinion for another time. To get a no-BS realistic answer to your question, first you'd want to investigate what the average ham runs for equipment and what bands he operates on. Also you'd want to know out of 650,000 licensed amateurs how many have been cited by the FCC for running illegal power on the ham bands. And you'd want to look over back issues of QST and CQ, some of the ham newsgroups, or the QRZ forum. Find out if they are filled with multi-KW amplifiers for sale. Read the letters columns, read the articles, and see if "running big watts" is the hot topic on everyone's mind.

Finally, where would one most likely get honest, quantifiable answers to these and other ham-related questions? In a CB newsgroup filled with power-junkie CB'ers, pirate operators, freebanders, and authority-hating, outlaw hams? Of course not. It only makes sense that if you want answers to questions about hams, go to where the majority of hams are. Try a ham forum, go to a local ham club, write to the ARRL, or if you live near a big city, stop into an HRO or AES store. As always, make up your own mind, don't let the repeaters of "CB myths" make it up for you.

-Aaron-

In <2EIq9.2106$014.50166@reggie.win.bright.net>, "ruralreader"
<sylinen@somtel.net> whined repetitively:

><<<<<since when does a list mean USE?? >>>>>

It's a list of USERS that are LICENSED for the respective frequency.
That means THEY have the right to that frequency, not YOU. THEY have
the RIGHT to use it as THEY see fit, not YOU. THEY have the RIGHT to
use it or NOT to use it anytime they choose, and if they choose not to
use it at any particular time that doesn't give ANYONE ELSE the right
to use it unless they are LICENSED! There are a lot of frequencies and
a WHOLE LOT of licensees: To claim that these frequencies are not
being used is just as ignorant as if you were to claim that the law of
gravity doesn't apply to you. Now is there something about this
fundamental concept that you can't comprehend?

>> Blows the hell out of Twisty's excuses, doesn't it? LOL! <<<<<<are you

All the time Skipp? Are you a Ham? How would you know it is all the time
then?
I am sure some guys pump it up to 2 kw during a contest, other than that
power is not needed in the least, you think the avg ham is running more than
1.5 kw on uhf- Vhf I doubt it highly, so that leaves how many for hf, the
bands are quiet enough that a good antenna and a 100 watt rig you can talk
where ever you want to.

--
If you are implying that people, who
hold ham licenses, should be somehow
held to a higher moral standard than
the "common man", then that would
be faulty logic. A ham license is only
a "permit" to use radio, it is not a
"badge of morality".

> I can do exactly what you've posted,with my Collins.

Operating split is done all the time on the ham bands, many DX
stations transmit on one frequency and listen on another for
calls. In my Novice days, Novices class holders were required to
be crystal controlled. Very few Novices had more than one or two
crystals for a band. So you would transmit on your crystal
frequency and then scan the band to listen for another station
calling you because chances were that the other station did not
have the same crystal frequency as you, so you would be
transmitting on one frequency and copying the other station on
another. In those days most everyone used separate transmitters
and receivers as transceivers were far and few between.

and Ole Stuff posted:

> n key listen on another freq unless he would need a repeater to listen
> > > and talk on the 2 different freqs same time, same band etc etc

So what is all this stuff about needing a repeater?

Twistieboy, you really are a dumbass. I clearly stated that I was
not familiar with this antenna, and I stated that if it was like
most mobile antennas (which according to you in your infinite
knowledge it must not be) it would be rather narrow banded and
gave my advice based on that. You really need a class in reading
comprehension. Maybe you just need to learn to read.

To add to Aaron's post, I have been a ham for over 40 years and I
can say with certainty that yes, some hams do run more than the
legal limit at times (and yes, some have been cited in the past by
the FCC), but the majority of hams who own amplifiers do not.

I've got a couple hundred feet of coax laying in my shop that apparently doesn't exist. The jacket just says "Belden RG8U KX" I know it's RG8 stranded conductor but what does the "KX" mean? I did a quick search and got ZERO hits. Looking at Belden's website they make NO mention of the designation "KX" Anyone have a clue what this stuff is and what the specs on it are? Thanks for any help you can give.

Dave

There will be a few brain dead individuals, but consider this ... moonbounce has been done by a number of folks running under 100 watts. It isn't the size of the ship, it's the motion through the ocean.

Heck, at the risk of getting some panties in a knot, I have no problem talking to Australia or England using an HT on 440 - courtesy of a 10 meter port that only runs 100 watts erp. I used to talk to Norm, VK2NP, in Australia for hours on end, day after day, week after week, running only 100 watts to a TH6-DX beam. You don't need the power - except, perhaps, to just antagonize a few other folks.

Don't even humor that argument, JJ. They are just trying to validate
illegal behavior by saying, "If one ham breaks the rules then none of
them have cause for complaint". That argument is even more lame than
"Federal laws aren't laws", and HDT's Civil Disobedience.

A lie is a false statement deliberately presented as the truth. When
have I ever lied about anything? Because my viewpoint does not agree
with yours, does not qualify it as a "lie".

> Hell, I feel your
> pain. Go to google and look up "malcontents" and see who you stole that
> from. There's more.

I "stole" it from no one. I used a term that most accurately fits the
situation. You must really be full of yourself if you believe that you
influence anyone in a positive manner. Your grammatical skills are
sophomoric at best.

>
> >
>
> Are you somehow implying that you have exclusive rights to common

A quick Google search of my posts over the last 9 years will show that I
have been, and remain, consistent in grammatical context, and as frank
and honest in my knowlege and opinion.

> Oh yea, and that you borrow
> liberally from my *vernacular*.

Are you really so narcissistic?

> I was agreeing that the imitation is the
> sincerest form of flattery but you're too far gone and rabid to even
> realize when someone agrees with you.

Lot's of people agree with me. If you weren't so consumed with trying to find some flaw in my character, you'd realize that.

>

> agree with. Get personal, hurl some insults....that has been your
> history among us.

Hmm.... Lets' see, if you say something critical of a person, it's an "observation". If I, or someone else makes a similar statement about you, it's an "insult"? You really ought to learn the difference.

>
> And you're still a liar and a hypocrite. How much do you want shared

In the words of the great cornholio: "Are you threatening me?"

> I don't hold grudges,

Really? Your actions to date would seem to indicate otherwise.

> but if you want to wage another of your little adolescent games, bring it on.

Pot = Kettle = Black. You really should look in the mirror before you hit the keyboard.

> Do I have your permission to post some of your private emails that
> obviously weren't meant for me?

Let's see. Considering that I've had E-mail correspondence with maybe 3 or 4 people from this newsgroup in the last several years, I'm sure you have quite a lot of "dirt" to sling. I'm not one to make behind the scenes comments about anyone that I wouldn't say in the open forum. So go ahead hot-shot, let's see what wonderful fabrications you can dazzle us with.

> Maybe you should stick to shooting fish in a barrel. They are
> defenseless creatures and can't point out your whopper lies concerning
> all kinds of things, but I can.

Once again, you have trouble differentiating between a deliberate untruth, and a difference of opinion. You can't name one thing that I've ever said that qualifies as a "lie".

> How much do you want revealed? Getting
> personal is way off topic, but wre can take your spineless insults to
> email or you can continue to manifest your juvenile obsession with
> opposing views by using this board as your personal insult toy.

Funny, you seem to be the only person, who feels "insulted". Maybe you should lay off that estrogen therapy and get a little backbone, and some thicker skin. If the truth hurts, it's not my job to sugar coat it for you, the way mommy used to.

Where? Who has spoken? Name them? Name one person that disagrees that operating a CB radio in direct violation of FCC rules, is not breaking the law? A FEDERAL law, that carries fines and jail time, that take it well into the catergory of "criminal". Just ask that last guy who was led out of the courtroom in shackles, for his willful violations, whether he was treated any differently from any other criminal.

A poor attempt at redirecting the topic.

> Oh, to answer your question ..no one agrees
> with you that minor rule infractions makes one a criminal except your
> posse of hate and discontent (You, Frank, Dogie, and Lelnad), that makes
> YOUR view in the minority.

Who? You keep saying that no one agrees, but you won't (or more likely
can't) name them. And while it can be said that a speeding ticket, which
carries generally less than a $150 fine, could be considered a "minor"
crime, breaking a federal law, being fined thousands of dollars, and
seeing jail time, most certainly qualifies as a "criminal" offense.

> You must be missing posts again...try another
> server, as many have agreed with me concerning what makes a criminal,
> not you, and have said as much, even a licensed LEO.

Who? Where? When? You like to dig for dirt with Google, so dig up this
info. I'm sure you would be delighted to prove me wrong by backing up
your statement with some supporting evidence.

> Once again, your
> views are in the radical minority and man, let me tell you, someone (an
> upperclassman) out there has it in for you 'cause your info contradicts
> itself all over the place.

What is an "upperclassman"? I haven't used that term since I was in
school, and that was a LOOOOOONG time ago.

And what "info" contradicts itself? Once again you allude to something,
and infer another, but post nothing of substance to back it up.

> You must behave the same to hammies as you do
> here.

Well.... yea I do. I've got nothing to hide. I post 'em as I see 'em. If
you can't handle that, then I suggest you take up stamp collecting, and

stay off the internet.

> "Sandbagger"
> <<

Gee, I thought these were supposed to be "emails"? That post was posted by me on 11/01/1999, to the newsgroup.

That post was in response to a person, who had gave a reason why he didn't want to be a ham, because a call sign and all his associated information would become public knowledge. I countered that people who have nothing to hide, have nothing to fear.

I also made reference to the false comfort that relative anonyminity brings to many CBers. They (wrongly) think that just because they don't give out a call sign, and use a cryptic number or handle as an identifier, that a clever person could not find out a ton of information just by listening over a period of time (You know, listening. You should try it sometime). Many people unknowingly give out many clues to their identity during routine QSO's. This has been the subject of many courses

on protecting your family, and involves not only radio conversations, but exchanges over the internet as well. I gave a true life example of how it could be done, but you, in your ever twisted world, took it completely out of context. A post where I was advising someone to be careful of what they say, turns into "I'm spying on people".

If this is the best you can do, you'd better quit now. No one, with any sort of rational mind, would see this as anything other than it is, and not your warped interpretation of it.

> or you forgot about it.

That's EXACTLY how I FEEL about the situation. Ok, now listen carefully,
so you can hopefully understand this:

There's a difference between how I FEEL about something, and whether
it's illegal or not.

I've made the comment on more than one occasion that if you're
comfortable knowing what you are doing is illegal, and take steps to
minimize your exposure, then you have to live with your actions. Just

don't try to pawn it off on the rest of us as a perfectly legitimate activity, because the law says otherwise.

I don't even want to go into the concepts of "Intent" of the law, vs. the "letter" of the law, since you can't even keep the context of my postings intact.

> "That being said, I do not support protesting the 155 mile limit by

Again, what part of that is not true? The FCC set up the class D citizen's band as a short distance (I.E. local) communications service. Only malcontents and wannabe hams use it contrary to its intended purpose, and in violation of the law.

>
> >

> Hahahahahahaha! Dave can't grasp the concept...hahahah!\

Concept? Ok then, what is it? Logic dictates that if one has the choice between two radio services, one free of all licensing requirements, where you can work DX and play with radio, in violation of the law, and on one band, where the DX is subject to the 11 year sunspot cycle, or... A set of bands where one could find DX somewhere 24-7, as well as many other facets of radio, which requires a license and a test to demonstrate your abilities, the reason why someone would chose the first over the second basically boils down to two possibilities:

1. A completely social or psychological one. They don't "like" something about the second choice. Either they had trouble fitting in with others, or just didn't like the politics or the ideals of following the rules.

2. An inability to pass the associated test material to qualify for a license. People in this catergory may tend to denigrate the service, the "relativity" of the material, or question the "worthiness" of others who have passed their tests.

To be honest, I wouldn't want either type on ham radio. Let them stay on CB, and try to tell the rest of the world that being illegal is a proud tradition.

The moron who has been calling himself Aaron H. Voobner is none other
than Woodbury McCrea Parr of Cornelia, Georgia. Woodbury has a
long-long history of running high powered illegal amps on CB and is a
known well established pirate Operator who has used many alias's,
Radio Bob, Radio 8, Fight for Free Radio, Voice of Shakerag (a station
that advocates illegal use of drugs) and more false names and email
addresses than even I could conjure up.

Woodbury McCrea Parr has many blind mail boxes and addresses but his
real address is 174 Red Fox Hollow in Cornelia, Georgia 30531. His
Ham Call sign is KE4ENX. For some reason he thinks this poor guy in
Virginia Beach is his tormenter and has falsely accused him of being
exactly what Voobner/Parr/Bob is, an illegal pirate operator. Classic
case of Manic Depressive and in fact Woodbury has been treated for
mental disorders since his last mental breakdown in the early 90's
when he left his wife and family in Decatur, Georgia. Woodbury thinks
everyone is out to get him and wages these childish, inane hate
campaigns at people he "thinks", or has "heard" are after him. His
latest target, Steve Rogowich is not only not a pirate, he doesn't
even know who Woodbury is.

Call Woodbury McCrea Parr at home at 706-776-1290 and tell him to
stop. Its only exposing himself to further humiliation and public
embarassment. He has hissy fits about so called illegal CB operators,
all the while he is one himself. He huffs-n-puffs about illegal
operators, yet has been a long time pirate operator on shortwave. If
Woodbury doesn't answer but his wife Patricia does, tell her that he

must take his medication or this insanity will continue until he makes another mess like he did just 10-years ago.

Poor Woodbury was thrown off his ISP in Cleveland, Georgia for making threats and then thrown off of Hotmail for threatening a woman he didn't even know and now he's here on USENET making false claims about other people that he doesn't even know being pirates.

Who cares Woodbury/Voobner? Do you not have a life? Is this the best you can do? Just keep posting the same old lies and bullshit you've been hawking for the past couple of years? You are a powerless, pitiful failure and the only thing you can do is post this bullshit all over the USENET.

We know who you are. We know where you are. Why keep egging people on to expose your deepest and darkest secrets for the entire world to see? Is it the "self destructive" bent that your therapist warned you about? You have only proven that you are a powerless little man who can only throw rocks from the shadows. You profess to be a follower of the Urantia Book, yet you practice none of what you claim to believe. We all know who you are. Why not post something relevant in these forums that has something to do with the topics instead of making false personal attacks against people you don't even know? What a sad little man you are to sit in a dark room and the only time you think you are worth something, is when you type attacks against people you don't have the courage to face with your lies. For years you worked so hard to hide your real identity behind that Lula address and now everyone, everywhere int he world knows who you are. Find another hobby, you've failed at this one too.

> So take it and shove it up your ass fool

That is just plain wrong. The citizen's band requires the use of type accepted equipment, in order to be legal. A modified ham radio is not legal on CB no matter what power level you run it at.

No whether or not anyone would actually notice it if you kept the power down, is another issue.

Keep waiting then George, 'cause my claim that is was decriminalized was proven. You are confusing me with another.

--
>And my point that it is Illegal has been validated time and time again.
<<

Yea, but see, I never took issue with that comment. You merely claimed I said it when in fact I didn't.

>In fact I did bring this to light in an earlier post I think you jumped in to the thread when I was talking to "tools" who said it was Legal, and to this day I maintian it is indeed ILLEGAL. You say decriminalized, for mere possesion and you are correct for anything under 28.5 and not in a school zone anything else regarding it has not been decriminalized even with that big fancy word it is still Illegal. we are arguing semantics. You cannot say I am wrong or I lied how can I lie by saying it is Illegal that is the truth.<

You claimed "I" said it was illegal when in fact I didn't. You're right, we understand each other and agree (did I say that?) on the law there. The law concerning the school zone surprised me. Some states have mandtory minimums for that and any possession is a felony (within "X' amount of distance from a school).

Well they can spin it any way they want, but the vast majority of
hams operate completely within the rules. Timmie Neebonehead and
Twistieboy can't say that about 'freebanders' as all 'freebanders'
are operating illegally.

Twistedhed wrote:
From: nojunk_n3cvj@worldlynx.net (Dave Hall)
Twistedhed wrote:
>Wow! I actually did make that comment, <

Yea, and you have insulted as often as I have claimed you do, too. And lied.

>A lie is a false statement deliberately presented as the truth. When have I ever lied about anything? <

Let's begin with the most recent...you claimed you never spied on people....said why "exert the effort"? Then a post was showed where you not only claimed you did it, but took delight in it. If you missed that post I can show it you.
There are way more, but I'm not into gloating.
It's simple, treat those as you wish to be treated.

>Because my viewpoint does not agree with yours, does not qualify it as a "lie".<

No. When your viewpoint doesn't agree with mine, you begin a failed attempt at a redirect with insultive remarks in an effort to make the topic about the poster that made the statement you do not agree with. Hell, Dave, the majority of your posts contain some type of offcuff remarks, but as I said, you have been doing better since made aware of it.

>Hell, I feel your
pain. Go to google and look up "malcontents" and see who you stole that from. There's more.
<

But you accused someone else of doing damn near the same thing to you...did you forget already? go back and reread that thread and see who started commenting about such things....it was you.
Once again, what makes your view so important that others should abdicate theirs in favor of yours?

>I "stole" it from no one. I used a term that most accurately fits the situation. You must really be full of yourself if you believe that you influence anyone in a positive manner. Your grammatical skills are sophomoric at best. <

Another personal and off-topic, off the cuff remark from you. You do it so often you don't even realize it.

Did you miss the post last year where Sparky claimed he couldn't follow? He took issue with my vernacular, with words such as "ascertain". I don't mind, if I have to reduce my posts to a sophomoric level in order for you and he to comprehend them, so be it.

>Are you somehow implying that you have exclusive rights to common English vernacular?<

It has never been my goal to imply anything.

"Nooooooope! I'm claiming that since I arrived your behavior has improved and so has your grammar, tremendously."

>A quick Google search of my posts over the last 9 years will show that I have been, and remain, consistent in grammatical context, and as frank and honest in my knowlege and opinion."<

And heavily insultive to those that make valid points that you take issue with. Correct, google is full of those types from you conerning your well-known intolerance for others, mainly any cber that makes a point you disagree with.....if you didn't make such remarks, "Aaron" wouldn't have included you by name in his posse of hate with Frank Gilliland, N8WWM Dogie Adair and Lelnad KC8LDO.

Oh yea, and that you borrow
liberally from my *vernacular*.

>Are you really so narcissistic? <

You made the claim first. I simply pointed out how you hypocritically did it to another. A shining example of how you can dish it out but not take it when someone hands it back.
I was agreeing that the imitation is the sincerest form of flattery but you're too far gone and rabid to even realize when someone agrees with you.

>Lot's of people agree with me. If you weren't so consumed with trying to find some flaw in my character, you'd realize that.<<

I'm not the least bit interested in your character. As far as I'm concerned, your "character" is on par with the others, which is why you were thoughtfully included by name by "Aaron".
Those 3 do not make "lots", despite your "sophomoric" beliefs.

>Your lack of comprehension is exceeded only by your absurdity, and is as true to form as ever.
<

And you are right on schedule....attack the person whose view you don't agree with. Get personal, hurl some insults....that has been your history among us.

>Hmm.... Lets' see, if you say something critical of a person, it's an "observation". <

Putting words in my mouh has embarrassed you before, who try again at something you have always failed at?

>If I, or someone else makes a similar statement about you, it's an "insult"? You really ought to learn the difference.<

Obviously, you are beholden to personal insult and this is a hilarious way of watching you try to defend your moronic actions of insulting one on a personal nature. If I have ever, EVER insulted anyone on this board, it was a return insult to someone, not unlike yourself, that has thrown the first stone in all cases of dialog with someone..

And you're still a liar and a hypocrite. How much do you want shared with the group, Hall?

>In the words of the great cornholio: "Are you threatening me?" <<

Let me borrow a phrase from you..."If you have nothing to hide, what are you worried about?"
You apparently did take my advice and went through google and found some of those whoppers you made that you'd rather forget. If you wish to construe that posting your posts to prove you a liar is a threat, you need help.

>I don't hold grudges, <

>Really? Your actions to date would seem to indicate otherwise.<

Example? (2nd time)

but if you want to wage another of your little adolescent games, bring it on.

>Pot = Kettle = Black. You really should look in the mirror before you hit the keyboard. <

I'm not the one that admitted taking pleasure with anothers dilemma. You are.
Difference between you and I is I am full of joy, you are full of malice. I like what I see in the mirror, you have a wounded and battered ego and as admitted, need to feed off thers in order to feel "good" about yourself.

Do I have your permission to post some of your private emails that obviously weren't meant for me?

>Let's see. Considering that I've had E-mail correspondence with maybe 3 or 4 people from this newsgroup in the last several years, I'm sure you have quite a lot of "dirt" to sling. I'm not one to make behind the scenes comments about anyone that I wouldn't say in the open forum. So go ahead hot-shot, let's see what wonderful fabrications you can dazzle us with.
<

All in due time, but I shal retain your permission to post them publically...but I'm letting you know now, they ain't pretty, small

squirt. As a matter of fact, many of them show your lies you are so inclined to deny.
  Maybe you should stick to shooting fish in a barrel. They are defenseless creatures and can't point out your whopper lies concerning all kinds of things, but I can.

>Once again, you have trouble differentiating between a deliberate untruth, and a difference of opinion. You can't name one thing that I've ever said that qualifies as a "lie".<

Check your comments on spying on cbers. Miss that post?

How much do you want revealed? Getting
personal is way off topic, but wre can take your spineless insults to email or you can continue to manifest your juvenile obsession with opposing views by using this board as your personal insult toy.

>Funny, you seem to be the only person, who feels "insulted".<

Funny? First you take delight in making others feel bad then you claim your insults are funny? No wonder you are are a part-time father. I hope your daughter learns her P's and Q's from her mother, as she obviously has seen you for what you are. She's the bright one here.

> Maybe you should lay off that estrogen therapy and get a little backbone, and some thicker skin. If the truth hurts, it's not my job to sugar coat it for you, the way mommy used to.
Dave
"Sandbagger" <

Truth? What truth do you find through calling names and making others feel miserable? A therapist will assure you that for you to feel "good" only by making another feel bad, is a deep rooted resentment that has nothing to do with the person you are accosting. I still think it came from the physical abuse you suffered and admitted to at the hands of your grandfather, but there are more issues you have to work on..

Twistieboy is just hacked because he knows he could never pass the
amateur radio nocode test. He is doomed to 'freeband' illegally
forever.

where the trouble originates. Add to that, most present do not share Hall's radical views of what constitutes a criminal and well, there you have it...a majority.
--
Where? Who has spoken? Name them? Name one person that disagrees that operating a CB radio in direct violation of FCC rules, is not breaking the law? A FEDERAL law, that carries fines and jail time, that take it well into the catergory of "criminal".
--
Missing posts or deliberately ignoring them?
Well, a LEO just admitted as much, and you claimed "lots" agree with you. I pose your question to yourself (don't you just HATE that?) and ask where are the cbers present that consider those who talk on the freeband, an extra watt or so, or drivng 55 in a 56 a criminal? The majority here do not consider those acts criminal. You are in the minority on that, Hall. Deal with it. You have no support (at least publicly) except the hate posse of Dogie N8WWM, KC8LDO Lelnad, and Frank Gilliland, which is why you were so readily named by "arron".You are part of the problem on rec.radio.cb.

> Just ask that last guy who was led out of the courtroom in shackles, for his willful violations, whether he was treated any differently from any other criminal.
Dave
"Sandbagger"
<

Just ask the hammie in California who was doing the same thing only on emergency freqs. Once again, you invalidate your own pointless efforts by naming the rare exceptions to the rule. I would rather ask why you spy on cbers then lie about it.

But yet twistieboy keeps insisting that others post their calls
here to prove who they are yet you don't see him volunteering his
real name or address.
His excuse for not being a ham is because he can't pass the nocode
test.

Actually, when I was in my younger wilder days I had a AM only radio that
had extra channels in it, so it can be done.
But I would advise against it.

Source record: 140189

A first-grade teacher was having trouble with one of her students. The teacher asked, "David, what is your problem?"
David answered, "I'm too smart for the first-grade. My brother is in the third-grade and I'm smarter than he is! I think I should be in the third-grade too!"
The teacher had enough. She took David to the principal's office. While David waited in the outer office, the teacher explained to the principal what the situation was. The principal told the teacher he would give the boy a test and if he failed to answer any of his questions he was to go back to the first-grade and behave. The teacher agreed.
David was brought in and the conditions were explained to him and he agreed
to take the test.
Principal: "What is 3 x 3?"
David: "9"
Principal: "What is 6 x 6?"
David: "36"
And so it went with every question the principal thought a third-grade should know. The principal looks at the teacher and tells her, "I think David can go to the third-grade."
The teacher says to the principal, "Let me ask him some questions?" The principal and David both agree.
Teacher: "What does a cow have four of that I have only two of?
David: "Legs"
Teacher: "What is in your pants that you have but I do not have?" (The principal wondered, why does she ask such a question!)
David: "Pockets"
Teacher: "What does a dog do that a man steps into?"
David: "Pants"
Teacher: "What starts with a C and ends with a T, is hairy, oval, delicious
and contains thin whitish liquid?"
(The principal's eyes open really wide and before he could stop the answer...)
David: "Coconut"
Teacher: "What goes in hard and pink then comes out soft and sticky?"
David: "Bubblegum"
Teacher: "What does a man do standing up, a woman do sitting down and a dog
do on three legs?"
(The principal's eyes open really wide and before he could stop the answer...)
David: "Shake hands"
Teacher: "Now I will ask some 'Who am I' sort of questions, okay?"

David: "Yup"
Teacher: "You stick your poles inside me. You tie me down to get me up. I get wet before you do."
David: "Tent"
Teacher: "A finger goes in me. You fiddle with me when you're bored. The best man always has me first." (Principal was looking restless and bit tense)
David: "Wedding Ring"
Teacher: "I come in many sizes. When I'm not well, I drip. When you blow me, you feel good."
David: "Nose"
Teacher: "I have a stiff shaft. My tip penetrates. I come with a quiver."
David: "Arrow"
Teacher: "What word starts with an 'F' and ends in 'K' that means a lot of excitement?"
David: "Fire truck"
The principal breathed a sigh of relief and told the teacher, "Put his ass in the fifth-grade, I got the last ten questions wrong myself."

Pick your minds up out of the gutter

Gorge wrote:Ok Twist without making this long and drawn out I think we have been arguing semantics, you claimed mere possesion, and of course thats all you claimed you did not specify any quantity. i claimed It is illegal I also did not specify anything in particular such as possesion sale growing etc. So anything other than possesion is Illegal would you agree with that scenario, even if you didn't the law is what it is and really even under 28.5g is Illegal, you say "decriminalized" call it what you want you but you cannot fire up a joint in public without some repercussions call it a misdemeanor or what have you it is still considered Illegal.
<

Agreed.

> You guys like to refer to it like a traffic ticket, well is speeding allowed, left on red? racing? etc the answer is No, it is illegal to speed what happens if caught? You are punished, fined what have you. Ok here is the best part Sale of marijuana is *more* Illegal than possesion jail time, growing it is Illegal, so where did you get yours? Someone probably had to sell it to you right? then you helped them comit a felony. <<

I don't burn anymore. I toked some in college and plenty in high school....it's been many moons and if I did it now I would probably sleep for 2 days or eat myself sick, based on the stuff that I read and learn of todays pot. Back then we had Columbian Gold and Panama Red. A quarter pound was around 75 bucks and green was garbage (except for the Hawaii Kona stuff). When I read that in some places the price is higher than gold per ounce...I just shake my head.

>twist I am not against marijuana at all I am just pointing out it is not just something that can be done when and where you want without repercusisons. Posses marijuana in a school zone that fits your classic *mere possesion* but yet that is also illegal and highly illegal in many states enough to warrant possible mandatory jail time. So you see I think me saying it is illegal makes me in fact still correct because it is , you said mere possesion was decriminalized I can agree with that without getting into specifics. Just because it is decriminalized doesn't mean it is not in fact still Illegal. Have your rebuttal and i am done with this thread <<

No problem. We pretty much come to an understanding on this one......I'm not against it either. As I said, an adult should be able to intoxicate himself anyway he chooses, from a wild weed to a pill to a can of paint.

Dave
"Sandbagger"
-
Here's dave talking about the "identity game" preferred by Frank,
Lelnad, and himself.

>This "Identity Paranoia" seem very prevelant on the CB band. I've
always chalked it up to the fact that most people run illegally in one
respect or another, and have a need to "hide behind the mike", to make
any law enforcement action that much tougher.
The real irony is that despite the steps that people take to "hide"
themselves, a clever "sandbagger", can gather tons of information from
just listening to conversations. I've listened to people, and just from
their casual comments, I figured out where they worked, how many kids
they have, how old they are, the general area that they live in (And
simple DFing would narrow it down from there), they type of cars they
drive, the make and models of their radio gear (And whether it's
illegal) and so on. You don't have to announce your name and address for
people, intent on finding you, to track you down. Dave "Sandbagger"
<<

>Gee, I thought these were supposed to be "emails"? That post was posted
by me on 11/01/1999, to the newsgroup.<<

Whatever and whenever. I received it in email. Regardless where it came
from and when you said it, it illustrates you are a liar.

>That post was in response to a person, who had gave a reason why he
didn't want to be a ham, because a call sign and all his associated
information would become public knowledge. I countered that people who
have nothing to hide, have nothing to fear. <<

Hey, it ain't me you have to clean up your lies to. You said you never
claimed such actions, yet here is the post where you did it.

>I also made reference to the false comfort that relative anonyminity
brings to many CBers.<

Is that why you posted under different names, because you think no one
can recognize they came from you?

> They (wrongly) think that just because they don't give out a call sign, and use a cryptic number or handle as an identifier, that a clever person could not find out a ton of information just by listening over a period of time (You know, listening. You should try it sometime). <<

Nah...I'm not the slightest bit interested in personal info on strangers on the radios. I have a life that takes the place of such delights.

>Many people unknowingly give out many clues to their identity during routine QSO's. This has been the subject of many courses on protecting your family, and involves not only radio conversations, but exchanges over the internet as well. I gave a true life example of how it could be done, but you, in your ever twisted world, took it completely out of context.<

Not at all. The gist of what I said is that you are so interested in other's lives that you
devoted an entire topic to it.
You denied it, and as always, need reminded because you always seem to "forget" about the posts you made.

> A post where I was advising someone to be careful of what they say, turns into "I'm spying on people". <

No, a post where you admitted doing it is in direct contradiction with your denial that you NEVER did it. "Why" is an afterthought and nonrelated.

>If this is the best you can do, you'd better quit now. <

I can do way better, but that's not what I'm about. But like I said, if you wish to keep hurling childish insults my way, or keep lying, more of your own words will come back to haunt you.

>No one, with any sort of rational mind, would see this as anything other than it is, and not your warped interpretation of it.
Dave
"Sandbagger"<

Agreed. Your denial that you ever said it or did it is proof in the pudding.....hell, Dave, I agree.....no one needs my interpretation of it, I just point these things out...just your denial that you never said it or did it then your attempt at explaining WHY you did it is enough for any rational mind.

Oh yeah? I bet it would have a wonderful 60hz hum too! Those things DON'T work at 100% duty cycle, more like 10%. There is NO WAY that you would get an acceptable signal from a magnitron. You also don't need 1kW at 24GHz. Two way EME (Moon bounce) has been done on less than 10 watts. Yep that's TEN watts. It all comes down to the antenna. If you can get 60db of gain (easily done at 24GHz) with 10 watts that's 10 megawatts ERP and perfectly legal.

But, do hams use more than the legal power? Sure there are lots of them who do. Why? You got me there! I've worked every continent in the world on less than 5 watts. But then there's been times that I couldn't talk into the next county on 1kw.

Twistedhed wrote:
Or how about this little hypocrisy, Dave?
-
"I agree with your assessment and attitude WRT the CB radio situation.
Human nature, such that it is, tells us that if you give someone an
attitude, they will likely not pay much attention to what it is you're
trying to say, good or bad. "

>Yea so? And your point is?
<

Self-contradictory. You claimed it gave you pleasure just the other day.
You're on such a downhill spiral that even us lowly cbers feel sorry
for.

>What did I claim pleasure for?<

Taking delight in anothers dilemma.
Now that's sick and antisocial.

>"This also illustrates my point about "intent" of the law vs. the
"letter" of the law.
I, personally, don't have a problem with someone who keeps a low
profile, runs equipment that is clean, and at modest power levels, and
is considerate of the rights of other operators.If that means that same
operator occasionally escapes to a "freeband" channel or bumps up the
power a few watts to maintain contact with their base/mobile, over
adverse conditions, then so be it."
<

That's Dave Hall...hypocrite galore.
Whatsamatter Dave, having problems deciding just exactly how you feel
about these criminals or do you change your mind to suit the thread
you're trolling? Of course, you can always claim you didn't remebber it,
or you forgot about it.

>That's EXACTLY how I FEEL about the situation. Ok, now listen
carefully, so you can hopefully understand this:
There's a difference between how I FEEL about something, and whether
it's illegal or not.<

Now you are beginning to understand why
your opinion carries no weight here.

>I've made the comment on more than one occasion that if you're
comfortable knowing what you are doing is illegal, and take steps to

minimize your exposure, then you have to live with your actions. Just don't try to pawn it off on the rest of us as a perfectly legitimate activity, because the law says otherwise.<<

And that is exactly what I have always maintained since the Sporadic days. My posts have echoed that sentiment for years,yet you call me antisocial for those same beliefs. That makes you "hypocrite Hall". The catch here, is nobody "pawns" anything,,,you angry hammies that can't control your emotive responses ASK for our opinion, and the second you receive it, commence to claiming we are "pawning it off" as a legal activity. You're rapidly reaching and falling with each post, Dave. I have never set forth any such thing to justify anything to anyone,,,,,just more bullshit from you.

>I don't even want to go into the concepts of "Intent" of the law, vs. the "letter" of the law, since you can't even keep the context of my postings intact. <

You're the one that can't remember what you said from day to day. Common among liars.

"That being said, I do not support protesting the 155 mile limit by deliberately engaging in skip talking. Talking skip is the primary cause of the noise levels and interference that hamper the ability of locals to communicate with their respective friends and family. It goes with "respecting the rights of other operators". Skip talkers are not being considerate (or even cognizant in many cases) of the potential interference"

There is that magic word..."potential"...sorta like the word "if", eh?

>But what part of that is not true?<

Well, you must have forgot what you claimed again. In another post of yours, you claimed that amps were the main reason....now you're claiming it's skip. BOTH posts can't be correct, Hall. Make up your mind before you forget again.

>that their activity can cause to people that are not even in the same area.
Since the intended purpose of CB radio was short distance LOCAL communications, the 155 mile limit is reasonable in that vein, even if the frequency band is not always conducive to only local communications. I've always favored moving the CB band to somewhere in the VHF spectrum, where skip would be a rarity, and that whole piece of the equation would be effectively removed."
<

And since things aren't as you like them you figured you would just come in here and lie like hell, contradict yourself, and spread calamity while getting your tongue cut a few times by those that you mistakenly thought you were above.

>Again, what part of that is not true? <

And once again I will enlighten you......you claimed that the MAIN reason above, is skip. In another post, you claimed it was amps. In yet still another, you claimed it was a reflection of society that ignored ALL rules that was responsible......(giggle)...you really ought to pick a story and stick to it.

>The FCC set up the class D citizen's band as a short distance (I.E. local) communications service. Only malcontents and wannabe hams use it contrary to its intended purpose, and in violation of the law.
As for recruiting CBers to the ham radio fraternity, my attitude is this: Most CBers, that are serious enough about radio that they are running on the freeband, are undoubtedly aware of the existance of ham radio. If they already know about it, they are either interested in it or not. If not, it most likely has to do with preconceived notions about ham "attitude" (Stuffed shirts)." <

Hahahahahahaha! Dave can't grasp the concept...hahahah!\

>Concept? Ok then, what is it? <

The concept that you edited out where you admitted you can't comprehend why more don't gravitate to hammie radio.............it's because of the likes of you. Youblacken the eye of hammie radio alongwith people like N8WWM, Frank Gilliland, and KC8LDO Lelnad.......all named by "arron" as part of his hate and discontent posse on rec.radio.cb
You also claimed that it was difficult to operate correctly....but you edited out that part as well, especially the part where I agreed, claiming it is of little wonder that you find correct operation difficult. It also solidifies my comments on the irony concerning the lack of communication skills among a few angry hammies such as yourself. At least you recognied it.

>Logic dictates <

Whoa whoa,,,, the logic that you and Lelnad KC8LDO and Frank Gilliland and N8 subscribe to is nothing but a common belief shared among your posse of trouble.. Lelnad KC8LDO said so. Did you miss that post too, or just "forget" about it?

>that if one has the choice between two radio services, one free of all licensing requirements, where you can work DX and play with radio, in violation of the law, and on one band, where the DX is subject to the 11 year sunspot cycle, or... A set of bands where one could find DX somewhere 24-7, as well as many other facets of radio, which requires a license and a test to demonstrate your abilities, the reason why someone would chose the first over the second basically boils down to two possibilities: <

You mean in your limted intellect, YOU could only recognize 2 possibilities. I told you before and I'l tell you again....your ignorance isn't shared by all and you underestimate the intelligence of the cbers here.

>1. An inability to pass the associated test material to qualify for a license. People in this catergory may tend to denigrate the service, the "relativity" of the material, or question the "worthiness" of others who have passed their tests.<

Maybe. But you have a personal problem and are trying like hell to make it anothers. I have never denigrated hammie radio.

>To be honest, I wouldn't want either type on ham radio.<

To be honest, many hammies don't want your type on hammie radio. You are the epitome of what plagues it......intentional division.

> Let them stay on CB, <

AS I said....division.

>and try to tell the rest of the world that being illegal is a proud tradition. <

Go ahead and rant......it doesn't apply at all to me, but since you selected me as your target with everything that doesn't even apply,, I'm all ears if it helps you with your antisocial and deviant behavior that is responsible for your behavior unbcoming of an upperclassmen (hammie other than nocode).

>"I make an effort to try to enlighten the person," <

With lies, deliberate disinformation and plain old bullshit.

"but if he's set in his ways, I let it drop".

You wouldn't still be trying to hump my leg if that post had an ounce of integrity. But as you have shown quite well, none of your posts do.

>Because you're the newsgroup punch clown.<

Now I am responsible for your posts not having integrity? I suppose I am, partly, by casting a light on your lies that you have posted and conveniently "forget".

>I'm having my fill of you for now. then I will return to ignoring you completely, next week.
Dave
"Sandbagger"<<

Does this mean you won't be posting at all anymore except under your own name?

I was wondering if anybody had advice on putting a antenna
in a attic. Not sure how good this would work or what kind of antenna would be
the best to use. I have been using a no-ground antenna on my apt's balcony and
that worked "ok" how would that work inside a attic? also how much will the
A/C ducts interfere with this as they are metalic. As this is a brand new
house I would rather not put any holes in the roof or drill holes anywhere
outside it to attach anything yet.

thanks for any advice
spj67@eudoramail.com

Only in very beginning, long before you were ever on this newsgroup, I "borrowed" an account from a local university. That was back around 1995 or 96, before i had my own ISP. Ever since then I have ALWAYS used this account that you see here. I have never used a deliberate phoney account for the purposes of deceiving anyone, or projecting an image that I would be ashamed of under my real name.

You see, the one thing that sets me apart from many of your other detractors, is that I'm not afraid to stand behind my words, no matter how many times you twist, distort or take them out of context. I don't have to hide behind a phoney name to call attention to your comprehensive deficiencies. I'll do it straight up right here and now.

That is likely, as demonstrated by his continual denigration of people
who have passed even the no-code test. Denigration of another's
achievements is far easier for an underachiever, than admitting one's
own faults.

The problem is that YOU continue to equate the FEDERAL CRIME, of illegal
radio use (Which carries stiff fines and possible jail time) with a
"trivial" summary offense such as speeding. These may seem, to you, to
be in the same catergory on the grand morality scale, but I assure you
that the Feds don't see it the same way.

> The majority here do not consider those acts criminal.

And you still fail to name anyone that does not consider operating an
illegal 11 meter setup to be a federal crime. Most are at least
intellectually honest enough to admit what they are doing is criminal,
and just take their chances. You, on the other hand, live in some
delusional dream world, and deny it.

> You are in the

I was here long before you ever came on board. And I'll be here long
after you leave. I will still answer any and all technical questions
that may be posed, as well as those few from people who still don't
understand where the line between legal and illegal runs.

>

> by naming the rare exceptions to the rule.

The fact that the feds do not prosecute everyone who runs illegally does not negate the law. The feds are severely undermanned, and many people (yourself included) have enjoyed your freedom from prosecution. But the fact still remains that those who pushed the envelope a little too far found out just how much of a crime illegal radio operation really is.

It only takes one exception to invalidate a premise. And your premise is that illegal operation is not a crime. Those high profile federal cases are all the proof anyone needs to see how wrong you are.

No, but operating a radio in violation of FCC rules IS criminal. The
only thing is that you might get away with it for a while. But if/when
you're caught, you will indeed find out what it feels like to be a
criminal.

I taught before and after restructuring moron. The ham radio club
I was a member of sponsored the classes, I quit because I moved
from the area. Care to join me in a little 20+ wpm cw twistieboy?
Too bad you can't even pass the nocode test.

In what way? There's a BIG difference between casual listening to
conversations over a PUBLIC forum, and deliberately gathering personal
information to use against someone, which is the definition of spying.
In your context, I could accuse you of spying for all the google
excerpts that you put together on me. It's the same thing. But I
wouldn't expect you to understand the subtle distiction. You just can't
seem to grasp concepts. Maybe that's the fault of that lousy newsreader
you use. The one that quotes so poorly, and chops paragraphs and mixes
in passages from other people. No wonder you don't know who said what

half the time.

So NO, I don't SPY on people.

That proves nothing. Only that people should be more careful of what
they say over the air.

>
> >I also made reference to the false comfort that relative anonyminity

I NEVER posted under a different name. Even when I was using a
university account 7 years ago, I still signed my name. This allegation
really has shown the depth of your paranoia.

No, but you seem to live to gather up all sorts of info on people over
usenet. I find it somewhat frightening that you remember a post that I
made two years ago. I'm sorry, but nothing that I've said here is so
important that I memorize each post word for word. And I especially
don't remember things that you have said. It's just not that important
to me.

> other's lives that you
> devoted an entire topic to it.

I did not "devote" an entire topic to it. I responded to another's inquiries, and cited an example of how he should not feel so comfortable in his relative anonymity. How you could equate that with "spying" is a stretch. But I've come to expect that from you. The king of obfuscation. Feel free to add that to your "vernacular".

> You denied it, and as always, need reminded because you always seem to
> "forget" about the posts you made.

Of course, because what you said wasn't true.

>
> > A post where I was advising someone to be careful of what they say,
> turns into "I'm spying on people". <
>
> No, a post where you admitted doing it is in direct contradiction with
> your denial that you NEVER did it.

I never spied on people. I never went out of my way to find out anything more than what they told the whole world on the public airwaves.

Once again, you reach, but you just can't grab the brass ring. Keep on trying though. Sooner or later you might find something.....

I find it interesting that you devote so much time to finding out information that you hope will discredit me. The mere fact that you are doing this tells me that you consider me credible enough to cause you to go through this effort on your little crusade. Something I've said has touched a nerve in you, and that's made you feel uncomfortable.

If you truly felt the same way about me, that I do about you, I'd just go on and let you babble in the wind, being careful not to be downwind from your spittle......

Slice it and dice it anyway you want twistieboy, but EVERY
'freebander' is operating illegally.

Where does the FCC claim that hams by the thousand are operating
illegally? Even so, the MAJORITY of hams operate legally.

> You claiming you are a hammie
> means nothing, and the amount of time you claim means even less.

You claiming you are a cber means nothing and the amount of time
you claim means even less. At least I do hold a license, something
you can't seem to accomplish.

> It's
> what you're about, not how much time you put in. I doubt both your

You're right, your opinion counts for nothing more than anyone
else's. You're not a looooowly cber twistieboy, that is an insult
to cbers. You are an illegal 'freebander', not worthy to be called
a cber.

I don't operate illegally twistieboy, can you say that? Why is
that not a surprise to the majority of this group?

Even if there were 7000 hams running power over the legal limit,
that is only approximately 1% of the licensed hams. Whereas 100%
of all 'freebanders' are running illegal power as 'freebanders'
are not legally authorized to run any power on the so called
freeband frequencies.

I have a Pride 100 and most people don't have anything nice to say about.
It works for me, i had to add a negative feedback kit so it would'nt
(latch-on)
but other than that i get lots of flowers.
It does'nt like a high dead key or a lot of swing as distortion quickly sets
in.
I believe it would be perfectly happy hooked up to a stock CB radio.

re: Pride DX-300 A single 4cx250b tube, amateur amplifier

Hi Dino,

I have a Pride DX-300 myself... it's a nice amp. I would say yes, it is a nice amplifier. When operated properly, it's a very clean amplifier. It was made for the consumer market so its a pretty well built unit; probably one of the best of that type/era.

Has a single grid driven 4cx250b tube on board... does a very clean 300 plus dead carrier watts out with about 4 watts drive. Band switches many of the popular pre warc (warc = new ham bands) bands and has a receive selectable preamplifier.

From the technical side, the only major short comming that I know about is excessive heater voltage on the tube. This higher voltage will dramaticly reduce the life of the tube... A resistor needs to be placed in series to drop the excess heater voltage. There are some other standard upgrades I do to most amplifiers I repair... proper parasitic and glitch protection.

OK, enjoy if you get one... I have seen RF Parts selling manuals for the DX-300, don't know if its the same as my pride dx-300 amp, nor do I think they built it. My original pride manual says nothing about RF Parts. Probably someone trying to make a buck reselling manuals and books.

Hope that helps...
cheers
skipp
